Men born to freedom are naturally alert to repel invasion of their liberty by evil-minded rulers. The greatest dangers to liberty lurk in insidious encroachment by men of zeal, well-meaning but without understanding." -- Justice Brandeis

That's a hard-fought contest, consider the abundance of third-rate
wanna-be comics giggling at their own jokes in innumerable morning
zoos, but I think we now have a winner.

>From the Houston Chronicle's Hurricane Rita blog (fair use excerpt
from http://blogs.chron.com/rita/archives/2005/09/nothing_new_in.html),
as Hurricane Rita approaches the Gulf Coast:

> On 6:30 p.m. on KRBE, 104.1 FM, DJ Carson had this sage newscast:
> "Nothing really new to report."
>
> What?
>
> He did manage to take a call from a listener, let's call him Capt.
> Obvious, who informed him that, "This whole thing (Hurricane Rita)
> is a bad deal."
>
> Thank you, KRBE, for your insightful report. At least the 50 Cent
> song that followed told me to "Put my back into it," which could
> come in handy should packs of bottled water need to be moved.

Radio is better off without the current crop of DJs if they're
mostly like that. Bring on the voice tracks!

On the good side, listening to KTRH's webcast is radio at its best.
Too bad it takes a Category 3 hurricane for radio to do the kind of
public service it should be doing every day. Oh, I forgot, it
doesn't test well in focus groups.

Radio stations are teaming up with car dealers and Cars 4 Christmas not for profit to provide free basic transportation to hurricane evacuees.Assistance from Entercom Radio, Journal broadcasting, O'Reilly Auto Parts, BP Gas, Manheim Auto Auctions,  Automotive Magazines, and many automotive businesses in the midwest have been provided to help with this unique charitable event.
We all know about the devastation the hurricanes in the gulf coast and its effects on displaced victims. Many organizations are helping with food, clothing, housing, and cash to restart their lives.  Without transportation, this can still be a very difficult process.
Cars 4 Christmas has a mission and with your help we can make a huge difference in helping these people with basic transportation to start helping themselves.

Cars 4 Christmas, Inc. is a 501 C-3 Not-for-profit organization that provides free basic transportation to less fortunate individuals through donations from the public and automotive related businesses. Since 1996, we have helped hundreds of people get their lives restarted by providing reliable transportation to those in need.We are experienced in finding the people that cars will help the most.

Our goal is to fill transports with cars and deliver them to refugees relocated in the Midwest and in your community.  We can provide a mechanically sound, safety inspected vehicle to someone in need for $500 to $1000 dollars, and we are the only Charity in the nation providing this type of assistance for free.
Cars 4 Christmas could use the radio industrys help in getting the word our about our project. Contact us if you have a interest.

You're attempting to post a graphics file to rec.radio.broadcasting. and rec.radio.misc. I moderate r.r.b, and I don't push through posts in HTML or containing attachments or binaries. I'd have emailed you this message, but you posted with an unusable e-mail address, so you have the pleasure of being embarrassed on the newsgroup instead. (Sorry, but I didn't have any other choice.)

No need to apologize, but you could post an occasional message
telling everyone that you stick to the standards, and explain them for
the clueless. ;-)

On this week's "Crimson Connection" we put the spotlight on one of King Crimson's finest musical accomplishments--the 1981 classic "Discipline". If you've never heard this one end-to-end, get out from under that rock you've been hiding under and get your download on at http://www.thedividingline.com/p

We'll also thrill your ears with Magma, Science Group, Azureth, and some fine Grammy award-winning Yes! (For those of you offended by the use of certain six-letter words, we apologize, but the discovery of this troubling factoid simply had to be mentioned.)

So come one, come all, and revel in the splendor of "Prog'opolis XXXI" (that's 31 to you non-Romans out there... thirty-one to you completionists):

Playlist for "Prog'opolis" 10.01.2005
Yes - Cinema  <2.07>
Prog'opolis Intro  <1.07>
Spock's Beard - Harm's Way  <11.05>
~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~
Emerson, Lake & Palmer - The Barbarian  <4.32>
Ring of Myth - Offering  <8.13>
Porcupine Tree - Mesmer I  <8.33>
Azureth - The Grand Design  <6.54>
Chroma Key - Astronaut Down  <4.56>
~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~
THE CRIMSON CONNECTION
Selected album: "Discipline" (1981)
King Crimson - Elephant Talk  <4.42>
King Crimson - Frame By Frame  <5.10>
King Crimson - Matte Kudasai  <3.49>
King Crimson - Indiscipline  <4.33>
King Crimson - Thela Hun Ginjeet  <6.25>
King Crimson - The Sheltering Sky  <8.22>
King Crimson - Discipline  <5.00>
~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~
Kansas - The Wall  <4.48>
Magma - Sckxyss  <2.47>
Strawbs - The Life Auction  <6.51>
Zonda Projeckt - Triste Azul Nocturno  <3.02>
~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~
Adrian Belew - Big Electric Cat  <4.52>  REQUEST
Kino - Loser's Day Parade  <9.03>
Rush - High Water  <5.33>  REQUEST
Genesis - Dancing With The Moonlit Knight  <8.04> REQUEST
~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~
King Crimson - In The Wake Of Poseidon  <7.58> REQUEST
Science Group - Garden Of Forking Paths  <3.19>
Enchant - Nighttime Sky  <8.57>
U.K. - The Only Thing She Needs  <7.54>  REQUEST
~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~
Eric Johnson - Trail Of Tears  <6.01>
Eric Johnson - Bristol Shore  <6.41>
Supertramp - Gone Hollywood  <5.20>  REQUEST
~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~
~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~

Lightspeed - Fly Away  <7.01>

Listen to "PROG'OPOLIS!" every Saturday night from 7-10pm (PST) and catch 'The Crimson Connection', a weekly hour-long celebration of King Crimson and related music. Listen live or catch the archive anytime at http://www.thedividingline.com/p

KKGO 1260/540   has a transmitter in  San Fernando valley to serve the greater Los Angeles area and a  satelite transmitter in Tijuana  to serve San Diego and Orange county.
There program breaks  are times to allow the  Tijuana outlet to play spots and info  for that market at same time it fills the valley outlet with LA spots.

The afternoon drive traffic consists of condensed traffic for SD & LA
combined,  it works slick.
Perhaps as KMLT  smooths out the programming for all 3 stations they can
do something similar... write the prog director and  give him heads up
Local radio can succeed  whey local people are included

And I'm wondering why KMLT hasn't done the same. They could rake in triple
the ad revenue they are now (ok, actually not triple, some ads would run on
all three stations, but the vast majority of their ads are for local
businesses in the San Fernando Valley and Ventura County).

> Perhaps as KMLT  smooths out the programming for all 3 stations they can

*shrug* In my opinion, a lot of the stuff Jill FM plays is junk. I actually
took them off my cars' radio buttons (had a button set in each car)

Hello everyone!

I'm the technician for WRMC, Moravian's intranet-only (only on campus) streaming broadcast radio station. We'd like to go Internet-wide, but the FCC site is quite confusing. Anyone have experience with the licensing involved in the change? The technology end is ready, but I wouldn't want to unleash us against the law, you know? We don't have any other licenses that I know of at this time. Thank you for your input!

- Jen Grier
WRMC Technician

Forgive me, if I'm one of a hundred replies here...

You don't need a license to stream on the Internet.  The FCC does not regulate streaming audio.

What you WILL need is clearance from various rights groups, such as the recording industry licensers (BMI, ASCAP, SESAC).  That'll likely cost the college money, for any copyrighted music that your station streams.

You may also need to talk to these folks:

http://www.soundexchange.com/faq.html

The following PDF file would seem to explain it...check near the bottom of page four for your situation:

http://www.kurthanson.com/internet-radio-handout5-1.pdf

But I'd definitely go through your college's faculty advisor, and through any NCE/college radio organization to which your over-air station belongs...

license?  license?!  we don't need no stinking license!

the only license you need for internet broadcasting is the permission to use
the content that you are streaming.  if this is music it means you need to
pay the appropriate per song royalties to the proper organization, which i
understand can be quite expensive.  if its locally generated content you
should be good to go.

I thought "Jill FM" would be all-female singers....

The few times I've heard it, it's mostly Michael Bolton, Barry Manilow,
that
type of thing....

You don't need an FCC license.  You DO need licenses from the copyright holders, but that is true of your current setup as well as a net-wide setup.

There is no FCC license required for internet "broadcasts" at the
present time.  Stream away......

I don't think you need to worry about the FCC, but you may have some
music licensing to deal with.  ASCAP, BMI etc.

That's certainly one interpretation. Mine was "music targeted towards women," and since their target market was probably already women in the 25-54 age bracket anyhow, it was just a question of advertising that they were targeting that market via their name change, and the addition of a bunch of songs to their playlist.

Maybe I'll listen again sometime - KELT-FM broadcasts throughout the Victor Valley and is well within listening range of my home - but... probably not.

Especially since they still don't seem to want to have any presence in this area or in Orange County. They are still a Los Angeles rimshot serving Ventura County and the San Fernando Valley; they just happen to have a couple repeaters.

Maybe not everywhere within 50 miles of Chicago - or in the
midatlantic states.

For sale: Partial ownership in new low power TV station in Rehoboth Beach, DE.

The "Radio Crazy"......It's baaaaaaakkkKk!!!!! Argh!!

Channel 59, 20,000 watts ERP. This will be the first commercial TV station in Sussex county. It is the fastest growing county in Delaware.

This is a joint venture. "Big Brother" makes me tell you there is an element of risk. You could lose all or part of your investment.

Active or inactive investors with at least $10,000 each are welcome. All investors would be on the board with full voting rights if desired.

Upon request I will gladly email the business plan which is about 24 pages long. It is in Word (doc)file format.

Tel: (478)741-1710 in Macon, GA.

References:

a-My parole officer. Mr. Larsoni Rapp, c/o Zing-Zing max. insecurity prison, Ossingstink, NY. Tel: 1-800-IMA-THUG.

b-Trade reference: Brazilian Badido Airways, Oshkosh Airport, Oshkosh, WI. (EAA anyone?)

Purchased a one-way ticket to Rio using all small
unmarked bills. Don't worry, I will not be leaving for
Rio until your funds are safely in my numbered Swiss
bank account. I am NOT a crook! (Who said that in
1974?)

c-Moral reference: Won Nobel "Gadjet" prize in 1985
for being first person in my state to be able to set
the clock correctly on a VCR !!! I invested all the
prize money in Bacon-flavored bagels in Tel Aviv and
lost every dime! I forgot that not too many people in
Israel eat bacon!

d-I founded the OTBBST (Organization To Bring Back
Spark Transmitters), The CEO of the organization is
resting "comfortably" (In a strait jacket) at the fun
farm! He snapped when nobody but an angry FCC agent
attended the first meeting! But think of the millions
of dollars saved by not needing transmitting tubes or
semiconductors! Duh!

The references above are in jest but the LTPV deal is
very real!

Who in the hell let these two assholes on the air?

Starr and Buckwild!

Their show is very offensive!

They paid the FCC to allow profanity and ethnic bashing as well as racial bashing especially white females.

I used to listen to 106.5 The Beat with Doug Banks.

106.5 Has Lost a Listener --- then again, they really could care less!

I am an ex-listener of 106.5 and now I listen to the Tom Joyner Morning Show on Kiss Fm 105.7 in Richmond, VA.   I am able to laugh and enjoy the show.
I love their humor and their wit, especially "It's your world".

Tom Joyner, you go! Props to the on air members like Miss Dupree with her "Winning Numbers".

That's what the radio shows need is more interactivity and not all this "in-your-face-profanity-regardless-of-the-law" shows like "Starr And BuckWild"

They need to be on the Satellite Radio Network -- NOT on our Richmond radio stations!

thank you,
"and may the good news be yours"
("Les Nessman" - "WKRP" in Cincinatti)

A true listener of the Tom Joyner Morning Show.

I'm sure we're all curious which commissioners were paid, how much and
when. Surely it's much more than any fine they might levy against the
station. Remember, we have a large deficit that broadcasters must help
pay down. We wouldn't want Commissioners diverting any of that cash.

Please report back and we'll blow this thing wide open.

Rich

Hi all. Sorry for the spam, but I need to unload a few things and
thought this particular item might be of interest to some of you. It is
an all-tube, CBS Labs Audimax RIIZ with manuals. Auction ends Sunday
evening (EST).  Item # 7342069710 . Thanks for looking.

"Meyer Gottesman" <wrecktech@yahoo.com> wrote in message
news:dch3f8$mn7$1@xuxa.iecc.com...

| For sale: Partial interest in nice LPTV commercial
| station in Rehoboth Beach, Delaware.

Steve - would you please stop clearing these?  I've asked Mr Gottesman, nicely, if it made sense to continue to flog this dog to uninterested eyes....once, maybe twice, is fair.  But this is excessively annoying, and pointless.

Mr. Gottesman....nobody wants your stinkin' "opportunity".  If it was such a great deal, then why is it that Viacom, or Disney, or half a dozen other big players don't want a piece of your action?  I'll tell you why....Rehoboth Beach is *dead* from October through May, because the water's too stinking cold, and it snows, usually.  Then in July, the thermometer goes above 90, and sticks there until about September 20th. Not exactly what I'd call "prime" real estate.  A nice summer getaway, maybe, but not a place where advertising revenue can be generated throughout the year.

To each his own, but it doesn't look like a viable market.  There are two existing CP's in addition to his, plus 3 applicants trying for channel 51.  The local Comcast cable looks to be a good one with 9 broadcast stations on it with stations from Baltimore, Philadelphia and

Washington on it.

I praise him for his efforts in trying to revive some semi-dead (or dying AM'ers) but this venture into TV might have been a mistake.

Charlie, the *old* engineer

THE fastest growing Classic + Modern Rock station on the Internet?

Is Radio Free Colorado.  http://www.radiofreecolorado.net

We play classic favorites from The Who, The Rolling Stones, Steve Miller

Band, The Hollies,
The Pretenders, Fleetwood Mac, Kansas, Styx, Pink Floyd, The Doors,
Janis Joplin, Three Dog Night,
Boston, Rush, Chicago, The Doobie Brothers, Neil Young, Eagles, Heart,
Yes, David Bowie and many more.

Complimenting the Classic Rock songs are carefully selected Rock songs from the 90's and today such as Coldplay, Dave Matthews Band, Daniel Powter, Nirvana, Pearl Jam and more.

To everyone concerned, regarding the Listenership Statistics for Radio Free Colorado, some of you may find these numbers of interest:

SHOUTCAST TTSL REPORT (TTSL)= Total Time Spent Listening
Report Date: Monday 08/15/2005 12:00:01 AM EST

Radio Free Colorado is ranked #51 overall of #3,335 SHOUTcast radio stations by Time Warner/AOL Music. This is after only 20 weeks of on-the-air operation.

SHOUTcast 30 day rolling total, taken from 30 days of data:

POSITION: # 51 of 3,335 stations

TTSL (Hrs): 308,244

# TUNE-INS: 654,836

5-MIN-TUNE-INS (Converted Listeners): 189,185

After only 6 months we are experiencing excellent listenership, considering we are a non-commercial, 100% Listener Supported Station.

We are on the list of the top 10 fastest-growing commercial-free stations in operation.

In Germany, we are ranked #5 overall of 2,568 Stations on the statistic tracking website: Liveradio.de Internet Radio Station Guide.

We broadcast a high-fidelity signal in 128 kbps and 32 kbps MP3PRO. Use Winamp, RealPlayer, Windows Media or iTunes to listen.

We also offer a high-performance ORBAN aacPlus 64 kbps stream for Winamp and RealPlayer users.

(DSL/CABLE/T1+) Listeners can tune-in to the 128 kbps Hi-Fi MP3 broadcast by using the following station "URL":
http://kangaroo.xfernet.net:80

(Dial-Up Modem) Listeners can tune-in to the 32 kbps MP3PRO broadcast by using the following station "URL": http://wallaby.xfernet.net:7000

Winamp and RealPlayer users can tune-in to our new ORBAN aacPlus 64 kbps
stream by using the station "URL": http://wallaby.xfernet.net:8000

This is why we need a charter, although no one seemed to care last time I
brought the subject up. :)

I know absolutely nothing about Delaware, but I'd say that there's probably
not much point in continuing to post about this particular property if no
one's responded yet. It has been a while since I saw the first post about it...

Thinking bigger..how about a php-based web board, with co-mods, on Airwaves.com.  A steam-radio counterpart to the thriving sat boards SiriusBackstage and XM411.

Somehow the existing AM/FM web boards require multiple clicks to read each post...and their threads falter once pushed beyond page 1.

On phpBB, each new post bumps the thread up...and there are topic categories, so Meyer's stations for sale could easily be located.  (Probably more easily on the web board than within their COL!  HI!)

Jerome

There used to be regular posting on usenet featuring how to charter a newsgroup, however let me note that since you can moderate said newsgroup, the MODERATOR gets to choose what is and what is not allowable in a moderated newsgroup.  At the same time from past experience, if some troll is sufficiently motivated, nothing will stop said troll posting even in a moderated newsgroup thanks to braindead software and the practices of some ISPs and Google.  Google is relatively easy to deal with, all you have to do is set each moderated post X-No archive and only the troll posts get through meaning that nobody bothers to read Google's collection of your newsgroup and it dies on Google from inactivity.

Thanks, but it's really not my call, it's up to the participants. I try to cater to the wishes of the people who participate. I actually participate a lot less now than I did when Bill was alive and moderating the group.

> At the same time from past experience, if some troll

It's eminently unfair to call Meyer Gottesman a troll. He's not.

> is sufficiently motivated, nothing will stop said troll posting even in a
> moderated newsgroup thanks to braindead software

More like a flaw in the NNTP protocol, but yeah, I get your idea.

Well, I haven't seen Val Davis around here lately, but if he isn't willing
or able to put something up, maybe I could. Interesting idea.

Steve Sobol <sjsobol@JustThe.net> writes:
> It's eminently unfair to call Meyer Gottesman a troll. He's not.

If someone is tired of reading his messages,
then why do they read them?

Clearly they know what's in his messages, or else they wouldn't
be tired of them.  And in case they forgot, his subject line is clear.
Aren't his messages are topical for the newsgroup?

Why not just skip them?
Does the complainer's software somehow force them to be read?
Mine just shows headers - you have to press a button to
cause the message to be downloaded and viewed.

   I would like it even more if everyone didn't comment on his
messages.  He is kill filed, but every reply puts it back on the
newsgroup.

"Christopher C. Stacy" <cstacy@news.dtpq.com> wrote in message
news:deaqep$h0n$1@xuxa.iecc.com...
| Steve Sobol <sjsobol@JustThe.net> writes:

| Clearly they know what's in his messages, or else they wouldn't
| be tired of them.  And in case they forgot, his subject line is clear.
| Aren't his messages are topical for the newsgroup?

In my view, a moderated newsgroup such as this one has discourse, maybe even arguments, all which progress until the thread either dies from lack of interest/nothing more to say/no longer germaine, or, in rare instances, where the moderator shuts down a thread because it's strayed too much from what we're supposed to discuss to be included here.  In an unmoderated group, none of this applies, of course, and one should, if it's a bother, kill-file the sender.  While I've never seen anything in the way of actual participation in this newsgroup from Mr Gottesman, I felt that killfiling him was too severe....and I *did* ask him earlier to stop sending what amounted to the same information, repeatedly.  That's just noise.

| Why not just skip them?

As above...I shouldn't have to in a moderated newsgroup.  In my opinion, these repeat postings had no purpose, and should be omitted on those grounds.

| Does the complainer's software somehow force them to be read?

No, but I got tired of seeing the headers, too.

| Mine just shows headers - you have to press a button to
| cause the message to be downloaded and viewed.

Regardless...my complaint was an observation...your results may vary.  If Mr Sobol opts to continue to clear them, it's not my call, and maybe I will killfile Mr Gottesman....but I'd rather hope that I'll see something of substance from him rather than his continued co-opting of this group for his own financial gain.

I apparently was not sufficiently clear. I was referring to the folks who bypass the moderation process as trolls rather than naming anyone in particular as a troll.  I might note incidentally that since Mr. Gottesman always posts with the same email address that it's already possible for readers to filter out his posts.  I apologize to Mr. Gottesman if I implied he was a troll.

When an earlier poster scribbled:
->->| Does the complainer's software somehow force them to be read?

On Mon, 22 Aug 2005 at 19:37 -0000, Bob Haberkost replied:
->No, but I got tired of seeing the headers, too.

Uh, er ... isn't that a bit lame? <ahem> After all, as a certain poster already said:

On Mon, 22 Aug 2005 at 19:37 -0000, Bob Haberkost scribbled:
->In my view, a moderated newsgroup such as this one has discourse,
->maybe even arguments, all which progress until the thread either
->dies from lack of interest/nothing more to say/no longer germaine,
->or, in rare instances, where the moderator shuts down a thread be-
->cause it's strayed too much from what we're supposed to discuss to
->be included here.

Say, whaddaya know! That was none other than YOU! <grin> In the first sentence of your very own posting, you contradicted that lamo "tired of seeing it" excuse. It looks like you're gonna have to flame yourself now! Go to it! Have fun! <ha-ha>

But seriously, folks (as the comedians are wont to say), your point is well-taken. Mr. Sobol is an experienced moderator, he's been moderating this group for years, and the "offending" announcement appeared only a couple of times. You should have more faith in the moderator, who I'm confident would've axed the "offending" posting if the poster had kept on submitting the same post multiple additional times.

->While I've never seen anything in the way of actual participation
->in this newsgroup from Mr Gottesman ...

Oh, does that matter!? Are postings to be judged not by what people say in the text of their postings but rather by who they are? I beg to differ: Mr. Gottesman's posting should've been judged acceptable or unacceptable based on its content, regardless of whether he was a "member" of the "club."

And speaking of that "club," yes, I'll have to admit you haven't seen me posting much here either. I've done all my posting on the "alt" group for many years but that's another story. In any case, as I said recently on another newsgroup, "nobody owns the Usenet."

Then there's this exchange where the earlier poster said:
->->| Why not just skip them?

....and in the same posting listed above, you replied:
->I shouldn't have to in a moderated newsgroup.

The implication is that because it's a moderated newsgroup, you expect 100% of the postings to be to YOUR liking and OF INTEREST to YOU. Uh, gee, I'm SOOOOO sorry to break your bubble <boo-hoo!>, but that just ain't reality -- unless you're the moderator. Everybody has to pick and choose which postings they're going to spend time on reading. Even in moderated newsgroups, there are always going to be some postings, even good postings, dealing with some facet of the subject which any one person isn't going to be interested in.

->... maybe I will killfile Mr Gottesman....but I'd rather hope that
->I'll see something of substance from him rather than his continued
->co-opting of this group for his own financial gain.

To paraphrase a remark in June by Stephen Harper in Canada.... If you want to be so friendly and encourage constructive participation on this newsgroup, you sure have a strange way of showing it! <grin> In other words, it's too late now. Gottesman's gone. He apologized. He left in a huff. (Or maybe it was a Cadillac or a Lexus.) He fell on his sword. He's not likely to be back. He's history.

And now other posters, who may have legitimate postings but perhaps there's some "commercial" element to them, will be scared off from posting here. And still other readers may shy away from posting because they figure you're just gonna slam them too. I've seen the exact same thing happen on other newsgroups. It's the same story over and over.

And finally, one more point: You do realize, don't you?, that when you said that the mere sight of the title of this thread ANNOYS you, you've practically invited people to keep on posting quibbles about this and that and the other?! -- because everybody now knows <ha-ha-ha> that you're gonna be annoyed!

It's like "Banned in Boston!" <grin> You've done the one thing to guarantee the opposite of the result you wanted! We're all laughing, I gar-on-tee! It'll be a hoot now to see how long this thread

title lasts.  <tee-hee>

I have a powered FM antenna that I would like to enhance the reception for a standard type boombox with a standard telescoping antenna.

The antenna I purchased was the Terk Q.

The hookup it has looks almost like a coaxial hookup (like for cable tv), but it isn't threaded.

Could someone please point me in the right direction as to where I can get information to do this?  I get a little better reception now, but I think if it was actually connected somehow, it would be much better.

Thank you for all your help!

There is a TV channel 6 in Philadelphia, an ABC affiliate. If you are in New Jersey, say Union, you can easily pick it up on 87.7.

How about this: Meyer posts only one time about any given property...

Good idea?

Just a note to  update anyone I've lost touch with over the years...

Cal Brady of the AOR and Drake vintage from Hartford, Buffalo, Boston and Monterey has
acquired a couple of stations on Oregon's Nortwest Coast:
Coast 96.5, a Hot AC FM in Cannon Beach, Oregon  and also KSWB AM 840 Gold in neighboring Seaside....

Now I've got no one to blame but myself

calbrady@pacbell.net

This is a followup to my earlier posting reporting on the death of broadcasting from the Xavier University campus.

And now the followup review:  The new WVXU station in Cincinnati, owned and operated by WGUC, the classical music outlet (now an independent nonprofit corporation, no longer affiliated with the University of Cincinnati), began broadcasting at midnite on August 22.  It is probably all that could've been expected, considering the circumstances.

As was expected, NPR news and talk programs that were impinging on the classical music schedule have been moved to the "new WVXU" on 91.7.  As in some other cities, one channel is now all-classical-all-the-time -- vitally important to the conservative burghers of conservative Cincinnati!  <grin> -- while the other channel is NPR-oriented.  (Never mind that for a long time WGUC has been criticized for being too much of a "top 40" classical station.  That's what its loyal listeners want to hear.  All-Beethoven-all-the-time is just fine with them!  But we digress.)

For the talk station they've kept the old WVXU call letters. That's in somewhat bad taste under the circumstances and I suspect likely to be a drag on fund-raising for some time.  A clean break on call letters would probably make it easier to accept the situation for those people who have any reason to identify with either Xavier University (such as alumni) or the former station (even if only as listeners or visitors to its studios) for the past quarter-century. It will be interesting to see what kind of reaction they get to their first on-air fund-raising talkathon. Will it succeed? Or will it fall flat on its face? I think they'd do better by changing the call letters.

The new owners have ditched almost all the locally-produced programs that made the old WVXU famous. In their place is an expanded lineup of national NPR programs. When the station purchase was announced several months ago, the classical station claimed that they would be saving money by having one organization operating what had been two stations. Does buying national programs instead of relying on volunteers achieve that?!?

In any case, some programs that are new to local NPR radio, or not heard here for a while, have the same themes as the former local programs that've been dropped. The new owners are apparently trying to appeal to the old audience but in a different way. The amateurs are out; professional announcers, both national and local, are in. Longtime blues host Lee Hay has been kept on. 60-year radio veteran Oscar Treadwell, the Nat Hentoff of local radio jazz (history and lore), is back. Rebroadcasts of 1940s programs are out; Stan Freburg's version of that genre is in. The local big-band, swing music broadcast is out; the NPR version of same is in.

One of the most noticeable differences between the old station and the new is the greatly expanded emphasis on news. They now have a five-person news staff, beefed up by stealing away the entire news crew of the other remaining local NPR affiliate. Is this a big gamble, or what? Do they think they can bring back the days of Morgan Beatty and the Texaco Five-Star News? Or Tony Marvin and the Mutual Network News? Or build their news staffers' names into household words like the way Douglas Edwards's name was known to everybody in the days before Cronkhite and, later, Rather? It may be a big gamble but the answer seems to be that this is how they're going to give a personality to the new station, since otherwise the station won't have disk jockeys and other familiar voices for listeners to identify with.

Overall, as I said at the start, the new station's schedule is pretty much what had to be expected. It's not a big surprise. As far as NPR listeners' interest is concerned, it looks and sounds like business as usual. Most listeners to the former station will probably be satisfied with the new programs that are similar to what they used to hear.

But as I said in my previous posting, this is NPR radio and what that means is begging for money. The all-important question is how well they do in their fund drives. Will the station retain a strong following and raise a lot of money? Or will too many devoted fans of the old station drift away to other local nonprofit stations, not to mention the many semi-local signals easily pulled in from stations 30, 40, 50, or more miles away? (When I first tuned in a digital FM radio I found it was possible to get stations here in Cincinnati on 79 out of 100 FM channels! Radio experts with more advanced gear can probably do better than that! So there's plenty of choice out there!) Time will tell.

That works, but I've had him killfiled for over a year now.  Now if
you could have figured out a way to put Gottesman in the subject line,
it would have killed this thread on my end......

Good question. The second and third notes sometimes had more information. I looked at a couple of the properties he mentioned. (Clifton Forge for example..)

Small town radio. The land of -small- staffs, where what everyone needs is an engineer to keep the system operating. Some were decent properties, others were real expensive. (The Clifton Forge property was overpriced in my estimation.) The area is almost too small to generate the needed amount of advertising revenue. The only good thing there - I was passing through on a Friday, and heard the office manger / sales person close a deal worth 10 or 15k to the station. If that happens all the time, there is hope. (Tractor dealer doing a lot of advertising over winter for the spring buying season..)

If the railroad jobs still existed there, it would be a busy little city, but unfortunately, those jobs have vanished... <sigh>

Hello group:

With respect to my recent "hated" LPTV postings, I have apologized for that and as I mentioned before, they will never appear here again.

However I had to get a chuckle when somebody said I "fell on my sword" and an equal chuck when I was described in "leaving in a huff". That was not the case as I am not angry. I must admit the postings did nothing for me.

By the way, I'm not as awful as "painted". In 2001 I was Chief Engineer for a 5 KW directional fulltime AM in New York City. I'm a  ham 55 years (age 70), was the past President and founder of non-commercial KPOO(FM), San Francisco. It is on since 1973. I am not all bad! Hi!

Personally if someone else wanted to buy a small market radio or TV station and posted a desire for investors, it would not bother me in the least.

What is funny to me is that while my postings on this topic have ceased, the flaming continues!

73,

Meyer Gottesman, W6GIV
aka The "Radio Crazy"

Following this posting there will be a review of the new station that went on the air on Monday, August 22, in place of the old WVXU. But first, for readers of this newsgroup, here's a recap of my earlier post (which appeared elsewhere on August 20th) reporting on the death of broadcasting from the Xavier University campus.  In addition, I've added more details and historical information on WVXU to fill in the background to this story.

- - - - -

A reminder here for listeners around the states of Ohio, Michigan, Indiana, and Kentucky who can tune in to any of the half-dozen stations in the X-Star network operated by WVXU-FM in Cincinnati.

Tomorrow, on Sunday, August 21, the station that's been at 91.7 on the FM dial for the last 35 years in Cincinnati will turn into the proverbial broadcasting pumpkin when new license owners take over at midnite.

One of three NPR affiliates in the immediate Cincinnati area, WVXU was recently sold off by Xavier University in order to raise money for other campus projects. After having developed a wide variety of programs over the years, WVXU became so successful that it sold for the whopping sum of fifteen million dollars. Local newspapers said that was the second-largest price ever paid in the U.S. for a non-profit station.

No offense intended, but it should be remembered that all they do here is beg for money. It's not as if they can sell advertising time and air commercials all day long. Nevertheless, WVXU became so big and so successful -- boasting that it had the most dynamic program schedule in all of U.S. public radio -- that when the license was put up for grabs, the "rival" classical music station quickly gobbled it up.

Now for the important reminder: Before WVXU signs off there will be a final two-hour live program on Sunday nite from 10 p.m. to midnite. It promises to be a tear-soaked farewell show.

And in another bit of late-breaking news, it's been announced that the new program schedule for the successor station has now been posted on the website of WGUC-dot-org. Today's Cincinnati Post newspaper reportedly has devoted two pages to the story, and more ink can be expected from the Sunday paper.

- - - - -

*POSTSCRIPT:* It might be asked why the followers of this station considered it so special. That's a fair question. Some possible answers: First, every station has its loyal listeners, of course. When formats change, those loyal listeners go into mourning. Also, this station was associated with a university, which not only meant that alumni identified with it but also allowed many people to get their start in broadcasting while they were students there.

In addition, the station felt that their format of so-called "block programming" was special, perhaps unique among nonprofit NPR affiliates. In plain language, that basically means 30-minute or 60-minute (or whatever) programs, just like what you'd expect on a "real" radio or TV station, as opposed to merely listing a bunch of names of disk jockeys who spin platters all day long. Maybe it wasn't so unique, but it did allow many volunteers and "amateurs" to go on the air and talk about specialized subjects. Some programs, like "Faith and Justice Forum" on Sunday evenings, were presided over by priests and nuns from the faculty of the school. Other programs, like one on Friday afternoons featuring a couple of computer and technology experts talking about the latest high-tech products, ranged across a wide range of possible subjects for filling broadcast time.

There were enough connections with the university campus to make sure listeners didn't forget whose station this was. But there were also plenty of programs that had nothing to do with the school but everything to do with developing a niche of loyal listeners. In particular, that meant many blocks of airtime for out-of-fashion formats like old-time (meaning 1940s) radio shows, including the likes of Jack Benny, The Great Gildersleeve, and other assorted cornball shows and cultural antiques. As somebody noted during the final two-hour broadcast, the "age of (old-time) radio" lasted longer on WVXU-FM than it had in real life! A second major niche was "jazz" music, which in this case meant mainly various kinds of "unpopular" jazz, from blues to bop to big-band. "When Swing was King" was one of the most popular programs, whose title pretty much sums up the image the station spent many years cultivating.

The old WVXU was so successful at all of this that reportedly other local, commercial stations complained to the FCC that they were losing listeners! A certain station, mentioned on the final two-hour broadcast but which I'll refrain from publicizing here <ribbit!> -- but which from time to time has promoted a mythical Tree Frog ale -- supposedly commissioned a survey to find out why the kiddie audience plummeted at a certain time of the week. It turned out that the likes of the Glenn Miller band (i.e., "swing" from the 1940s) on WVXU were a better radio draw than the latest inanities on the hip-hop scene.

Competitors also complained to the FCC about the extended "testimonial"-type blurbs for the businesses that were underwriting sponsors for programs. Sounding almost like commercials, this format was practically invented by WVXU's aggressive station director. When the FCC upheld the idea as acceptable, it was then copied by NPR stations around the country. Another pioneering move was to grab up half a dozen available noncommercial FM channels in small towns around this region, some hundreds of miles away, and turn them into a network.

The two longtime station executives who built WVXU into what it was also engendered considerable loyalty among the staffers and the listeners. Father Lawrence J. Flynn put WVXU on the air, and then continued to serve the station until his death in 1990. (The final broadcast emanated from the studio named in his honor.) And then for almost thirty years, professor and Dr. Jim King literally built the station up into a broadcasting legend and powerhouse. When a local company donated a building near the Xavier University campus, Dr. King led a squad of volunteers who refurbished and rewired the building for broadcast use.  That saved the station roughly half a million dollars, and turned an otherwise impossible idea into radio reality.

In sum, all of what's mentioned above produced leagues of loyal listeners for this station.  But that's history now.  In the next posting I'll have the early line on the new station that's now replacing this.

I just got back from vacation & noticed that Oldies 104.3 in Chicago, which got "Jacked" in early June, has brought back the DJs. The station still can't be heard  here locally unless you have a HD Radio. Does anyone have one?

On Thu, 26 Aug 2005 at 03:55 -0000, Steve Sobol scribbled:
->I offered a solution (only post once for any given property).

I was wrong; he's not gone!  He's supposed to be!  After all, I said so!  Apparently he returned in a Huff.  Or maybe it was a Stutz or a Cord or a Studebaker?  <grin>  Anyway, your solution sounds more than fair.

Say, how many properties does the guy have for sale?  Since I've been reading this NG for many years, critics [who feel obligated to read every posting] would say I should know the answer. But I don't because I skip those postings I'm not interested in. Thus Mr. Gottesman's postings haven't bothered me.  I hardly noticed them.  It's a lot easier that way!  <grin>

```

The Radio Crazy is NOT in a huff! Hi!

Again, all may rest assured that I am not going to
post any media properties for sale nor will I solicit
investors to help buy said properties.

'nuff said?

73,

Meyer Gottesman, W6GIV
Macon, GA

aka The "Radio Crazy".

I confess, I unkilled Meyer and retrieved all 3500+ posts in r.r.b.

What's the big deal?  Is someone unhappy because Meyer posts too many messages, or is it the content?  It must be the content because a lot of you have posted more messages (I counted 83 Meyer posts in the last year and a half).

Broadcast properties for sale seem to be on topic.  I notice the moderator lets them through, so maybe there is a compromise.

How about a single weekly post, like the dance charts, listing ALL properties for sale, or the location of all properties and you take it to e-mail if you're interested?  This gives Meyer something to do and those of us who might be interested in a station or two a chance to find a bargain (it could happen :-)

Carl Navarro

So does WKMG in Orlando. Their news department proclaims, "Take us with you on 87.7 FM!"

Update Wednesday - no sign of WDLT this morning at 5:30-6am in Central Ohio.
Things are back to normal, for the first time in a couple weeks.

I'd guess they were running daytime power and pattern and the guy who knows where
the switch is and what it's for is back.

Passive MW loop peaked at 760; all radios tried were the same.

Actual CE's, if you can get to them, are helpful and anxious to fix things,
in my experience.  The blockades are not a good idea.

KPAH RADIO & COSMIC CONNECTION
Presents... AN INTERVIEW: UFOs in the DMZ
Live 07/17/05 - AN INTERVIEW: UFOs in the DMZ Spring 1966
Because of this forum and the gentleman that approved my posting of a
plea many years ago this broadcast will be possible. It has been a goal

of mine to find an individual that had a story to relate about "Enemy
Helicopters" in the Viet Nam War. This week July 2005 has been an
exciting one for my television and radio series has received two
answers from a plea to be guests on my program Cosmic Connection.
www.pahrumpradio.com 1900 hours sunday  July 17 2005 If you have any
questions you wish to address to my Guest Ronald H.
You may e-mail us LIVE on the air at cosmic@pahrumpradio.com
Or before broadcast as so I may have your question ready for my guest
cosmic_connection@hotmail.com
Best Regards
I am Looking forward to this historic interview
COSMO
A Vietnam War Veterans Eyewitness Account of an event that happened in
the spring of 1966 30 miles south of the DMZ. The combat squad were in
20 bunkers of two man teams stating that the object was silent huge and
below radar contact this sighting was verified by another two man team
hear the full account on this sundays Cosmic Connection LIVE broadcast
July  17th 2005 at  www.pahrumpradio.com
2300 hours" I Corps" was the location. Sound of rushing wind in a
distance. It took about 5 min. to reach our area. It rattled the cans
tied in the barbwire. It was at this time that me and another Marine
looked up. It was black no lights 200ft. off the ground and disk shape.
It was Hugh and moving no more than 10 MPH. It took about a min. for it
to completely cross over. We were in a free fire zone but no one fired
a round. It was also reported at the other end of our perimeter by two
other Marines.

 93.5 in Centerville
100.7 in Harwichport
107.9 in Vineyard Haven

If they are so self centered about the Island, then, why in the hell do
they need so many freakin' translators. Its just like Terry Kaspar and
his translators.  P.S. No, the 100.7 is not a typo.

For sail: (I waz a chamiyun spelur as a child!)

Parshul ownersip of new LPTV station in wealthy
Rehoboth Beach, Delaware. Channil 59, 20,000 watts
ERP.

This is a joint vensure and there is an elimint of
risk. You could lose all or part of yore investmint.

Active oar inactive investirs with $10,000 (Ten thousand dollars) or more are welcume. All investirs will be on the board with full voting rights if desired.

There are only two commercial TV stations in all of Delaware on the air now. I am not counting other LPTV or translator stations.

Please request our Business Plan/Executive summary and I will send it via email attachment. It is about 24 pages long and is in Word (doc)file format.

My tel. is (478)741-1710 in Macon, GA.

References:

a-My parole officer. Mr. Larson E. Rapp, c/o Zing-Zing max. security prison, Ossingstink, NY. Tel. 1-800-IMA-THUG.

b-Trade reference. Brazilian Bandit Airways, Oshkosh Airport, Wisconsin. (Note hidden meaning, EAA types!). Purchased a one-way ticket to Rio using all unmarked bills. Don't worry, I will not leave until all funds are safely in my unmarked Swiss bank account. Account number is 73-73-88=88-SK-QRT. Opened April 1, 2005. Call 1-800-BAD-FUND.

The references are in jest, the LPTV is very real!

73,

Meyer Gottesman, W6GIV

Some strange happenings around NYC maybe someone can help me better understand.

First item:

There seems to be a TV channel 6 station on the air from NYC metro area with the only reason to be on the air is to act like a FM station on 87.7. Any one have details on this ?

Second item:

A friend who works and travels from Lodi NJ to the Catskills in NY says he is hearing a bunch of Spanish LPFM stations scattered across the Hudson Valley , all on the same FM frequency, all playing the same programming on a low end frequency that has never been assigned to any radio station by the FCC in the country with one exception, and this is not the exception. Could this be a pirate station with translators linked by internet ? I think he said the freq was 87.9 but don't hold me to that.

Steve

Yeah, I've heard about this one.  WNYZ-LP are the calls.

KZND-LP in Anchorage tried the same thing for awhile.  Not sure if they're still doing it.  The FCC seems to have repealed the rule that requires a station's audio be related to the video.

They do, however, require the station actually *have* video.  From what I've read, the Alaska station first didn't operate a visual transmitter, only an aural.  Word has it they were told that wouldn't fly.

87.9 is certainly a popular frequency for pirates. The only two legitimate stations on that frequency in the U.S. are near San Francisco and near Reno, Nev.. And *maybe* that experimental station in Texas is still authorized.

Almost certainly a pirate.  All of the Haitian stations in Brooklyn at
the bottom of the band are definitely pirates.

87.9 is called "channel 200."  It is assigned by the FCC only to stations
that have been forced to move from other noncommercial allocations, and of
course only in areas with no TV Channel 6 coverage.

Again, almost certainly a pirate.

Several solutions are suggested:

Russia:<br>
Why not pay Russia to jam the new Zimbabwe propaganda station?
Russia can summon up to 1MW carrier power for jamming.
Russia may have HR 8/8/1 (33 dBi isotropic gain) Curtin array antennas aimed at Africa.
The Russian jamming approach is cheapest, and no money is spent in Africa.
For the most part Europe, nor anyone else has been interested in spending any money IN AFRICA since decolonization.

Iraq:
If Balad were reactivated, it could be used to jam Zimbabwe.
http://cbc.svserver.com/cbc.svserver.com_non_ssl/balad.html
Balad aka SED (was commissioned to ABB / Telefunken as Balad).

Hypertitantic-geopolitical-hyperrealism commentary:
In spite of the great propaganda value that could be achieved by activating
all of Iraq's high power MW and SW transmitters, it is probably cheaper for
the US and UK to just let their military units be killed off -- and not have
anything to do with the minutiae of manipulating Iraq's entire
media-broadcasting infrastructure. I believe this political habit was the
creation of Kissinger during the Vietnam War when similar circumstances
existed with respect to mass media in the region.

> Ring the Zimbabwe just beyond it's Borders with Four

Spurs that are 455 KHz off the main signal are almost always the result
of image issues in the receiver.  But 120 KHz below is a funny place for a spur
to be, either due to transmitter _or_ receiver problems.  That's an
interesting enough one that I'd want to investigate it just from curosity
if I were the engineer.

If the GM is not helpful, a letter to the FCC sometimes is.  Not a phone
call, a letter.

Unless you happen to be in a market with an analog TV C h. 6.

Then it's not so popular...

Now, taking this just a bit further...when the time comes that
over-the-air analog goes off-the-air, I'm wondering if frequencies
like 87.9 & 89.1 will REALLY start sprouting pirate signals.

Thoughts?

We have just launched a new show called the Cool Traxx Radio Show. It's currently running as part of the Hits Of Yesteryear stream. We play the best tunes of the last 25 years.  Cool stuff from Katrina & The Waves to Bowling For Soup.  Don't worry the Hits of Yesteryear hasn't been hi-"jack"ed as in some other cases.  It's a separate.  I would like to encourage PD's to give it a listen or comtact me for more info.

There is a TV channel 6 in Philadelphia, an ABC affiliate. If you are in New Jersey, say Union, you can easily pick it up on 87.7.

If you broadcast, or to listen to radio shows, check out our directory of internet radio shows; with "one click to play" stream links and schedule grids for 100's of the more popular broadcast or internet webcast radio shows from commercial and public radio stations.

http://www.radioshowlinks.com/

A Directory of Internet Radio Shows and Stations; Listen Live or On-Demand.  The directory includes Schedules and Stream links for Talk Radio, Current Events, Business, the Arts, and other programming.

You can listen on just about any device connected to the internet with a streaming player on it, including PCs, PocketPC, and mobile devices such as Smartphones and Nokia Series 60 phones.

It's all free; no registration required.

We're looking for new stations and shows to include.  Please check it out and let us know what you think about it and any suggestions you may have for shows, or stations, that we should add to our Internet Radio guide.

We also publish banners of scrolling schedules and rss feeds of various content channels.

Thanks.

John

My friend,
I inquired on this newsgroup about this same issue on 87.7 a couple of years ago when I heard reggae music being broadcast I was told that it was most likely a pirate station. And I've listened to this

frequency this year in late spring-early summer and it was broadcasting some kind of informercial programming during a.m. drive time, and after about a week of that stuff, they switched to Russian language news and info programming up until 9 a.m. and then they broadcast something that sounded like hip-hop Russian style. I haven't tuned in recently.

I live in Nassau County and I can receive the station s9, q5.

Evan

Is there any visual carrier along with it?

This _is_ illegal unless there is a visual carrier, even if the station

is licensed.  Of course, they could just be broadcasting a test pattern,
but they have to do at least that.

COSMIC CONNECTION
This Sunday July 24, 2005 7PM PACIFIC
Part Two of "Ufos in the DMZ"
AN INTERVIEW: Mr.. Don Delano
I was the artillery spotter on Strongpoint ALFA-ONE during the month of June 1968 when the UFO incident transpired. We were shelling the sampans in the mouth of the Ben Hai River when we noticed the hovering lights through our Night Observation Device (Large, classified "Starlight" scope). We radioed 9th Marines to clear all aircraft from the area. We were informed that there were no friendly aircraft in the area. Calls to radar at Gio Linh (ALFA-TWO) verified the existence of aircraft in the area. A US soldier, David Lemcke, was killed on A-1 a few weeks before these incidents. Because of the furor that erupted over the UFO's, his remains were never recovered. The remains are STILL THERE, waiting to be recovered.
The DMZ, or demilitarized zone from the Vietnam War, stretches 70km east from the South China Sea to the boarder with Laos and is where all the major fighting occurred during the Vietnam War. Movies like Platoon, Full Metal Jacket and Hamburger Hill are all based on the fighting that happened here.

There is someone broadcasting Russian talk and music at the bottom end of the dial, I've noticed it for the past several months. It's audible (but not strong) over the northern 2/3 of Manhattan, from about midtown up. I heard it last week from my hotel room on W. 58th St. Next time I'll stick around for an ID (yeah, right!).

I just moved to Chicago and have found that there are no longer any
decent frequencies for my wireless FM modulator (sold through XM radio)
as the modulator only allows me to use one of 8 frequencies (88 or 107
.1, .3, .5, or .7).  I have since come across other FM modulators
designed for MP3 players such as the iRiver AFT 100 Mobile FM
Transmitter.  Does anybody know if this or other FM modulators can be
used with XM radio?  For the record, my XM radio has not been
professionally installed as my car is being leased and this is not
allowed by the terms of my lease.  Also, amazingly, XM radio was
completely unable to help me with this question.  Very disappointing
technical support.  I'd hate to have to give up my XM radio...

Thanks!

(This is great internet radio although its a shame is only 40 K bits/second, definitely one for my favorites - Mike)

June 4 2005

Dear CBS/ FM listener,

Tuning in to 101.1 FM today, you probably noticed that things sound a little different.

CBS has changed addresses. Instead of being at 101.1 on FM, the heritage CBS-FM you know and love now lives here online at wcbsfm.com. Click on the "listen here" banner above to hear the Greatest Hits of the 60's and 70's streamed with all the great music and fun you have come to expect over the past three decades on your radio.

We are very excited about CBS FM online, and our goal is to have many of the-on air personalities you have enjoyed and loved over the years stream their shows live. We will continue to incorporate many the features and special theme weekends you have come to expect from this great station.

Our "Ultimate Tax Refund," contest is officially over please click here to see our winners including the Grand Prize winner! Congratulations to all!

Stay tuned because in the future, CBS-FM's High Definition (HD radio) broadcast signal will also make it possible to listen to your favorite music and personalities in crystal clear digital sound on your HD Radio. More information on that coming very soon.

101.1 FM is now JACK-FM, and we hope that since you loved WCBS as 60's and 70's, that you will give JACK-FM a try too.

Be sure to let us know what you think of CBS-FM Online. Thank you for your years of listening to WCBS on the FM band, and now let everyone know that CBS-FM moves into the future by going worldwide. The Greatest Hits of all Time lives on here at wcbsfm.com!

Sincerely,

Chad Brown
Vice President / General Manager
WCBS Online @ www.wcbsfm.com
101.1 JACK-FM

Sure, any of the modulators will work.  They all just take baseband audio
and have an RF output.

Before doing that, though, check and make sure that your car radio does not
have some sort of line-level audio input.  A lot of them are set up
for external CD players or the like, and the XM unit can be connected into
there directly without having to deal with silliness like the modulator.

If the plug is the same it will probably work.
The 1/8-inch stereo plug is most common these days.

Hey, thanks to jack fm here in Chicago for fxxking up a good radio station with this bullshit format.   I'm glad I have XM radio.  It will eventually kill off people like Queer Channel and the other cloned broadcasters.  It's sad to see broadcasting take a dive like this, but money money money.  Screw the listeners.

Having lived in Chicago, may I suggest you pick out a frequency and see which one works best while producing a stronger signal that what is received on the frequencies you have available.  Unless your FM receiver is subject to overload, the FM modulator should produce enough of a signal for you to produce a big enough dB difference that the modulator signal captures the FM receiver.

One other approach if your lease is retro enough to have a tape player is to find one of the formerly common adapters with a plug and plug that into the XM receiver.  Most XM receivers I've seen have audio available through a common 1/8 inch stereo jack, meaning that any matching audio technique will work. You also may have jacks on the radio in the car which would allow a straight audio connection.

Not sure if my post got through.  Try having a direct inline FM modulator installed in the vehical by Circuit City or do it yourself. It installs directly inline to the radio antenna cable, and produces a stronger signal like you'd need.  I haven't tried this yet, but am tempted.  I also live in the Chicago area.  Radio here blows, but I love my XM.  EMAIL me if you'd like.  n9vu at yahoo dot com.  Thanks, GB.

There is a new Jack station popping up in a market almost every day now...Why did it take so long for American radio to embrace this format when it was such a success across the Canadian border over two years ago? Mark Ramsey, of Mercury Research in the US, started showing that there was room for a wide variety music format centered in the 70s and 80s, however most research companies didnt show this hole existed. It took Canada to think outside the US format box to come up with Jack.

## What happened to Radio?

Anybody in radio who has the smallest modicum of a social life has heard the repetition complaints from their friends and neighbors for years. Those of us with Top 40 backgrounds are accustomed to such comments, as the nature of our format involves repetition. But when you start hearing these kinds of complaints about Rock, Oldies, and even Triple A stations (!)� shouldn't we have woken up and smelled the coffee long before now? Since the Telecom bill in 1995 as our industry got gobbled up by consolidators, we threw any long term thinking and a lot of the common sense we had out the window. As an industry we did stop listening and feeling our radio stations with our emotions and started analyzing them on paper...Our industry got the "tighter is righter" fever and we overplayed music. With their hands forced by the high prices that were paid in the mad scramble for radio stations, consolidators cut radio station staffs, and cut budgets and starved our radio stations of the tools they needed to create great entertainment. We fired or shut down personalities and took the remaining staffs and doubled their workload and responsibility. The final result being that we took a lot the passion out of radio station staffs, and that took the passion out of what came out of the speakers.

Radio has survived just fine, but now there are iPods, music on the Internet, and Satellite Radio and the public woke up to the fact that radio has changed and other compelling music options exist without commercials. Now radio owners have to pick up the gauntlet and reinvest in their stations in order to be ready to face the challenge that is coming fast to threaten radio.

## The Search For Variety

We drove listeners to their iPods and satellite radio for musical variety over the last 10 years. We program radio stations to Arbitron diary keepers not to the mass audience that's out there (and they aren't necessarily the same) In an effort to garner lots of TSL in order to get big ratings, you have to program a music mix that builds this consensus among a wide audience. When you do auditorium research you see about 200 songs that ALOT of people love, so around 200-250 titles is where programmers stop filling out their libraries Problem is those GREAT songs people love become songs people are tired of given a ton of airplay. The sad thing is that research never told us to play 200 song play lists...it was the interpretation of what was a good score and the lack of patience in reading the signs of what a good developing score with new music to determine whether to hold on to a new song. All we had to do was listen to our radio stations like a listener and we would know they were too tight...musically this misreading the research has gotten us in the trouble we're in, especially with variety formats (Oldies, AC, Hot AC, Classic Hits/Rock). Listeners would rather hear the songs they like, not love, in the mix so they don't hear �Jack & Diane,� or �Good Lovin',� or �Stairway to Heaven� over and over again without relief. The success of Jack is proof of this.

### Looking back to the beginning of Hot AC

When I was part of the team that built KHMX in 1990, I remember apartment shopping in Houston, looking through a resident's album collection while taking a tour, and realizing that the music in that collection wasn't being played on the radio. That mentality was incorporated into the music that went into the highly successful launch of KHMX. That experience seems to mirror the current iPod-inspired mix of the Jack-type formats.

In 1990 I had a sound in my head that I passionately felt was missing from radio at the time. There were not any upbeat, fun, radio stations that played Pop-Rock (with some Pop) music for women 25-39 who grew up with the Eagles and Fleetwood Mac. These were listeners who grew up with Top 40 in the 70s and early 80s and the music mix is really very similar to the essence of what Jack is today. One major difference is that I strongly believed in personalities who were involved with listeners on the air and off the air, sweepers were at a minimum and personalities and listeners on the air were dominant.

What's funny when you look at a play list from 1990's KHMX Houston, the first 80s-centric Mix Hot AC. I see a balance of fun upbeat Pop & Rock currents from Rod Stewart, Mariah Carey, Robert Palmer, Poison, Taylor Dayne and a gold library filled with a lot of 80s titles and some 70s titles from U2, Eddie Money, Bangles, Eurythmics, Journey, Boston, and Fleetwood Mac. All songs and artists that are the core of what Jack is today. Its just another example of what happened to this format as programmers abandoned the original 25-34 females fans who loved the radio station when they reached their upper 30's, and as this music didn't have the same appeal to the new 25-34 female audience (as did Pop Alternative music) and so many of these songs were put on the shelf or were played lightly by Mainstream AC. Also the KHMX library during the early 90s was 500 titles, in an effort to deliver on the Variety Promise, something that was during the late 90s Modern AC phase of Hot AC.

The cultural differences we faced in 1990 vs. today are dramatically different, the competition for a radio listener's attention is dramatically more competitive than in 1990, but our job of capturing pop culture with our radio content and keeping listeners in touch still remains job #1 for us as programmers.

### Programming to ARB diary keepers not the mass listeners

Ratings and TSL have been sagging for years. In many ways consolidation has caused a lot of the problems we face today. It is difficult to take risks when you look at the millions upon millions of dollars that a radio station is worth. Its difficult to spend money on programming and talent when you operate on half of the budget your radio station operated on 10 years ago. And if its not part of your budget, and your operating is based on quarterly results, when you run a major corporation (in any field) its so much easier to preserve the status quo. However we all know "programming by the numbers" doesn't work...great entertainment has to be created using great intuition and great creativity. We don't allow experimentation these days--there is too much at stake, plus our creative people are saddled with so much programming, administrative or production responsibility that they don't have time just sit, brainstorm, and create.

### Taking Risks

There have been radio stations that have taken chances and done things differently over the past 15 years, as mentioned previously KHMX Houston, Triple A WMMO, Z100 in New York City, WKTU New York, Triple A KPIG in Northern California, and Music/Talk WKXW in Trenton New Jersey. All these stations took chances to create magic. Great radio stations of the past had great personalities, great contesting and outstanding theatre of the mind production that captured listener's imagination and listening loyalty marketing. Great radio stations great are unique, local and all know how important great personalities are to their success. They also know that while they have a long term strategy, the programming staff/air staff have to be empowered to work their magic on the spot and not forced to follow a stagnant never changing cookie cutter blueprint layed out by an ivory tower directive.

### Hot AC: Adapting and Doing the Basics

WMMO and KHMX made adjustment to adapt as listeners tastes changed and market conditions changed. Many of the Hot AC's struggling today didn't adapt and didn't do the basics that upbeat adult formats must do to survive. There are basics that must be done for Hot AC to survive especially in the crisis mode this format is in now with the Jack format at its throat... Here are the basics needed for Hot AC to survive as described in my article Hot AC=Mercedes Benz from 2003..

� Marketing: Some form of outside Marketing is essential during Spring and Fall

� Mornings: A strong morning show is essential

� Research: the radio station target's needs and music and implement the results wisely

For the last few years, most companies starved Hot AC radio stations instead of heeding the warnings. The format was struggling due to not following this formula, taking hits due to the 80s format, and it got hit again in 2005 with Jack. Now, unless Hot AC takes immediate action to correct itself, the format is in serious trouble, because:

The Jack format done properly and marketed well is poised to become the upbeat Variety station in the market, a position held by the successful Hot AC's in their markets. Because Jack is a broader variety format, this has put Hot AC on the endangered species list of formats. Jack is already produced with great production values that are a lot more "fun" than a majority of Hot ACs and although Jack has no DJ's it has a lot more personality than many Hot AC's do with a full time air staff.

I am thinking about starting a non-commercial radio station in the ATL GA area. Id like to have a simultaneous live-stream available per the Internet.

1) legal implications?
2) I have researched re. the royalties and it seems like there would be $0.02 due per song played, plus a $500 minimum fee per calendar year. Aside from that,:

2.1) how do I get an available frequency assigned and how much does it cost? I have searched the FCC website back and forth, and I cannot find a clear answer to these questions.

2.2) what minimum equipment is needed to start broadcasting? Ballpark for cost? Id like to keep it simple and cheap, kind of like wanting to start broadcasting from my basement.

I know these are very general and broad questions, but I do have some good ideas and I think people would like to listen to it.

thanks!
R.

With apologies to "Dr. Strangelove"!! LOL!

The "Radio Crazy" is baaaaaakkkk!

For sale: Partial interest in nice LPTV commercial station in Rehoboth Beach, Delaware.

DUMKOPF!! Do I have to tell you that Rehoboth is possibly one of the richest small towns on the 3rd body from the Sun? With a Winter population of about 1500, they get over 2.7 million visitors per year!

WRDE-LP has been assigned channel 59 with an ERP of 20,000 watts. This will be only the third commercial TV station in all of Delaware.

This is a joint venture. There is an element of RISK.
You could lose all or part of your investment.

Active or inactive investors with at least $10,000 each are welcome. All investors would be on the board with full voting rights, if desired. Please don't respond if you have any felony convictions, any drug convictions, even being fined $10.00 for smoking "pot" or are NOT a US citizen.

The CP expires May 5, 2007 so we have to get moving.

Please call or email. Tel: (478)741-1710 in Macon, GA.

References:

a-My parole officer. Mr. Larson E. Rapp, c/o Zing-Zing max. security prison, Ossingstink, NY. tel: 1-800-IMA-THUG.

b-Trade reference: Brazilian Bandit Airways, Oshkosh Airport, Oshkosh, WI. (Those not "unwashed" will see the importance of Oshkosh..hint....EAA)
Purchased a one-way ticket to Rio using all plain unmarked bills. Don't fret. I won't leave until your funds are "safely" in my secret Swiss bank account. I will not be leaving a forwarding address but I AM NOT A CROOK!

73,

Meyer Gottesman, W6GIV
aka The "Radio Crazy"

PS The references are in jest. The LPTV is very much for real!

We are looking for a radio sales pro with a minimum of 2 years experience in the Las Vegas Market.  Gaming and Casino advertising sales a definite plus.

PokerUpdates.com is expanding rapidly and will be on air in the Las Vegas market within a month with a two hour weekly radio show on a local AM outlet.  We are not the station.  We are looking for an account exec/Sales Mgr. who is a self-starter with qualified lead sheets and experience in closing deals quickly for our new radio venture.  Within 90 days we expect to be on 30 or more major and medium market stations nationwide, as well as our streaming windows media show.  Our goal is to be in 100 markets by September of 2006.  This is a poker/gaming talk show with an established internet listener base that we're taking to the airwaves.

There are also other opportunities for the right person to sell advertising for our monthly (soon to be weekly) PokerUpdates online Television show, and other projects we're launching in the next 30-60 days.

Top commission paid with draw against commission for the right candidate.  Please send a resume ASAP to rick at symbol pokerupdates dot com and I'll call you within 2 business days for an interview.

Again, local Vegas Radio sales experience is a MUST, casino and gaming radio sales experience will put you at the top of the list.

For sale:

Partial interest in LPTV station in nice Delaware beachfront city. Very "hoity toity" (23 skiddo, kid!) community. $3.5 million buys you a condo in this city of 1500 Winter population. 'nuff said?!!!! It is licensed to Rehoboth Beach, DE. Sussex county. FCC CP is in order. Station is ready to build "yesterday"!

This ia a joint venture. There is an element of risk. You could lose all or part of your investment.

Active or inactive investors with at least $10,000 each are welcome. All investors would be on the board with full voting rights. We are a Delaware corporation and have a checking account established with a Rehoboth Beach, DE branch. Ask for free copy of our 24-page business plan in Word (doc)file format. We can send it to you via email attachment.

We are members of the local Chamber of Commerce.

My tel. is: (478)741-1710 in Macon, GA

References:

a-My parole officer. Mr. Larsoni Rap, c/o Zing-Zing max. security prison, Ossingstink, NY. Tel: 1-800-IMA-THUG.

b-Trade reference. Brazilian Bandido Airways, Oshkosh Airport, Oshkosh, WI (Pilots will see the connection!)

Purchased a one-way ticket to Rio using plain unmarked bills. Don't fret, we won't leave until all of the investor's funds are safely "tucked away" (heh heh)in our secret Swiss bank account. So long, you O(#((#(#(uckers!!!!

73,

Meyer Gottesman, W6GIV

PS. The references are in jest but the deal is very real!

KLAV AM 1230 to be Flagship for new Poker Updates Radio Show

Las Vegas, NV.

"The PokerUpdates Radio
Show will begin airing on local broadcast stations around the Nation in the very near future".

That was the announcement made by Rick Charles, aka "The Voice of Poker" and Eric Rosenberg, President of PokerUpdates.com on Friday July 29th, after inking a merger deal between voiceofpoker.com and PokerUpdates.com in which PokerUpdates will acquire voiceofpoker.com. Charles and Rosenberg will co-host the radio show.

Charles also announced the "Flagship Station" will be AM 1230 KLAV and the show will begin airing a weekly 2 hour live call-in talk show every Saturday from 5-7pm Eastern, and 2-4pm Local Vegas time. Beginning Saturday August 20, 2005.

While in the syndication process, (and even after) PokerUpdates will be streaming the show live via Windows Media Format on http://www.pokerupdates.com and the shows will be archived for later listening if you miss the live show.

When asked why the shows debut is almost a month away, Charles said, " I'm not going to miss the BARGE (Big August Rec Gambling Excursion) No Limit Holdem Tournament and Banquet speaker Wil Wheaton this coming Saturday and the next week I'll be in Biloxi, Ms. attending my daughters wedding."

The show has aspirations of airing in over 50 markets by the end of 2006, and will be adding stations weekly or monthly while still maintaining its streaming internet format. This will be a LIVE call-in show with a Toll Free call in line,and will feature all of Poker's top players, weekly features, "Ask the Expert", and much more.

To listen on the internet you must go to PokerUpdates and register (absolutely free).

Said Rosenberg "Because we love our viewers and listeners so much we'll give you a FREE one year subscription to TOP PAIR MAGAZINE just for registering (limited to first 200,000) What are you waiting for? Register, and tune in!"

Program directors interested in adding Poker Updates Radio are asked to email Rick Charles at rick atsign pokerupdates dot com. The show is available in bicycle or barter with local avails and can be delivered via CD, FTP, ISDN, or Satellite in the near future.

So sydneys new DMG Radio Station is Vega 95.3

I prefer to call it Viagra 95.3

But here at Narwee nothing much changes... Oh the Premier lives across the Road
and the Muslim Book Store at Lakemba still opens at 9am.

Vega sounds ok. Angela is fine at Breakfast on Viagra but I just went back to something more Abrasive with Graham on 90.1 yelling "were for everyone...;not just the Baby boomers!!!!!!

Vega was also one of the Yachts that sailed against the French Nuclear Tests in our Backyard

Moruroa Atoll and the Vega (Source Wilkypedia)

In May 1972, when the newly-formed Greenpeace Foundation put out a call

to sympathetic skippers to help them protest against the French Government's atmospheric nuclear tests at the Pacific atoll of Moruroa,

a response came from David McTaggart, a Canadian expatriate and former entrepreneur based in New Zealand. McTaggart, a champion badminton player in his youth, had sold his business interests and relocated to the South Pacific following a gas explosion which seriously wounded an employee at one of his ski-lodges. Outraged that any government could exclude him from any part of his beloved Pacific, McTaggart offered his

yacht, the Vega, to the cause, and set about assembling a crew.

In 1973, McTaggart sailed the Vega into the exclusion zone around Moruroa, only to have his vessel rammed by the French Navy. When he repeated the protest the following year, French sailors boarded the Vega and brutally beat McTaggart. Later, the Navy released to the media

staged photographs of McTaggart dining with senior navy officers, which

suggested a degree of civility between the opposing parties. A different picture emerged when photographs of McTaggart's beating, smuggled off the yacht by crew member Anne-Marie Horne, also appeared in the media.

The campaign against French nuclear testing achieved a victory when the

French government announced a halt to atmospheric testing, only to begin testing underground. Greenpeace would continue to campaign against testing in the Pacific until the French ceased their testing programme in 1995

Whatever you think of the station Vega 95.3 its a Great Callsign !!!

Keith

I love WOR - it is one of the great reputable rascals of broadcasting. But on this one I think they, or the good Kreskin, have a very good press agent.

I recall many =FDears back when their tv arm was hauled up in front of the FCC after it was discovered that the lab-coated professor introduced as their science correspondent  was in fact the unemployed brother in law of the station's PD.

WOR is a bit like Sydney's 2GB and Auckland's 1ZB, and Los Angeles' KNX. They've all kept more of their identity than many of the clone radios these days, and I would cut them a lot of slack for that.

And they've been at it since 1922, so they are among our senior citzens.

Philip

(hard to imagine that there are radio stations around that are more than 80 years old. Do they get a free library card and cheap doctor visits, I wonder?)

Freedom of Speech
Monday 1 August 2005
Presented by Michael Duffy

Andrew Fraser is a professor of law at Sydney's
Macquarie University. Recently he has called for a
return of the white Australia policy. A phone poll
which had 35,000 callers) conducted by Channel 9's A Current Affair
showed 85 per cent of the audience agreed with Professor Fraser's
controversial stand. Others see him as a rascist. Andrew Fraser puts
his case on Counterpoint an ABC Talk Back Radio Program.

The Flying Humanoids of Santa Monica, Ca.

THIS WEEKS COSMIC CONNECTIONS' August 7, 2005
KPAH Internet   www.pahrumpradio.com  7 pm Pacific

Interview will feature Mexico City's ongoing visitations , the Flying Humanoids that first were taped by Ed Sherwood in Santa Monica Calif. and then discovered in Mexico City.

I plan an extensive questioning of Mr. Sherwood's knowledge of the English crop circle phenomenon as he has researched it from the hills and country side of the United Kingdom. Join me for an unprecedented discussion of events that may very well be taking hold of our lives in time today. How can it not change the way we look at the world if we only observe the data before us.   Cosmo...

On July 11th 1991 (nearly fourteen years ago), the most significant single mass UFO sighting and event of the last century occurred above the worlds largest city, Mexico City, and other cities around Mexico. It was prophesized by the Maya 1200 years ago to usher in a new era of 'Cosmic Awareness' and 'Earth Changes', and since then much has come to pass to fulfill that prophesy, 'Quetzalcoatl' it seems has 'returned', and to date, more UFO footage has emerged from Mexico than anywhere else on Earth, affirming we are NOT alone.

In Early 2004, Ed and Kris Sherwood began to read about recent sightings of unidentified flying 'humanoids' observed in the skies over Mexico, including two daylight cases in which the 'entity' had been filmed!! Unprecedented in UFOlogy, 'Unknown' entities had been filmed flying above city neighborhoods in broad daylight! Footage of what look to be flying humanoid entities, or 'hombrecitos volodaros', is a very recent development in Mexico's ongoing UFO activity and is 'high strangeness' of the truly phenomenal kind.

WGN in Chicago is now 81 years old under the same ownership.  You can
see old ads, etc., plus hear their 40th and 75th anniversary specials
amongst other things at http://wgngold.com.

I live in the far north suburbs, and frequently have to drive through the city to the far south. Using the FM modulator on your XM radio is a PITA, especially in the city, where cross modulation and the plethora of low end operator makes finding a clear channel next to impossible.

If you're using your XM antenna will as the radiator for your FM modulator, proximity is king. The output of the XM FM is sufficient for a good capture. This will block lesser signals, except when you're up on them.

That makes cross modulation the bigger issue. Not much you can do there, I"m afraid.

There are two alternatives, though, depending on your radio. One is the cassette adaptor. This is actually better than the FM modulator in that it produces better audio, without the noise, or other artifacts of the FM modulator.

The other is a direct line in. On my Caravan, I set my MyFi on the cup holder, and run the line out it to the CD changer line in. I also use this input for my iPod. In my car, though there is a stereo mini jack under the face of the radio for a direct aux input. Simple hookup, clean line input, excellent results.

To paraphrase Gorman-Redlich: There is no reason to have to give up your XM. It's "guaranteed to work, even in Chicago."

Or hang on a few weeks and get one of these:

http://news.ecoustics.com/bbs/messages/10381/153844.html

Which supports up to 100 FM frequences, one of which will surely be
free...

Those stations in Latin America that operate as FM nets already have the
necessary domestic coverage. SW in that area will increasingly be exclusive
to cultural, religious and such type broadcasters who can afford to run
stations with no "measurable" audience.

I don't remember that one. I do remember a shortwave outlet on 6115
from the University of Sonora....the shortwave seems to be gone, but
they have Internet streaming now:
http://www.uson.mx/medios_informativos/radio_uni.shtml

There's an update on this.

KSL's engineers discovered a tarantula sized bug in IBOC that caused the seven-second delay. They were able to fix some things, and soon the bell sound reappeared about four days after the first reports of this surfaced.

BTW: Clear Channel fired up IBOC on KJMY 99.5 Bountiful/Salt Lake this week (the first FM in the market to do so), and probably the next day fired up the IBOC equipment at KODJ 94.1 Salt Lake.

ART CAMPBELL
The Crash Retrieval on the Plains of St. Augustin, NM.

This Sunday July 3rd 2005 7pm PST
click on the page to have the Audio 365 player build for you www.pahrumpradio.com. Cosmic Connection will interview Mr. Art Campbell. Mr. Campbell has an amazing new book out describing his research into The Crash Retrieval on the Plains of St. Augustin, NM. To coincide with the 58th anniversary of The Ufo Crash At Roswell New Mexico.

Art Campbell: Crash Retrieval on the Plains of St. Augustin, NM For years you have heard about the Roswell crash. Now hear the researcher speak about the recently-retrieved material. Learn about the artifacts found at the site. Other material will be discussed in connection with this project. Art has uncovered some amazing artifacts from the site during 8 years of research, including something resembling a small artificial body part and some strange narrow shoe soles. This material and more will be on your Cosmic Connection, including analyses of his finds by independent laboratories. You wont want to miss this interview. Tell your friends that this will be an amazing showcase.
KPAH Radio 7 pm pst www.pahrumpradio.com

Saturday 2nd July 2005 from 1400 CET

Every single day, 30,000 children die needlessly, of extreme poverty. On July 6th, we finally have the opportunity to stop that shameful statistic. 8 world leaders, will gather in Scotland for the G8 summit, and will be presented with a workable plan to double aid, drop the debt and make the trade laws fair. If these 8 men agree, then we will become the generation that made poverty history. But they'll only do it if enough people tell them to.
That's where Live 8 comes in. Ten concerts, 100 artists, a million spectators, 2 billion viewers, and 1 message... To get those 8 men, in that 1 room, to stop 30,000 children dying, every single day, of extreme poverty.

On Saturday 2nd July, concerts will take place in the UK, France, Germany, Italy, USA and Canada, and the music world's biggest stars will be present to cause a stir and support the cause. On this one day we can make all our voices heard in unison.

And here at MTV European we are dedicating the day to the Live 8 spectacle. Each hour from 1400 to 0100 CET, we will be going live to the Live 8 concerts across the globe, where our presenters will be hanging out backstage, speaking to the musical legends that are playing there, and getting the gossip on what is happening behind the scenes. And with talent such as Coldplay, Dido, Sir Elton John, Shakira, Joss Stone, The Killers, Madonna, Mariah Carey, Sir Paul McCartney, Audioslave, Pink Floyd, Razorlight, REM, Robbie Williams, Scissor Sisters, Snoop Dogg, Stereophonics, Sting, Travis, U2, and Velvet Revolver on hand, the behind the scenes coverage is set to be riveting viewing.

(MTV Europe)

In addition to television coverage on the MTV networks and ABC, the Live 8 series of benefit concerts tomorrow will be extensively covered on broadcast radio, satellite radio, and Internet audio and video.

AOL's music site will stream live video coverage of all 10 concerts plus archived on-demand feeds. Premiere Radio Networks will offer their broadcast affiliates the pop and rock concerts, plus interviews and other coverage. Finally, XM Satellite Radio will broadcast six concerts live.

Countries with a maritime audience, like Greece, will probably still
target their nationals.  Likewise Radio Australia and Radio New Zealand
with their widely spread target populations on the islands.

news:da7agp$6qt$1@xuxa.iecc.com...
| In addition to television coverage on the MTV networks and ABC, the Live
| 8 series of benefit concerts tomorrow will be extensively covered on
| broadcast radio, satellite radio, and Internet audio and video.

| AOL's music site will stream live video coverage of all 10 concerts plus
| archived on-demand feeds. Premiere Radio Networks will offer their
| broadcast affiliates the pop and rock concerts, plus interviews and
| other coverage. Finally, XM Satellite Radio will broadcast six concerts
| live.

Don't know about you, but CTV's (Canada) coverage was nearly wall-to-wall, with a lot of good excerpts from around the world, both shortly after they happened, and later in a five hour(!) wrap-up show after the concert in Barrie (Toronto) ended (with Neil Young, in his first performance since emergency surgery for an aneurism). CBC Radio One's coverage was also quite good, with more of an ear for the older demographics (those who were in their 20s when the first Live Aid played). By comparison, American coverage really sucked.

WDLT 660 Mobile is booming in in Central Ohio at 5:45 EDST;
they have no appreciable radiation northwards, according to the
map, and 850w nights as well, and their local sunrise is 5am CST,
which is over an hour away.

Coming in over WFAN 660 NYC.

I suspect they're on daytime power and pattern (10kw) but don't
know how to check it.

Can anyone tell me what the beginning music bed is? AND the final haunting melody which ends the short film? One is upbeat the other is new age? I am trying to find this out, any info would be appreciated. I have contacted the HV people and they say that the video was not done by them.
thanks
view flying video
at:http://eu10000562.eu.verio.net/boreme/funny-2005/stunt-flying.php?gobackto=funny-latestqqlatest

this is a short video which was edited by someone and not by the group so they have no info on it!

thanking you in advance!
ken

Mike Terry wrote:
> Saturday 2nd July 2005 from 1400 CET
>
> Every single day, 30,000 children die needlessly, of extreme poverty. On July 6th, we finally have the opportunity to stop that shameful statistic. 8 world leaders, will gather in Scotland for the G8 summit, and will be presented with a workable plan to double aid, drop the debt and make the trade laws fair. If these 8 men agree, then we will become the generation that made poverty history. But they'll only do it if enough people tell them to.
> That's where Live 8 comes in. Ten concerts, 100 artists, a million spectators, 2 billion viewers, and 1 message... To get those 8 men, in that 1 room, to stop 30,000 children dying, every single day, of extreme poverty.

OK I'm going to be a real cranky devil's advocate here. Does anyone have any statistics as to how many children were spared an early death SPECIFICALLY because of Live 8 or Live Aid or "Do They Know It's Christmas" or "We Are The World"? Where do you get that 30,000 figure from? Do you audit the death figures? That sounds like a conveniently rounded number.

Obviously the event organizers want to do the right thing and their hearts are in the right place. But any sociologist can tell you that poverty and disease are not eradicated merely by throwing money at them. You have to have a plan for what to do *after* the big shows are over and the stars go back to their limousines and mansions. That's when the REAL work starts.

Much of the food relief supplies purchased with money from the earlier events wound up rotting on the docks or was stolen by corrupt governments. What safeguards are in place to prevent a repeat performance? How many of those G8 world leaders were even aware the concerts were happening? Will it affect whatever decisions they make?

How much of the Live 8 money will be going for EDUCATION in the poverty-stricken areas of the world? One of the best weapons against poverty is teaching the affected people how to raise themselves out of it.

Poverty will continue to exist in spite of every well-meant effort to eradicate it. Live 8 might make life a little better for them for a while, but poverty will always exist in the world. It sucks, for sure, but that's the way the world works.

GTTyson  (who wishes the Live 8 shows really could make a dent in the poverty statistics)

There is no bug in IBOC. It has been known since the beginning that the digital processing creates a 6 to 7 second delay; to allow analog fallback, a delay must be introduced in the "main" signal as well. The only time this is an issue is if the station uses on air live cues for spot coverage or, in the case of KSL, the time chime.

This is not a bug. It is by design.

There is a service called dyndns.org which will allow you to repoint a
DNS entry whenever your IP changes.

BUT, to be honest, tiscali is a disaster and is blocked by a huge number
of sites because of their spam and hacker problem.  Getting off of Tiscali
and only a legitimate ISP will help you a lot.

In search of BBCWS "Bow Bells" interval signal in MP3 (44.1 khz, 16 bits,
mono or stereo) -- possibly from Carillon recordings...

I need to add the MP3 as embedded audio on one of my webpages.
MP3 file sizes under 512kb preferred, 128kbs MP3 data reduction (non-VBR
preferable).
Would consider AAC also, except for lack of browser player support.

They may very well have special permission given that tropical storm
Cindy is in their area.

Next Monday they will have hurricane Dennis.

http://cbc.svserver.com/ -- new broadcasting website

[Text selections follow]

Power Broadcasting, a multi-denominal religious broadcaster, needs your assistance in the construction of a shortwave broadcasting station in Papua New Guinea (PNG).

Our broadcasting station will be capable of reaching 2.5 billion (*) potential listeners when completed. Listeners in Indonesia, Burma, Pakistan, Afghanistan will be able to hear the word.

-=-=-=-=-=

Indonesia and South East Asia, post 911

Indonesia has become a paradise for extremist organizations.
Australians, New Zealanders & US nationals have been killed in recent terrorist attacks in Bali Indonesia.
More may be killed in future attacks.

There are future attacks against Europe and the US being planned in Indonesia.
Extremists in will be pursuing terrorist actions for decades to come in Indonesia.
These extremist organizations threaten global democracy, justice and the rule of law -- and will use any possible advantage given to them.
What can I do about it?

There are ways to lessen the influence of these dangerous militants. As the current situation stands, the Indonesian populous has almost no moral willpower to resist these foreign militants.

However, we [nor anyone in the Indonesian populous] can't just confront these militants without adverse negative political and security repercussions. All of these problems can be sidestepped by moral religious broadcasting.

International radio broadcasting is one of the few ways that allow the local populous to be helped, without directing their loyalty to the militants or upsetting local government structures.
Indonesians depend on international shortwave broadcasting : Indonesia consists of hundreds of scattered islands without substantial telecommunications infrastructure. Reliable telephone service only exists in about 20 large cities, but not in the 30,000 small villages where most of the population lives.
Poor telecommunications helps shortwave broadcasters by providing many listeners in need of news from nearby islands and nations listening to news

via shortwave.

As of this time there are no broadcasters in the region that are capable of helping the local inhabitants to morally resist the persuasive power of the foreign militants.

Einstein used to say, "God may be sophisticated, but He's not plain mean." What Einstein meant was that if you're playing against nature and trying to discover a new principle of physics -- it may be a tough problem, but there's nobody trying to outwit you. In war and terrorism there is always someone who is not only trying to make it harder, but is trying to kill you.

-- R. James Woolsey, Strategic Analyst

-=-=-=-=-==-

What are the costs for not helping?

The Indonesian people (and other Islamic peoples in Southeast Asia) must be persuaded to move their loyalties from the extremists to those of western pluralism.

The Indian Ocean tsunami relief effort may have provided temporary goodwill. This goodwill cannot last, and the extremists know this. They will be preparing to attack, and will succeed  unless we can stop them by any means possible.

Without using the tools of moral persuasion -- the following incidents may become reality.

!!!! More Text !!!!

-=-=-=-=-=

Advantages of the ALLISS transmission technology not shown here: other parts of the world can be targeted at will.

Very few religious broadcasters target Pacific Islands nations individually, but this precise targeting is possible with ALLISS technology.

The Russian Far East can be reached easily from PNG.

You do not need permission to use better facilities in time of emergency.

MTV Stung by Live 8 Criticism

By Geoff Boucher and Chris Gaither, Times Staff Writers

Bruised by harsh criticism and soft ratings, MTV executives Wednesday acknowledged missteps in their broadcast of last weekend's Live 8 concerts and hinted that they might retool the program and show it again.

Some kind of do-over is "not the craziest idea," said MTV Executive Vice President Van Toffler, who quipped that the Allman Brothers song "Whipping Post" best described his office's post-show morale.

Ratings released Wednesday show that the eight-hour live broadcast of Live 8 performances that aired Saturday on both MTV and sister station VH1 had an average viewership of only 2.2 million viewers ? less than the average audience for the Saturday afternoon airing of the 1999 film "Toy Story 2" on the Disney Channel.

MTV's handling of the concerts ? staged in London, Philadelphia and eight other cities ? was faulted for frequent cutaways from key musical moments to go to commercials, offstage banter or less compelling performances elsewhere.

"Knowing what I know now, I probably would have made the decision to go commercial-free," Toffler said.

Unfortunately for MTV, its performance also was juxtaposed with a widely praised showing by AOL, which offered comprehensive coverage on its music website, AOL Music.

Ken Ehrlich, who produced the Live 8 show in Philadelphia and is a veteran producer of the Grammy Awards, said the AOL event would be remembered as a defining moment in online music consumerism.

"This is a template for the future," he said. "Not to negate the importance of television, but I really think the Internet generation has come of age and the numbers have multiplied to a point of real change?. AOL opened the door here and once it's open it ain't going to close."

AOL bought the exclusive rights to the Live 8 shows for an undisclosed amount and then licensed them to MTV, XM Satellite Radio and Premiere Radio Networks. The shows also were carried across the globe by regional networks.

Kevin Wall, executive producer of Live 8, said the combined television and Internet audiences probably topped 1 billion and greatly amplified the discussion of its cause: relieving debt and poverty in beleaguered nations in Africa.

"MTV was a big part of it, not just on the air but in making the whole thing happen," Wall said. "There were disagreements creatively on some points, but you won't find anyone involved in this who has anything bad to say about MTV."

That was not the case on the Internet, where irate viewers vented loudly about MTV cameras leaving key moments such as the Pink Floyd reunion. Critics weighed in too.

But Toffler said the channel was hemmed in by decisions made in the four weeks leading up to the show, as the bill of performers was still taking shape. In retrospect, he said, MTV should not have placed such a high priority on showing so many acts, at the expense of airing complete sets by key artists.

A combined average of 2.2 million total viewers watched from noon to 8 p.m. Saturday on MTV (1.4 million) and VH1 (762,000), according to Nielsen Media Research.

Toffler said getting an estimated 18 million viewers to tune in for at least six minutes of the broadcast was "a brilliant success" for MTV and also for the "social cause."

Two hours of Live 8 moments also aired on ABC during prime time Saturday and drew an average of 2.9 million viewers. ABC's concert was the night's least-watched program on the major broadcast networks.

"It was a pretty horrible performance ? [but] it was on Saturday night, which is a throwaway night for the broadcast networks," said Brad Adgate of Horizon Media Inc.

As for AOL, its online broadcast of Live 8 was designed to promote a major strategic shift for the world's biggest Internet service provider.

As its number of subscribers declines, the Time Warner Inc. unit is vying for a bigger piece of the $10 billion that advertisers spend online annually by offering free of charge many of the services once reserved for paying members. Video and music are key components of its efforts.

Jim Bankoff, AOL's executive vice president of programming and products, said more people watched this event than any other streamed event on AOL, including the funeral of Pope John Paul II. Five million unique users visited AOL Music for its free streaming video from the concerts. At peak moments, the site was streaming 175,000 simultaneous video broadcasts, which AOL said was an Internet record.

"It was a tipping point," Bankoff said. "It's the biggest step so far and a pretty big leap forward."

Times staff writer Scott Collins contributed to this report.

In other words the permission is blanket, not "special".

They were still there this morning (Thurs 7/7) broadcasting emergency blues,
if so.

I'd suspect that one of their antennas is out of spec, eliminating
a required null to the north.

No, but the emergency has to have been officially declared to do so,
doesn't it?  Which is not to say that it wasn't, but it seems to me Cindy
was hundreds of miles off the coast when Ron posted this, and thus Mobile
wasn't yet in a declared emergency.

Friday, July 8, 2005

Ottawa - Canadians are spending an average of 90 minutes less per week listening to the radio than a decade ago, says a report on radio listening habits released Friday by Statistics Canada.

On average, Canadians aged 12 and older spent 19.5 hours a week listening to radio in the fall of 2004, the same number of hours as the previous year but down by 11/2 hours compared to 1995. Also they are listening to radio more in the car and at work and less at home.

The study is a joint project of Statistics Canada, Heritage Canada and the CRTC. Data was collected over a seven-day period, using a log-type questionnaire covering an eight-week period from Sept. 6 to Oct. 31, 2004...

09 July 2005

A new radio station for the Island could be launched by the end of the year.

Energy Radio Ltd has announced plans for a new station aimed at over-35s playing hits from the 1960s, 1970s and 1980s.

The new service Energy 2 will feature a format of music, news and local features and will initially be broadcast online.

3FM launched last October, aimed at 34 to 55-year-olds with a BBC Radio 2 style, but managing director of Energy Juan Turner believes mature listeners are still missing out.

'The Island's older audience is still not being musically catered for with Manx Radio focusing mainly on speech and Energy FM and 3FM aiming at the same musical targets,' he commented.

'It leaves a vast void for listeners wanting to hear music such as the

Beatles, Rolling Stones, Motown artists and even more easy listening artists such as Neil Diamond, Carpenters and The Eagles.'

Energy FM launched in July 2001 aimed at 15 to 35-year-olds.

Its main frequency is 98.6FM, but also broadcasts on four other frequencies. The company is examining the feasibility of splitting some of its frequencies and reusing some to provide coverage for the new station, similar to the way Manx Radio splits its FM and medium wave frequencies.

Subject to scheduling software and music being installed at Energy's headquarters, Market Street, Douglas, the new station could be live online by the autumn.

As I understand it, in times of emergency, a station can use its
better (daytime, etc.) facilities at any time...they just have to
notify the FCC after the fact.

Maybe blocking Don Imus' show is an emergency. :D

No. Stations that are sudden storm or eartqhake zones, or where industrial accidents have happened  to cite examples, can use discretion. Many of these are never declared emergencies (like the Nortridge quake in 1994)

>Which is not to say that it wasn't, but it seems to me Cindy
> was hundreds of miles off the coast when Ron posted this, and thus Mobile
> wasn't yet in a declared emergency.

I've been in a half dozen major hurricanes in Puerto Rico, and, while always at stations that had same day and night facilities, know preparations for them begin 48 to 72 hours in advance. A strike threat would be enough to go to the best mode of operation possible.

And, as I type this, Dennis is just hours away from landfall pretty
much right in the middle of the Mobile market.

Of course, this station will likely not turn the power down early
Monday morning, thus depriving Ron of his desperately-needed Imus
fix...maybe he can squeeze a signal out of WFNR/710 Blacksburg VA, or
one of the other Imus affiliates he tries to get through the static...

www.ipodverts.com is an auction site for podcasters to auction advertising spots on their podcasts. It was launched on the 9th July for podcasters to start listing advertising spots they wish to sell. Membership and Basic listings are FREE and ipodverts only charges a small fee if/when an advertising spot is filled.

Help pay your podcasting bills with advertising revenue.

And more import is the fact that any operation using the emergency
provisions require that the operation be uncommercialized (FCC wording).

Charlie, the old engineer

They've been doing it for a couple of weeks, so I doubt it's any emergency.

I think they don't get to broadcast any old way they want no matter what I want to hear something else for, if those are the terms of the license. I think either they've miscalculated sunrise (add vs. subtract for daylight time) or one of their nighttime antennas is at the wrong phase or amplitude for the required northward null.

WFNR 710 has become a very difficult shot in the last year for some reason but I haven't investigated. A couple of years ago I was hearing WDSM 710 in Duluth as well.

http://rhhardin.home.mindspring.com/wdsm.ram
http://rhhardin.home.mindspring.com/wfnr2.ram

WFNR competes with WOR 710 NYC, splatter from WLW 700 Cincinnati and some Miami station on 710 before sunrise.

For sale:

Partial interest in new LPTV station in Rehoboth Beach, Delaware. Callsign: WRDE-LP. Channel 59. 20 KW ERP. It will be the only commercial TV in all of

Delaware with both studios and transmitter in the state.

This is a joint venture with an element of risk. You could lose all or part of your investment. Be fairly warned!

Active or inactive investors with $10,000 min. are welcome. We are now a Delaware corporation. "Rehoboth Beach Communications, Inc."

The CP we hold expires May 5, 2007. We have sufficient time to build.

Please contact me for our 24-page business plan and executive summary. It is in Word (doc)file format. I will gladly email it to you.

My tel. is: (478)741-1710 in Macon, GA.

Our new website is:    delaware59.tvheaven.com

It is still under construction so please bear with u.

73,

Meyer Gottesman, W6GIV
aka "The Radio Crazy"

References:

a-My parole officer. Mr. Larson E. Rapp, c/o Zing Zing max. security prison, Ossingstink, NY 12345. Tel: 1-800-IMA-THUG.

b-Trade reference: Brazilian Bandit Airways, Oshkosh Airport, Wisconsin. Purchased a one-way ticket to Rio using all cash (Unmarked bills). Don't fret, I won't leave for Rio until all investment capital is safely in our Swiss bank account.

LOL! The references are in jest but the LPTV is very real!

Here they are this morning, station ID break, in Central Ohio, loudest thing on 660 kHz, by far

http://rhhardin.home.mindspring.com/wdlt2.ram

Not bad for 800w with a null directed north.

Though I do like to poke a little harmless fun at the lengths you go to, to receive Don Imus' show...I do think you're right here, and it probably doesn't have much to do with the tropical weather in this case.

Ron,

Why don't you just turn on MSNBC? Crystal clear via DirecTv. No
tweaking. No adjusting antennas. No nulling. No static.

I don't know if it's related, but I located the voice mail of the chief engineer (I think) and he's been off for just the amount of time that WDLT has been the owner of the frequency in Central Ohio.  left a message.

All stations ought to put the chief engineer's email on their web page; you have no idea the hassle it is to discover who they are, and I assume they'd like to be the first to hear, not the last.

With one (WRFD 880 Columbus, spurious signal on 760) I couldn't get past the station manager.  She said they check the frequency regularly and I was probably hearing a harmonic.  The women are the worst.  (Curious fact, 2 x WOSU 820 - 880 = 760)

>>All stations ought to put the chief engineer's email on their web page;
you have no idea the hassle it is to discover who they are, and I assume
they'd like to be the first to hear, not the last.<<

Wrong, on two counts:

1) You assume every station has a chief engineer.  Most stations in small and medium markets have contract engineers...no one full-time.

2) You assume they have the time or inclination to read e-mail from the public.  Every CE I know, even those in major markets with the luxury of a staff, has no time for such things.  They have to pay attention to little things like keeping their stations on the air.

>>With one (WRFD 880 Columbus, spurious signal on 760) I couldn't get past the station manager.  She said they check the frequency regularly and I was probably  hearing a harmonic.  The women are the worst.  (Curious fact, 2 x WOSU 820 - 880 = 760)<<

Sexist comments aside, how do you know she wasn't telling the truth?  How do you know the intermod product you describe isn't being generated in your radio?

That's crazy... I just ordered 25 of them last week.  Are you sure we're
talking to the same folks?

One of the antennas I use with some success is what I call my "picture frame" antenna, as it's mounted on a picture frame with the standard dimensions of about 3 by 4 feet (with a "painting" by a Starving Artist or whatever) which gives you a circumference of about 14 feet, or about the wavelength of an FM signal.  Buy sufficient *unsheilded* twin-lead from your local electronics supply store, cutting a length sufficient to mount it around the frame, using nails, glue or whatever works to keep it wrapped around the frame.

Taking the excess (you DID buy excess, didn't you?) attach one wire to one of the wires of this loop.  Follow the loop around the frame, to assure then that you have the other end of this wire at the other end of the loop. Connect *it* to the remaining wire on the side already connected to your feeder, and then connect the last wire to the free wire on your feeder. The end result is you'll have two loops, at about the correct wavelength for FM.  Hams and CB'ers use a similar design, called a cubical quad, which you might see on towers...they're squares, mounted some distance apart, and are very directional.

This antenna is somewhat directional as well.  If you have problems with some local strong stations, it might be possible to reduce their strength if your antenna is properly oriented.  You can hang the picture directly over your receiver (assuming you don't mind showing an Elvis on velvet) or simply place it behind your stereo cabinet if you have one.  Using this antenna I've pulled in stations from over 120 miles away consistently with a good line of sight (Erie PA to Toronto, where most of the FMs were at lower than normal power, high atop the CN Tower), on a receiver not particularly sensitive.  Your results may vary.

past
| >still out there, smiling at you.

| Let me understand this. You grew up with WCBS-FM but no longer listen
| to it yet you want it to stay around just because you know it's there.

Well, there it is, isn't it?  Radio one grows up with, and grows out of.
Although I have to note that one of the reasons why people grow out of a
particular radio station is because the radio station fails to grow
themselves.

| You abandoned them. Even worse, you got older and ceased to be of any
| value to them. That should be the slap in the face. There are many
| things in life that we abandon yet retain fond memories. Is Viacom
| obligated to keep WCBS-FM in perpetuity or just until you kick the
| bucket?

Well, no....but Viacom should have found some creative innovations besides
playing the same 2,000 (or 4,000 or whatever) cuts day after day.

| I'm sure this decision was carefully made by the TV folks running
| Infinity. I'm sure they'll give the format time (2 years) to grow and
| prosper. I'm sure they won't adopt the TV habit of changing
| programming every 6 months.

| Have faith that "iPod on Shuffle" is just the awesomely creative new
| format radio needs.

I think you've made my point, if I can assume that it's your usually droll
wit, and not some hurrah for this new trend, eh?

I have been doing some FM DXing lately, and have been trying to come up with some "number" to give a relative value to what I have heard. I know that I cannot look at just transmitter power and distance, because the transmitter's HAAT has a definite bearing (pardon the pun...not a reference to a directional antenna).  Do any of you know of a website (or anything else) that can clearly specify the important criteria for this kind of evaluation, and maybe supply equations as well?

I have studied the FCC "FM Curves" and other information they have posted, and the closest thing I can find is a page that specifies the maximum ERP for a station given the class of a station and the antenna HAAT.  I don't honestly know if anything that I can derive from that would be directly applicable to what I'm trying to do.  I also may have my head firmly lodged somewhere thinking that this can be done too.  Advice and suggestions gladly accepted.

Are you trying to evaluate how far beyond their normal coverage you are hearing a station?  If so, the FCC has a contour plot for every FM station on their FM Query. The plot is for the 1 mV/m contour for all stations except Class B, where it is the 500 uV/m contour.  These are the protected contours.  These field strengths are those predicted for a receiving antenna 30 ft above ground. Coverage depends very strongly on terrain.

Doug Vernier's Am Fm by ZIP Code web site
http://www.v-soft.com/ZipSignal/zip_answer.asp
gives predicted field strength for every ZIP code down to signals well outside their protected contour.  He's in the coverage prediction business so I'd trust his data.  Of course it is meaningless within the same ZIP code as the transmitter.

Mike;

I reckon that SW does have a future, particularly for the 3rd World.
Additionally, who's to say that new technologies don't implode with viruses
or terrorism, wrecking computerised systems? Modern TV and radio (FM,
digital) provide sanitised pap. Like other group members have stated; SW is
a medium for the truth and objectivity.

> The ttradition was that KSL broadcast the 'Nauvoo Bell' on Temple Square, at the top of every hour. The bell was once in the original Nauvoo LDS (Mormon) Temple but was removed before that building was destroyed by an arsonist then a possible F5 tornado a year after that. The Mormon Pioneers carried it across the plains with them.
>
> They mounted it eventually in its present location, and it has rung every hour ever since save for occasional times due to maintenance or other circumstances. It will still ring, but because of IBOC it will not be heard live on the radio any more. KSL has aired the ringing of the bell for almost all of our lifetimes until last week.
>
> The technical explanation given was that there is now a seven-second delay between the analog and digital signals being broadcast. People actually have been known to, and still set their watches to the Nauvoo Bell's ringing on the radio.
>
> This was discovered when a radio fan saw some men on a snorklift removing some electronic equipment from the tower. An email to the chief engineer of KSL confirmed it.

You can also forget about taking your portable radios to the ballpark to listen to the broadcast while watching the game while IBOC is in use.

I am trying to evaluate all stations heard on FM.  For ones that are local or semi-local, its more an exercise in statistics than anything, because they can't be construed as a "catch" unless its on a home-made radio (and even then maybe not).  For non-locals, its to assign a "degree of difficulty" for lack of a better phrase.  Also to try to establish a reason why a 400-watt station at 60 miles out with a high HAAT value is received much stronger than a 68KW station at 115 miles out with a slightly lower HAAT.  Both have mountain-top transmitters and are non-directional.  I'm also trying to figure out how to evaluate stations received during skip, but considering that each episode of skip is probably unique, only catches made during the same episode could be evaluated (if at all).

The contour plots would be a good reference for locals and semi-locals.  The "degree of difficulty" that I am trying to figure out would be a mathematical extension of the contour plots for the area beyond the plot.  I'm banging my head against the wall here looking for words, and just referred back to the web site you mentioned.  I picked one station which according to the list for my zip code delivers 65.1DBu to the area.  That transmitter is 70.2km away.  There is a range of hills between me and that station.  I picked a zip code on the other side of the hills that is about 25km closer, and the signal strength there is 76.4DBu.  If I were 150km distant, it would deliver much less than 65.1DBu, but how much less?

With regard to Doug Vernier's web site, I have trouble believing it. Either his data is based on some very old information, or I live in a zip code that's a complete anomaly. He lists 143 stations for my zip code. In order of descending signal strength, #28 is an FM station that is completely inaudible because the frequency is completely covered by another station that doesn't even make his list. #43 should be in the top 5. #13 should probably be #2, #22 breaks up so badly at night that it is virtually inaudible, and he is listing their night pattern as #22. I don't think its my specific location within the zip code, I think its the data. I also don't think that the theoretical data he is using takes into consideration adjacent channel interference at all. I could be wrong, but I'll trust my ears on this one.

Anyway...time for coffee. Am I on a tangent here?

Well ding dangit look what I found:
Two Yahoo aircheck groups that seem to have activity

One is AM TOP 40 RADIO and the other is classicairchecks.

Problem solved.

I will still support ReelRadio but this will be an excellent arena for relatively free-form discussion.

Thanks
KAT

> I reckon that SW does have a future, particularly for the 3rd World.

SW started dying as an effective medium in Latin America in the 60's, and there has been a reduction of the number of stations on SW of about 80% since then with very few left... SW receivers are seldom seen now.

> Additionally, who's to say that new technologies don't implode with
> viruses
> or terrorism, wrecking computerised systems? Modern TV and radio (FM,
> digital) provide sanitised pap. Like other group members have stated; SW
> is
> a medium for the truth and objectivity.

Which explains why it seems that half the SW signals listenable in Latin America are venagelical religious broadcasters and very little news of any kind is available.

Now that we've (once again) established that shortwave is dead, let's
go back to discussing all the cool stuff we appear to be collectively
hallucinating as we tune around the shortwave bands.

There are two kinds of dead:

1) Doesn't make economic sense to broadcast (David's definition).

2) Doesn't exist (your definition)

Plenty of sw broadcasters do not depend on economic return.  They
either have a "mission" themselves, sell time to someone with a
"mission", or are supported by a government (with a mission). It's no
longer like 1940 when you could hear US baseball games in Spanish,
sponsored by Colgate-Palmolive, on shortwave.

I guess this guy has never been to a less developed country where SW is
the only radio you can receive.

Shortwave still has an important part in many parts of the world. It
helps people in remote areas stay informed. It's much more practical

than TV, internet, or even standard AM/FM in certain aspects. I highly doubt you'll see much more major shortwave broadcasting from developed Western countries though, at least domestically.

I owned a commercial SW license in Ecuador in the 60-s and turned it in as I could see no way of making it work.

```
Additionally, I owned 12 other stations in Ecuador, ranging from Quito and
Guaquil to Tulcan, Lago Agrio and Bah�a de Car�quez.

I have worked in every Spanish speaking nation in Latin America except
Uruguay, Nicaragua and Cuba. I have visited every single one, some as many
as 100 times. I have lived in Puerto Rico, Ecuador, Mexico and Argentina.

Your assumption is not correct.

By David Hinclley
Daily News Staff Writer

Outraged oldies fans can wave some bitterly ironic numbers today as they gather outside the WCBS-FM studios protesting the station's recent switch to the "Jack" format.

Arbitron ratings released yesterday for March-May, the last three months when the station played oldies, showed WCBS-FM (101.1) up more than 10% among 25- to 54-year-olds.

That choice demographic is where management felt WCBS-FM's appeal was eroding, which is why it dumped oldies June 3 for the younger-targeted Jack.

Fans of the oldies format have blasted WCBS-FM for abruptly dumping music that had been on the air since July 1972 with iconic deejays like Bruce (Cousin Brucie) Morrow and Harry Harrison.

"Not all city radio stations feel like a part of the city," said radio veteran Jonathan Schwartz yesterday. "WCBS-FM did."

Today's rally is scheduled to begin at 11:30 a.m. outside the station's studios at 1515 Broadway.

The goal, organizers say, is not to bash Jack, but to get their oldies back - though that's likely to be a long shot. WCBS-FM's parent Infinity has started Jack in several cities and CEO Joel Hollander told CNBC last week that Infinity will be "better served financially in the long run" with Jack.

As heard on 101.1 FM, Jack is a wise-guy format with no deejays that uses the slogan "Playing What We Want." So far that has mostly been rock songs from the '70s and later.

Arbitron figures yesterday showed that for March-May, WCBS-FM rose from 2.8% of the 25-to-54 audience to 3.2%. Arbitron's ratings can have month-to-month blips, but fans are likely to see this number, plus a rise in the station's overall audience share from 3.3% to 3.5%, as proof that oldies was a solid format.
While there has been no indication whether any WCBS-FM deejays will attend today's rally, all have expressed sympathy for disenfranchised listeners.

"This was cold and surgical," said Morrow. "WCBS-FM was a unique station in a unique market, and this decision did not serve the public, which is what owners of public airwaves are supposed to do."

And very little of it is of relevance to rural residents in the Third World, such as Latin America. Which is why it is almost as difficult to find an SW receiver at retail there as it is in the USA.

Stop there... 10% change is within the margin of error of the Arbitron
trends.

Move on, nothing to see.

Your view is just to extreme. There is plenty on SW of relevance to
people in central and south America. How can world events not be?

You might want to reevaluate your attitude as it is downright dour.

Very little of interst to rural residents in Latin America can be found on
SW. First, such folk are generally only Spanish or indigenous language
speakers (such as the Quechua and Aymar� and Guaran� speakers of the Andean
zone and Paraguay. Second, rural residents are very poor, wtih annual
incomes of less than $600 on the average, where a SW receiver is generally
not an option. Third, international broadcasts have very little that affects
local life in rural Latin America, and nothing to do with the cultures of
those areas.

Even in metro areas, there is very little if any use of SW. In the 60�s, I pored over radio audience research in Quito and Guayaquil, and in the late 70�s in a variety (over 12) of other countries. In some cases, like Quito and Guayaquil, in 60,000 interfiews in late 1968, not one mention of any SW station was made! At that time, Ecuador had over 100 SW stations, most of which are gone now... I wonder why? Based on that, I cancelled a licence I had as I realized running a SW transmitter only benefitted the Empresa El�ctrica Quito, S.A.

> 
> You might want to reevaluate your attitude as it is downright dour.

Dour? No. realistic? Yes. There is a reason why more than 2/3 of Latin America�s SW stations have disappeared in the last 30 or so years.

They might have one radio per village, or something. I remember seeing pictures
of rural folks all gathered around the radio, listening. But that was
years ago, though...

The Station Formerly Known as 92.7 Lite FM has made some interesting changes.

With studios in Thousand Oaks (Ventura County), they broadcast there on KMLT/92.7 and they simulcast in Orange County on KLIT/92.7 (Fountain Valley) and here in my neighborhood on KELT/92.7 (Adelanto).

Recently they changed names from Lite FM to Jill FM. I assume that this was done to emphasize their marketing efforts towards their target demographic.

They are also sporting a much larger playlist these days. A lot of the new stuff consists of songs I dislike, but hey, I'm not female, and therefore I'm pretty sure I'm not representative of their audience. :) I do give them lots of credit for starting to play a larger variety of music, something not enough radio stations do these days. They seem to be sticking within the soft-rock genre that Lite FM has had for years, but they now have far less repetition.

But the most interesting change is the acknowledgement that they can be heard in more places than just Ventura County and extreme northwest Los Angeles County.

Previously, you could listen to Lite FM all day and not realize they serve more than one small chunk of SoCal. Ads were for local businesses, a large portion of which are in and around Thousand Oaks. Public service announcements focused on Thousand Oaks and surrounding communities like Calabasas, Woodland Hills, and Agoura Hills. The only tipoff that they serve more than just Greater Thousand Oaks came at the top of the hour, when they'd ID all three stations.

But this past week, I was flipping between radio presets trying to figure out if there was anything decent on the radio, and I heard something about my new home, Apple Valley... over a hundred miles northeast of Thousand Oaks! It turns out that they are now doing community announcements for all of the areas they serve. This time they were doing the Victor Valley. Next hour, they announced, would be Orange County (and I assume the following hour would be Ventura County).

That's cool. It's nice to finally get an on-air acknowledgement that I, as a listener out here in the Victor Valley, actually exist. I wonder if they're selling ads out here now. I was told previously by sales reps at the station that they were focusing on the Thousand Oaks area, and it just seems silly to me to be utilizing the Orange County and High Desert frequencies and not selling ads here. After all, it *does* cost money to run the equipment and pay the FCC for the licenses, doesn't it?

I guess we'll see if this area becomes more than a bastard child for Jill FM. When I ended up talking to the station's staff, it was because their Adelanto transmitter went down for a couple days... I basically just called to let them know they'd been down and that there were actually people out here trying to listen to them. :)

A shortwave broadcast is "relevant" to anyone who's interested in listening to it, regardless of culture. It might be hard to find SW receivers, but it sure isn't hard to find stuff on shortwave. Like I said, at night the bands are bursting at the seams.

```

Your attitude about the future of SW in a Usenet SW radio hobbyist news group is gloomy and unfriendly where enthusiasm about the hobby is the norm and you stubbornly extend some economic study on the commercial viability of a SW station you made to mean any use of SW in south America is a wast of time. Dour? You bet. Realistic? No way.

I hear many broadcasts in spanish where the listing show SA as the target. I guess nobody is listening to any of them.

Off the top of my head:
I have heard news about the world bank loans to South American countries and other news about the economies of those countries.
I have heard about South American politics.
I have heard stories about the coffee growers in South America.
I hear broadcasts to South America on religion, to many really!
I have heard about the rain forest destruction and the changes in the lives of the people living there.
I have heard about weather related news about storms and damage they cause.

I have been to both coasts on Mexico and saw short wave radios around. Mexicans I spoke to knew what SW was. I'm afraid all I can offer is my experience on the pacific coast of Mexico and the Yucatan on the atlantic side to your more extensive travels in central and South America but at least the people in those places knew what SW meant.

Live in San Diego and just came across an AM station that runs very, very, VERY few ads. (I guess you'd call it a Great American Song Book station: 1/2 Sinatra, the rest varied but similar genre.) Freq is 540, and I think it has a sister station, 1260.

What are the economics of this station. I don't see how it survives. Obviously, I am missing a lot -- am not familiar with the broadcasting world at all -- so can someone please clue me in.

Christopher A. Steele

It reminds me of an old Radio Peking QSL card I received years ago. The view was taken from inside a grass hut, looking out. You could see the workers in the fields. The hut had no furniture apart from a wok, a first aid kit, a transistor radio and a semi-automatic rifle.

Brad.

```

The reference is to rural Latin America, which you can see in the paragraph above. Except for Spanish and indigenous languages, there is very little usage of any other tongue in rural Latin America. And what is generally available in Spanish is limited, and either consists of local stations from other areas (declining) or mostly religious material. There is not a wealth of secular international Spanish broadcasting, and that which exists is often of little interest to the social and educational level of rural Latin America.

I never saw that in Latin America. And I built my first station there 41
years ago. In the last 3 decades, AM FM receivers have been prevalent and
cheap: nearly everyone has one. AM & FM networking on a national level
brings good local signals to nearly all of Latin America, with no need for
SW, which is now a curiosity.

```

> America is a wast of time. Dour? You bet. Realistic? No way.

The fact is that you are hard pressed to find anyone who listens to SW, and
that is a reality. The reason whey there are less DXable SW stations in
Latin America is that the investment in same does not return benefits...
whether these be converts, sales or propaganda objectives. HCJB reduced its
operations in Ecuador when they moved from Pifo because they now believe in
many local stations and not as much in SW.
>
> I hear many broadcasts in spanish where the listing show SA as the
> target. I guess nobody is listening to any of them.

As far as I can tell, nobody is listening. It is easier today to get a SW
receiver in the US than Latin America. In the mid-60's, nearly all radios
had the bands. Today, FM blankets nearly every country, many with national
coverage nets that get, consistently and clearly, where no SW regularly got.

My main point is that most international broadcasts have no relevant
material for residents of rural areas of Latin America as they do not relate
due to social and educational considerations.

Little of the above are of interest to rural residents.

> I hear broadcasts to South America on religion, to many really!

That is the bulk of what is being heard.

> I have heard about the rain forest destruction and the changes in the
> lives of the people living there.

Zero interest to rural residents.

> I have heard about weather related news about storms and damage they
> cause.

Available much more specifically from local media.
>
> I have been to both coasts on Mexico and saw short wave radios around.
> Mexicans I spoke to knew what SW was. I'm afraid all I can offer is my

> America but at least the people in those places knew what SW meant.

But they don't use it. In the last year, in the Mexico City, Guadalajara and
Monterrey ratings, there was not one mention of SW broadcasts as being
listened to.... out of a sample of about 50,000 persons. This means that SW
reaches less than 0.01% of listeners in these cities with a combined

population of over 35 million.

These two stations (in simulcast) are owned by Saul Levine's Mount

Wilson FM Broadcasters. He's made something of a hobby changing formats on 540/1260 to react to other changes in the market... they're running standards now in anticipation of Clear Channel divesting standards XETRA/690 Tijuana (the U.S. programming and sales rights, that is), which will turn into a Spanish-language news/talk station the next couple of months. (690's format used to reside on 570, until they moved the old 690/1150 sports format to that station.)

Anyway, Saul's not making his bank on 540/1260. His "big" station is classical KMZT/105.1, which is the moneymaker and allows him to play on the AM band, as it were. The 540 and 1260 signals are not really powerful enough in the market to put any major effort into selling them against powerhouses like KFI, KNX and KABC.

Saul also owns KMZT/1510 in the San Francisco Bay Area, which has been through nearly as many formats as 540/1260 in SoCal. Since 1510 is about to be spun off to Mapleton Communications as a simulcaster for eclectic Americana KPIG/Freedom, CA, they put the standards format there, too, at least for the next week or two (since 1510 is basically programmed out of the 540/1260 facility and often programmed with the same format as its SoCal cousins).

FCC records disagree with you.  1260 (KSUR) is owned by Mt. Wilson FM
Broadcasters which is owned by the Levine Family Trust.
Mr. Newhart is not mentioned anywhere in their "ownership report" as
filed with the FCC.
Sorry.

Charlie, the old engineer

You many be thinking of 1290 in Santa Barbara, once known as "KBOB" --
Newhart owned it for a few years, then sold it a year or two ago.

By David Hinckley
Daily News Staff Writer

28 June 2005

If anything could be scarier than Tom Cruise's just-ended promotional tour for his flick "War of the Worlds," which opens tomorrow, it might be the original "War of the Worlds" radio broadcast on Halloween night 1938.

Tomorrow afternoon at 3, then, WNYC (93.9 FM) will run a Radio Lab special called "Look Out ... Martians!," which will recount the story of that first broadcast and look at subsequent re-creations that have had tragic consequences.

Orson Welles' original production had fictitious radio news announcers breaking into a music program to say Martian invaders had landed in Grovers Mill, N.J. By show's end, the Martians had decimated New York and, according to legend, a million Americans mistook the show for legitimate news and panicked accordingly.

There are conflicting reports about the exact extent of this panic.

But the WNYC special, which features excerpts from the Welles broadcast, notes that knockoff programs led to a military mobilization in Chile and the torching of a radio station in Ecuador.

Hosting on WNYC is Jad Abumrad.

=========================

Canadian broadcasting news from : http://www.w4uvh.net/dxlatest.txt

=========================

## STATION NEWS:

570 (CKEK) BC Cranbrook. The 5 former "E-K radio" stations (the others being CFIW-1200 Canal Flats, CFEK-1240 Fernie, CJEK-1400 Sparwood, and CKKI-1460 Kimberley) have all gone off the air on AM and have been replaced by 2 FM stations. (TRH-BC)

580 CKXR BC Salmon Arm. Has not abandoned AM for 99.7 FM yet. Still //CKIR-870, CKCR-1340, CKGR-1400 with "EZ rock" slogan. (TRH-BC)

860 (CBRA) BC Revelstoke. CBC LPRT has moved to 91.3 FM. (TRH-BC)

880 (CKKC) BC Nelson. Web site implies the station is still on AM, but I did not log them from nearby towns, so they have either moved to FM (106.9?) or they are getting out very poorly. Sister station CFKC-1340 in Creston is still on AM but getting out poorly. The mountains in this part of BC seem to make for very poor coverage. (TRH-BC)

940 (CJIB) BC Vernon. Has moved to FM. (TRH-BC)

970 CFXE AB Edson - (ex-CJYR). The former Yellowhead Radio stations are now "the fox". 2 of the stations (Hinton and Jasper) have moved to FM (CFXP-95.5 Jasper, CFXH-97.5 Hinton), one (Edson) has a CP to FM, and the other (CFXG-1230 Grande Cache) is apparently remaining on 1230 AM for now. I assume this is where things will remain for a while, since they have had their vans re-stenciled with this information. Slogan is "the fox, playing all kinds of stuff." (TRH-AB)

1050 (CICF) BC Vernon. Has moved to FM. (TRH-BC)

1150 (CBTK) BC Midway. There is no CBC LPRT in the town of Midway in southern BC near the Okanagan Valley. Maybe there is another town called Midway in some other part of BC? (TRH-BC)

1200 (CFIW) BC Canal Flats. Old "E-K radio" relay is off; I think I read something about a new licensee wanting to restart the 1200 operation, but it was definitely not on when I drove through Canal Flats this time. (TRH-BC)

1230 (CBPB) AB Athabasca Falls / Columbia Icefields / Maligne Canyon - I had seen some reports from as recent as 2002-2003 indicating these stations were back on the air after years of non-operation, but unfortunately this is not the case. Unlike Banff, I did not notice any new FM stations to replace them. (TRH-AB)

1230 (CBPG) AB Banff East Gate / Banff Townsite / Castle Junction / Saskatchewan Crossing - These have been permanently replaced by a single set of stations in Banff (101.1 English, 103.3 French). (TRH-AB)

1230 CFXG AB Grande Cache - (ex-CIYR1) This one is still on 1230 AM but gets out very poorly. I could only get an occasional bit of music //95.5 FM from Jasper, and even then not enough to be 100% sure. (TRH-AB)

1230 (CIYR) AB Hinton - Has moved to 97.5 FM and is now "the fox". (TRH-AB)

1230 CBPD1 BC Rogers Pass (Glacier Park) - This station, which was seemingly abandoned at least 4 years ago, is actually still running OC from the visitor center at Rogers Pass. (I was staying in the lodge about 100 feet away so it was unmistakable; the carrier could be logged for about 2 miles SW on Highway 1 but hardly at all to the east due to steep mountain blockage). Nothing on 1490 to go with this one. (TRH-BC2)

1230 (CB??) BC Yoho National Park - These stations are long gone. (TRH-BC)

1240 (CFEK) BC Fernie. Replaced by FM station. (TRH-BC)

1340 (CKGF) BC Grand Forks. Has moved to FM. (TRH-BC)

1350 (CBKI) BC Valemount. Moved to 90.3 FM. (TRH-BC)

1400 (CJEK) BC Sparwood. The 5 former "E-K radio" stations have all gone off the air on AM and have been replaced by 2 FM stations. (Note there was also a listing in some sources for an E-K radio station in Sparwood on 1440. This appears to just be a typo for CJEK-1400. Sparwood is a rather depressed mining town which seems to be losing the battle for tourism dollars to Fernie to the west and the Crowsnest Pass region to the east, so a new AM station there seems unlikely). (TRH-BC)

1450 CBXC AB Coleman. This one is listed on some web sites as "Northern Alberta", and the call signs make it sound like a CBX relay, but it is in fact a CBR relay in the Crowsnest Pass area of SW Alberta. This one seems to get out only to the east and west, which is not surprising given the surrounding terrain. (TRH-BC/AB)

1450 (CKYR) AB Jasper. This one has moved to 95.5 FM where it is now CFXP "the fox." Jasper is a nice place to DX, having only one local (on 860), which is in the process of moving to FM. (TRH-AB)

1450 CHOR BC Summerland. Still active but is now "oldies 14-50" and occasionally the same feed as used by CKFR "oldies 11-50." Owned by "Standard Radio Group." No longer //the other Okanagan Radio stations on 800, 1240, 1400. Seemed a waste to have all these stations in the same market running the same programming. (TRH-BC)

1460 (CKKI) BC Kimberley. The 5 former "E-K radio" stations have all gone off the air on AM and have been replaced by 2 FM stations.

(TRH-BC)

1490 (CBPB) AB Athabasca Falls / Columbia Icefields / Maligne Canyon. I had seen some published reports from 2002-2003 indicating these stations were back on the air, but unfortunately this is not the case. Unlike Banff, I did not notice any new FM station to replace them. (TRH-AB)

1490 (CBPG) AB Banff East Gate / Banff Townsite / Castle Junction / Saskatchewan Crossing. These have been permanently replaced many years ago by a single set of stations in Banff (101.1 English, 103.3 French). (TRH-AB)

1490 (CJPR) AB Blairmore. Has moved to 94.9 FM. Sister station CJEV Elkford, BC remains on AM. (TRH-AB)

1490 (CBPN) BC Golden. The station appears to have been permanently replaced by a programmable sign that gives up-to-date highway information. (TRH-BC)

1490 (CBPR) BC Revelstoke. The station appears to have been permanently replaced by a programmable sign that gives up-to-date highway information. (TRH-BC)

1490 (CBPC1) BC Rogers Pass (Glacier Park). Nothing here despite the OC on 1230. (TRH-BC)

1490 (CB??) BC Yoho National Park. These stations are long gone. (TRH-BC)

1610 -- BC Kelowna. 6/6 1250. Talking house noted along highway 97 east of Pandosy Rd. (TRH-BC)

The following CBC LPRTs were noted on AM:
740 CBKR BC Parson.
740 CBUN BC Salmo.
860 CBXB AB Banff (reportedly seeking a move to FM).
860 CBXJ AB Jasper (has already started simulcasting on 98.1 FM, so expect this one to go away soon).
860 CBRD BC Field.
860 CBRJ BC Grand Forks.
900 CBWD BC Donald.
900 CBRK BC Kimberley.
1450 CBWI AB Grande Cache.
1540 CBXD AB Edson (? - Barely audible from Hinton this time; was audible from Jasper on my previous visit in 1999).

The following 2 Environment Canada stations are active and getting out well (both provide English and French language weather):
1260 CBPM BC Sicamous.
1580 CBPK BC Revelstoke (signal gets as far as Jasper, AB at night).

REGULAR LOGGINGS:

570 CKSW SK Swift Current. 6/10 1725. Audible midday from Sulphur Mountain. "Your home for country music, CKSW." (TRH-AB1)

610 CKYL AB Peace River. 6/13 0025. "Alberta's country giant, YL country." (TRH-AB2)

610 CHNL BC Kamloops. 6/5 0511. "Celebrating 35 years of playing your favourite oldies, radio N-L, the greatest hits of all time." (TRH-BC1)

620 CKRM SK Regina. 6/10 1648. Poor signals midday on top of Sulphur Mountain in Banff. Local ads and ID. (TRH-AB1)

650 CKOM SK Saskatoon. 6/10 1722. Ad for Fuddruckers, promo for Larry Boortz show, and ID. Audible midday on top of the mountain. (TRH-AB1)

1050 CJNB SK North Battleford. 6/10 0210. Country music, "the best country back-to-back on CJNB and CJNS." (TRH-AB1)

1210 CFYM SK Kindersley. 6/10 0215. "Classic hits 13-30 and 12-10, a Golden West radio station." (TRH-AB1)

1340 CFKC BC Creston. 6/18 1813. "KBS, Kootenay's all-hit music station." Still active but gets out poorly with their 250w. Only seems to get out to the south (TRH-ID).

1340 CJEV BC Elkford - Station is active //CJPR-94.9 (ex-1490). Slogan is "Cat country / mountain radio." Ironically, one of the promo announcements said "when you hear good country music, you know you're in Alberta." I guess they forgot they have a sister station in BC. There does not seem to be a studio for CJEV in Elkford though the transmitter is definitely in that area. The local Chamber of Commerce had not heard of CJEV and they were not in the local phone book. Gets out reasonably well to Sparwood, and some times to points further east and west such as Fernie, BC and Bellevue, AB. (TRH-BC)

1340 CIVH BC Vanderhoof. 6/11 0929. A nice surprise on the car radio at sunrise as we drove into Lake Louise. Still "97 FM the wolf" //CJCI. (TRH-AB)

1450 CBWI AB Grande Cache. 6/14 0140. Fair with classical music feed //local 860 station. (TRH-AB2)

I was originally planning to ship the big Kiwa loop like I did on my Alaska trip in 2003, but at the last minute I bought a suitcase big enough to safely take it with me (I almost paid for the suitcase with the savings in shipping charges). With the laptop, radio, 2 antennas, digital voice recorder, 2 cell phones, camera, batteries, and extension cords, my carry-on and checked luggage contained a ton of metal. This was enough to earn me a "pre-flight massage" on the way up and a TSA baggage inspection on the way back.

Conditions in Trail, Kelowna, and Rogers Pass, BC were pretty poor due to the very high mountains and very steep narrow valleys (like Alaska, there is no trace of sunset enhancement; the stations just drop in all at once shortly after dark). Conditions were much better in Jasper, Banff (Johnston Canyon), AB, and Radium Hot Springs, BC. Jasper is getting to be an especially nice place to DX now that the local on 1450 (and the 1230 station in Hinton) are gone. Not much to hear during the day in BC and AB unless you get on top of a mountain. Daytime is best spent photographing critters, which were out in abundance this year: black bears, elk, mountain goat, bighorn sheep, and mule deer (all with babies) plus "moose and squirrel" for the Jay Ward fans. :)  73, (Tim Hall, ABDX via DXLD) See also U S A

** CANADA. Canadian Coalition Wants Pay-Radio Ruling Overturned --- Glenn, Apparently not everyone in Canada is happy about satellite radio coming to their country. I found this article on Yahoo Canada:

QUASH CRTC PAY-RADIO RULING, UNIONS AND ARTS GROUP URGE FEDERAL CABINET --- MARIA BABBAGE Mon Jun 27, 3:29 PM ET

TORONTO (CP) - The federal government must overturn a regulatory ruling allowing satellite broadcast operators to bring pay-radio services into the country if it wants to preserve years of effort to protect and promote Canadian programming, a coalition of media and labour groups said Monday.

The coalition is asking the Liberal cabinet to overturn the June 16 ruling by the Canadian Radio-television and Telecommunications Commission, which it says will eat away at Canadian content on the country's airwaves.

"It's a slippery slope," said Ian Morrison of Friends of Canadian Broadcasting, a non-profit media watchdog group.

"It's taken decades to build up the Canadian content regime in this country. . . . By the stroke of a pen the CRTC is now saying that pay radio can be delivered at a content level of only eight per cent Canadian."

The ruling cleared the way for two groups, Canadian Satellite Radio and Sirius Canada, to provide pay-radio service - long in existence in the United States - to the Canadian market via satellite.

Canadian Satellite Radio is a partnership between Toronto businessman John Bitove and Washington-based XM Satellite Radio Holdings Inc.

Sirius Canada is a joint venture of the CBC, Standard Radio and U.S.-based Sirius Satellite Radio Inc. . . . [more]

(via Steven Cline, Indianapolis, IN, DXLD)

** CANADA. ARTISTS FIGHT SAT RADIO IN CANADA

Arts groups are fighting satellite radio's move into Canada, asking the Canadian Governor in Council to set aside or refer back to the Canadian Radio-Television and Telecommunications Commission its decision to allow the subscription-based services into the country.

The coalition of arts groups made the request in a letter sent to the federal cabinet Monday. Groups signing the letter include the Canadian Independent Record Production Association, Directors Guild of Canada, Friends of Canadian Broadcasting, National Campus and Community Radio Association, Songwriters Association of Canada and the Writers Guild of Canada.

In a statement it released on satellite radio's north of the border moves, the Songwriters Association of Canada pointed out that current broadcast regulations require a minimum of 35 percent Canadian content on most stations while satellite radio companies will be required to program only one Canadian channel for every nine American channels. The association said that amounts to less than 10 percent.

"The Songwriters Association of Canada believes that this massive reduction from current standards could have a profoundly negative impact on musical arts and culture in Canada," the organization said.

Friends of Canadian Broadcasting said the CRTC decision to allow satellite radio into the country runs counter to the country's Broadcasting Act and Canadian Parliament's goal of ensuring Canadian programs are predominant on Canadian airwaves.

"This decision does not reflect the legal requirement that Canadian broadcasters must offer homegrown programs. (The decision) creates a pipeline for U.S. radio programs direct to Canada, with little in return for our country" said Friends spokesperson Ian Morrison (From today's SkyReport.com via Joe Buch, June 28, Swprograms mailing list via DXLD)

Last I checked, terrestrial cross-border broadcasting does the same thing in effect. I suppose they can argue that licensing it is different than just acknowledging the laws of physics. But maybe they should check the estimates on gray market subscriptions. Something is better than nothing --- and nothing is what they receive with the gray market approach (John Figliozzi, NY, ibid.)

London Evening Standard,
30 June 2005

The iPod has revolutionised the music industry - now it is set to take on the world of radio. New software released today by Apple, the company that produces the iconic MP3 player, allows owners to download radio programmes.

Experts say it could change the face of broadcasting forever. James Beechinor-Collins, editor of gadget magazine T3, said: 'This is really going to be something of a saviour for many radio stations.

'The key is that this is easy enough for any iPod owner to use. There are certainly enough big stations, for instance the BBC and Virgin Radio, to make this a success. I think we will also see a lot of smaller stations thriving because now they have a whole new audience.'

The podcasting idea was tried out by the BBC late last year, using Melvin Bragg's Radio 4 programme In Your Time. More than 70,000 people downloaded the show and the BBC now has dozens of shows available for download, including Radio Five Live's Sportsweek and the 8.10am main interview on Radio 4's Today Programme.

Today's announcement from Apple means online listening figures are set to rocket as previously iPod owners had to download separate podcasting software to download shows.

Currently the podcasts are free. However, Mr Beechinor-Collins believes Apple could soon charge for some shows. He said: 'Commercial stations may well be looking to charge for shows in the same way Apple charges to download a song.'

Apple hopes that by making it easy for users to download the programmes, it will drive more traffic to its online iTunes Music Store, where the company has over 3,000 free podcasts available.

How it works

1. iPod owners choose the shows they want to listen to from a list of over 3,000.
2. iPod is plugged into computer.
3. Software automatically downloads the latest available version of the radio show, and copies it to the iPod.
4. User listens to show as if it were a normal iPod song. They can pause, fast forward and rewind.
5. When iPod is plugged back into computer, it checks to see if there is a new version of the show, and downloads it if it is.

Which brings to mind... whatever happened to the shortwave outlet of the college radio station in Mexico City?  They were on the air just a few years ago.
--scott

I think what will keep shortwave going is that it's fairly inexpensive to hang a small shortwave outlet off an existing station or network.  Even if you are broadcasting primarily on a network of FM stations, hanging a small 1KW shortwave transmitter off your net adds fairly minimal cost and these days pretty low maintenance.  It doesn't get you a huge audience, but that's okay.  I think the 250KW powerhouses are doomed, though.

The former KNX-FM 93.1 has adopted the Jack FM format also. Evidently they pay a license fee for its use. LA Times reviewer said it sounds like a beer-joint jukebox.

Operating an international shortwave station requires a huge budget. Governments and religious organizations have had the budgets and the missions historically to run them. There have been commercial broadcasters, such as WRNO and WNYW, but they have either folded or taken to renting their facilities to religious and political broadcasters. International shortwave, once popular in the 1930's in the U. S., only has a few American enthusiasts. International broadcasters know that, and have redirected their programs to satellite and internet streaming. Shortwave is still popular in the Third World, and there will be stations to satisfy that market.

The tropical shortwave station, usually operating in the 90 or 60 meter band, is generally a domestic broadcast taking advantage of lower static interference and a larger coverage area. Here too, in some countries, it is giving way to FM on vhf frequencies.

- Amen!

do like the variety of Shortwave;

Planet World News on WBCQ was pretty good..
BBC Radio, China International,
Radio Canada, Radio New Zealand, Radio Australia..
Heck ! Even WWCR & ALEX Jones have something to add..

As a Kid I read George Orwells "1984"  ( maybe onece too often)

In 2005 we have Fox News & "BubbleVision" ( FNN) filled with Models
reading off teleprompters & Smug men with Dyed brown  hair..

Heck, give me "Financial Survival 2000" anyday..

Last chance, SUCKA(S)!

Partial ownership in new UHF LPTV station in Rehoboth Beach, Delaware. This is possibly the wealthiest small community in the nation!

Joint venture. There is an element of risk and you could lose all or part of your investment. You heard it first here, kiddies! LOL!

Active or inactive investors with at least $10,000 each are welcome.

Please request free copy of the Business Plan/Executive Summary. It will be sent as an email attachment in Word (doc)file format.

Tel: (478)741-1710 in Macon, GA

Please feel free to call anytime. Caller ID must NOT be blocked. I will respect your privacy and NEVER call you back if you express a lack of interest.

The CP is for channel 59, 20,000 watts ERP with 2 degrees of downward beam tilt. 24 hour license. (All TVs are, idiot!)

The proposed station will place a grade "A" coverage over Rehoboth Beach, Dewey Beach and Lewes. All in DE.

References:

1-My parole officer. Mr. Larson E. Rapp. c/o Zing Zing prison, Ossingstink, NY. Tel: 1-800-IMA-THUG.

2-Trade reference....Brazilian Bandit airways. Oshkosh Airport, Oshkosh, WI. (You EAA will get it!). Purchased a one-way ticket to Rio using all small and unmarked bills. Don't worry, the trip will not commence until we have investor's funds!

Greetings Mike!  No articles just my 2 cents worth.  Most people when asked this question think only in terms of the USA.  At 300 million population we are a drop in the bucket.  Shortwave will continue, but the market and target audience will change IMHO. We are seeing the table top radios of yesteryear gone as the largest world markets cannot afford them. Hense, the rise in the cheap portables that are flooding the world market.  The far east and Africa will, and are becoming the target audience as they are growing faster, and are more politically unstable.  Every nation or interested party wants to get their voices heard in those regions.  Let me not forget central and South America as well.  Long live shortwave I think.  The real question is what will it look like even ten years down the road.  Have a great week!  Jon.

I listened to CBS - FM for most of it's 33 year run. Infinity has flipped the bird at it's audience, and it's employee's. The fact they aired the Mickey Dolenz in the morning show at B.B. Kings in New York to celebrate the airing of thier 100th show, only to pull the plug on them that day, was the ultimate kick in the crotch. I for one would never trust them again regardless of which side of the dial you are sitting. I'm finished with them.

I sincerely hope it has.

For many, shortwave is the only place to obtain uncensored news. Governments don't like such freedom of information, which is why we should.

I"m  not sure if this article will make it to rec.radio.broadcasting
as I'm not sure how to email articles for moderator approval these
days.  HOwever here are my thoughts, so I hope you read the other
groups you crossposted to.

sHortwave will still have a decent future ahead, especially for
broadcasting in most of the developing world.  YOu see streaming audio
and net connections are not as ubiquitous as some of us might think.
I still listen to the BBC now and then and other broadcasters over a
radio, not through a net connection.  for many in the developing world
technologies such as the freeplay crank it up radios will offer
shortwave where a net connection is not available to them.

See back issues of POpular COmmunications and read the appropriate
columns for similar views.  I don't have links, I read the magazine.

I'm sure I'm going to get flamed for it, but here goes anyway.  I was truly disappointed by wcbs changing formats without notice, effectively killing a landmark of NY (and apparently killing another landmark in chicago at the exact same moment).  But I at LEAST have to give them credit for letting wcbs continue on the web.  If this happened 10 years ago, that would have been it.  But at least it has the web going for it.  No?

Remember the CB craze of the 1970s? It became insanely popular for a while with a very wide audience, but then the sunspot cycle created horrible conditions, and the faddists went somewhere else. The CB survived, though, and even in these days of GPS and satellite and internet, there's still nothing better for truckers and other interstate drivers than the old familiar CB. I listen to channel 19 all the time, and it's just as busy as ever before. CB is not about to go anywhere.

Neither is shortwave. I think shortwave is in a decline, but I think it will survive and even flourish over the next few decades. I don't know who will be on the SW band in 10 years, but I'm sure someone will be smart enough to realize what a powerful medium radio can be.

That station has not been KNX FM for decades. It was a 70's rock format for
about 10 years.

Our local cable company, Comcast, doesn't carry FM radio signals; therefore, I'm trying to improve my FM reception on my home receiver. I've had separate VHF and UHF antennas up for HDTV several years. They work wonders for HD and even analog TV, but the FM element on the VHF yagi surprisingly doesn't pick up much. Part of my problem is that I'm on an east facing hillside in the foothills directly north of one major metro market area and directly west of another. Despite that, I don't understand why I can get decent TV reception but no FM.

After limited success with a homebrew folded dipole, I picked up a high gain three element FM yagi. No matter where I seem to point it, I'm not getting any more signal strength than with the dipole on the back of the receiver. You'd think that aiming it east, southeast, or south towards all those transmitters would pull in something, but gain is very weak. However, if I point it northwest, at about 45 degrees up the hill behind me, I can actually pull in a few decent stations. Aiming the antenna in the opposite direction of the stations just seems contrary to logic. I understand that ground waves travel parallel to the earth, but could the signals be bouncing off the hillside too, acting like a huge reflector?

The thing that really gets me is that I can get excellent reception on all stations in my car sitting in the driveway, and driving around. Therefore, I'm thinking of dumping the yagi and trying to find or build a vertically polarized omni antenna. My car antenna does happen to be mounted at about 45 degrees. Any ideas on what might be going on, and how I might improve my reception? Any antenna designs and dimensions would be helpful. I guess worst case scenario is I can go down to the auto parts store, by a car antenna, and put it on my roof.

Please help. Many thanks!

-Bob

Let me understand this. You grew up with WCBS-FM but no longer listen
to it yet you want it to stay around just because you know it's there.

You abandoned them. Even worse, you got older and ceased to be of any value to them. That should be the slap in the face. There are many things in life that we abandon yet retain fond memories. Is Viacom obligated to keep WCBS-FM in perpetuity or just until you kick the bucket?

I'm sure this decision was carefully made by the TV folks running Infinity. I'm sure they'll give the format time (2 years) to grow and prosper. I'm sure they won't adopt the TV habit of changing programming every 6 months.

Have faith that "iPod on Shuffle" is just the awesomely creative new format radio needs.

Rich

While sorting thru messages on this NG, I found a really old message from a college student asking how to get his Big Radio Break. While the original post is years in the past, his questions hit a nerve with me, and I would like to offer my own experience for all who may follow.

I always loved radio, from the time I was a little squirt listening to the old WZGC/Z-93 of the 1970s. I was still very young when I decided that radio was the career for me. I even put together a makeshift studio in my bedroom and practiced, practiced, practiced!

When I graduated from high school I enrolled in a community college that had a very specific Radio and television Broadcasting degree program. I wound up on the air at the college's radio station within the first few months, and a buddy of mine and I ended up running the station shortly thereafter.

We flipped the format to mainstream CHR and sounded as good as the big-boy stations downtown. Our demo tapes always sounded unbelievably smooth, and program directors admired us for taking on a commercial bent when most college station were just screwing around with obscure college music and not really trying.

I really thought I was going all...the...way...to...the...top!

Boy did I have absolutely NO EFFIN' IDEA how frustrating the radio business would be. It started when others at the college station started landing paying jobs without finishing their degrees. Not that I was mad at the people that got the breaks, because I sure would have taken one too if I had gotten one. I was mad at the managers and programmers that held all the cards and made those decisions. It really wasn't fair, since I worked hard and helped run (and program) the freakin' station that started many of those careers. If our station hadn't insisted on structure and professionalism (which shined thru on those demo tapes) they wouldn't have gotten those jobs.

I did an internship at one of those big-boy stations for three months (helping a young Ryan Seacrest, who was only 16 and on the air already) and was told by the program director that when I finished my degree (which was about five months away) that I should come back and see him about joining as his assistant PD. I was excited and kept in touch with him, until he was canned two months later. When I called other contacts at the station, I was persona-non-grata. "Don't call us, we'll call you."

I continued to work on the air and program at the college station, all the while compiling and mailing tapes and resumes to any and every station in the area. I finished my degree and took a joe job while I continued my search and my college radio career, although I was no longer a college student.

After another four months or so, I got a call back from another one of the big-boy stations about one of my tape and resume packages. FINALLY!! They said they'd like me to drive the station van and assist the DJs at live remotes, parties, station functions and such. I was cool with that, it sounded like the elusive "start in radio" I had wanted. So I asked THE question..."How much does it pay?" And the guy laughs...LAUGHS!!! And he says, "It doesn't pay anything. It's an internship." Oh, man, I came unglued! I cussed and spit and yelled "I'M NOT WORKING FOR FREE!" Man, I'd done three years for free at the college station and a major-market internship too. I yelled, "MY DAYS OF WORKING FOR FREE ARE OVER!!" and hung up on him. What a prick!! And I don't regret it a bit.

Then there was the icing-on-the-cake incident several years later where one of my old college radio cronies was programming a station and he asked me if I'd be interested in overnights. HELL YEAH!! So I went over and filled out the paperwork and met the station manager. I was unemployed at the time and I turned down a couple of offers for joe-jobs that paid more than this overnight shift did. But it was my "Big Radio Break!" Except that the station manager went and hired a buddy of his for the shift instead and left me out in the cold. AGAIN. And for the last time.

So, in my experience, there are no "Big Breaks" in radio, and working for free gets you nowhere either. So "volunteer" all you want but be prepared to become a career volunteer.

And watch out for the general managers of this world. They are usually lying snakes.

Thanks for the many comments which have been posted, they are really interesting and helpful for my research, if you have not posted your view yet on the
the future of shortwave as a broadcast medium I would be very interested to read them.

Thank you all

Mike

I suspect that your home FM radio is very insensitive.  Car radios are usually very good since you drivee through all the worst-signal places.  Your home radio is either a poor design or is sick.  Sit it on top of your car and put a 19-inch wire on the "hot" antenna terminal.  It should receive about as many stations as the car radio. If it doesn't, get a new home radio - it would likely cost too much to fix what you have even if you could find someone who thought they knew how to do it.

I wouldn't worry about antennas until the above test showed that the radio works well.

I have had some experience with rooftop antennas when I lived in Troy, NY. During the early 1970's there were not too many local FM broadcast stations in the area. When I put up the antenna, I was receiving signals on a regular basis up to 125 miles, and sporadically up to 200 miles. As the number of local stations increased, my ability to receive distant signals decreased. This was both from the fewer number of channels unoccupied by local stations, and the tendency of strong signals to desensitize my receiver. I used a rather lengthy Channel Master Yagi FM antenna, which I don't think is still on the market.

Perhaps you are in an area with strong local FM signals. You should try to drive around and see where you can pick up distant signals from your car. As an example, the Poughkeepsie / Kingston, NY metropolitarian area has only one or two UHF TV stations, but many local FM radio stations. Most residents rely on cable TV for stations from New York City or Albany, NY.

In the US of A shortwave broadcasters are people with a mission of
some sort or owners who sell block time to such people.  I don't see
that changing very much.

Even some people with a mission have dropped out.  An example is the

Christian Scientists.

Arrow 93.1, playing "classic rock".

KNX-FM was back in the late 70's early 80's, up to 1984(?) when it
experimented with a CHR format. Didn't it do a stint as oldies (KODJ)
too?

P.S. I just can't get into Jack....on the one hand you have KRTH, which
has
a very limited library....but Jack has the opposite problem--it's all
over
the map!

Toronto
June 10 2005

A ruling from the CRTC that could have a major impact on radio broadcasting in Canada will be handed down next Thursday afternoon.

The Canadian Radio-television and Telecommunications Commission will announce its decision on three licence applications before it for subscription-based digital radio services.

Two satellite-delivered pay radio options have been operating in the U.S. for several years and both have entered into partnerships with domestic enterprises to apply for a similar service in Canada.

Canadian Satellite Radio (CSR) is a consortium involving former Toronto Raptors owner John Bitove Jr. and Washington-based XM Satellite Radio Holdings. The

CBC and Standard Radio, meanwhile, partnered with XM's American rival Sirius Satellite Radio (to which shock jock Howard Stern is moving for its minimal regulatory oversight).

A third option, from CHUM Ltd. and Montreal-based Astral Media, adds an interesting twist. It would forgo satellite delivery for the time being and proposes to deliver pay radio to consumers via a series of broadcast towers instead.

The services would offer between 60 and 100 commercial-free channels of music of various formats for a monthly fee, probably between $10 to $15.

Ian Morrison, spokesman for Friends of Canadian Broadcasting, says the watchdog group supports the CHUM/Astral application because it is compliant with the Broadcasting Act requirement for a significant level of Canadian programming.

"CHUM can look the CRTC in the eye and say `We're doing what Parliament intended,''' notes Morrison.

Kevin Shea, president and CEO of Sirius Canada, says if approved they could be up and running this fall.

"Our application said we'd be a little over a million subscribers after seven years and I wouldn't be at all surprised if we got to that number in about four years,''
says Shea, noting that a satellite grey market for U.S. pay radio has already sprung up in Canada.

Paul Ski, executive vice-president of radio for CHUM Ltd., says that unlike the other applicants, CHUM will program all 100 of its own channels, with each of them carrying between 20 and 35 per cent Canadian content.

"All of our channels, every one, will have Canadian content on it.''

Stephen Tapp, president of Canadian Satellite Radio, says a lot of great artists aren't played on FM radio across the country.

"With our proposed service ... a number of independent and other lesser-known Canadian artists who aren't currently getting airplay on commercial radio in Canada will finally have access,'' says Tapp.

But the choices still pose a dilemma for the CRTC.

The two satellite services would cover all of North America, including remote under-populated regions of Canada, while CHUM's land-based option promises much more Canadian content but, for now, only to about 75 per cent of the population via major urban markets (a satellite option is expected to be available by 2010).

Because XM's satellite signal hits Canada at a sharp angle, though, they would have to add some terrestrial towers of their own for repeater transmitters in high-rise city areas.

Morrison suspects that whatever decision the CRTC makes -- and especially if it tries to squeeze more Canadian content out of the Canada-U.S. satellite services -- someone will be upset enough to launch an appeal to the federal cabinet.

"If the bar is too low, we're upset, if the bar is too high, they're upset.''

There is also the slippery slope aspect. If the CRTC approves a service that delivers only five per cent Canadian content, the next time a conventional radio applicant applies for a licence renewal, he will question why he is still required to play 35 per cent -- a typical level for commercial radio.

On the other hand, some Canadian musicians like the idea of having their songs played on satellite channels that are available throughout the U.S.

All of this comes along at a time when broadcasters and consumers face a veritable soup of new audio broadcasting technologies. For years now, radio stations in major urban areas have been digitally simulcasting their regular AM and FM signals on an experimental basis.

DAB, or digital audio broadcasting, however, has shown no signs of taking off in the same way that high-definition television has. DAB tuners are scarce and deals to have receivers installed in North American-built cars have fallen through.

There's also music downloading, podcasting and Internet radio to consider as rivals.

Still, conventional analogue broadcasting seems to be doing just fine.

In an annual report released in March, the CRTC said that from 1999 to 2003, revenues for private, commercial radio rose by 7.8 per cent to almost $1.2 billion and net profits grew by 31 per cent.

John Hayes, president of Corus Radio, one of the country's largest radio broadcasters, says the medium is hardly on the ropes at the expense of new technologies, noting that last year industry revenues were up by between two and 2� per cent and that this year looks even better.

"The industry could be up in the seven, eight per cent area through the third quarter, which we think is really strong growth,'' Hayes says. "Out in the trenches, in the real world, audiences still use radio as much as they ever did.''

And he doesn't see either pay radio or DAB replacing AM and FM anytime soon and stresses that satellite radio cannot deliver local news, weather and sports.

Still, Corus is hedging its bets when it comes to new transmission technologies, supporting the Bitove-XM application with an option to buy company shares if they choose.

Hi

this post didn't seem to make it through last time - I'm looking for reasonably priced 10" reels (for 1/4" tape) - they can be full or empty - possibly old syndicated show you have hanging about - I'm on Long Island.

Thanks
bill

By Tim Wood
10 June 2005

Satellite radio uptake is booming thanks to portable receivers and aggressive content segmentation.

I think they're in for a tough time though as sales of MP3 players continue to soar. More important is the convergence of music players with cell phones which are becoming increasingly more useful as more software and functions are packed into them.

Podcasting is superior to satellite radio because it builds on the core idea that has made Apple's iPod and iMusic so successful - people prefer to compile their own programming and then consume it when it is convenient.

The ability to compile and arrange is improving all the time and eventually it will be relatively easy to establish a profile that collates MP3s and delivers them to your communications device.

If I was a satellite radio exec, I'd be spending a fortune making a cell phone that is capable of receiving my programming.

Rock Hard
5 June 2005

The following report is courtesy of Susan Whitall from AZcentral.com:

There's no hiding Alice Cooper. Even without discernible makeup, speaking in his workaday accent, the shock rocker can't help but emanate color and personality. That color spills over onto local airwaves as his classic rock radio show - broadcast "from a radioactive dump somewhere in Monument Valley" in Arizona - airs on KDKB-FM (93.3) in Phoenix, WCSX-FM in Detroit and 59 other U.S. markets.

"It's time that radio becomes less corporate," says Cooper, who grew up in northeast Phoenix and graduated from Cortez High school. "I try to format it the way (legendary Detroit station) WABX was, free-form radio."

Cooper takes the air at WCSX as celebrity disc jockeys crop up across the country, such as former SEX PISTOL Steve Jones on Indie 103 in Los Angeles, and STEVEN VAN ZANDT, BRUCE SPRINGSTEEN's guitarist and Sopranos actor who has a syndicated show. Stations are trying to compete with satellite radio's personality-rich programming, such as Howard Stern starting on Sirius in 2006, and even Martha Stewart inking a deal to appear on Sirius. The irony is that when radio stations tightened formats to limited music play lists and neutered air personalities, ratings dropped and helped spur the explosion of satellite radio and iPod downloads. Now, to bring listeners back, FM radio is forced to add personality and life to what listeners view as boring, repetitive fare.

"A lot of the guys running corporate radio, they only think as far as their black-and-white stats," Cooper says. "But according to my e-mails, 90 percent are saying thank you for not playing the same Aerosmith, thank you for not playing the same Van Halen. They're so tired of hearing these songs over and over."

Cooper agreed to do the show a year and a half ago only if he could choose "at least 50 percent" of the music himself. He digs back for rarer cuts from top groups but also throws in music that has been scarce at FM radio from the last decade or so.

The past year has been a time of plummeting revenues and uncertainty for mega-corporations that dominate radio. According to Bloomberg, shares of San Antonio-based Clear Channel, which owns about 1,200 stations, fell 17 percent in the past year. New York-based Viacom, the owner of Infinity Broadcasting, which owns 183 stations, slid 9.3 percent. Compare that with satellite radio, which offers listeners more than a hundred channels of diverse music. Sirius has more than 1.4 million subscribers while XM Satellite stands at about 3.2 million subscribers.

The news with younger listeners is more dire; they are the ones who are abandoning FM radio in droves.

Why Hire a staff and do radio right, thats expensive.  Cuts into my bottom
line and my paycheck.  I don't care what the market wants or needs.
Ill have the station sent to me on a few CD's and let the consultant make all
the programming decisions. Jack FM sounds good to me, but then I don't
know shit about music.

I can concentrate on Sales, get those agency accounts and my paycheck is
in the bank.

I was assisting an engineer friend in cleaning out an old radio station building and came across a Gates M-4990 frequency monitor.  I'm not sure of its date of manufacture or how long it has been out of service.  All but one of the tubes light up when power is applied.  I do not have any test equipment on hand to further verify its functionality.  The unit came from a station which operated on 930 khz.   I am working on getting some photos of the unit and will gladly share them with anyone who responds.  Ebay will be my next stop, but I would like some idea where to start with a minimum bid.

This expedition also yielded two McMartin TN-77CB FM SCA recievers.  These were used by the FM side of the same station and were placed in businesses who subscribed to the station's Muzak subcarrier. I'm guessing these are early 1960s vintage.  Again, I do not have the test equipment to further verify their functionality, but these items did not shoot sparks when I powered them up, so I guess that's a start. The FM subcarrier signal came from a station which operated on 93.3 mhz.

Any input on these items would be appreciated.  I tried a Google search on both items but got no responses.

Tape Warehouse has flanges for $4 or so a pair, brand new from Acrometals.
Be sure to ask for screw kits and hubs along with them.

Do you want to sell them on E-bay? Then set the minimum bid at $.01. If anyone wants it, they will set the price. if you set a high minimum or reserve you will probably not sell any of it. None of it is used by stations anymore, so the market will be collectors, not engineers.

Hello

I am an aircheck collector and a fan of old music radio and disk jockeys. As of now there are only two forums for us; the ReelRadio forum and a primarily Canadian forum.

If more old hands in the radio trade and other aircheck collectors show enough interest I propose the establishment of a Yahoo group dealing in airchecks and old music radio (eg. Top 40 radio from the Fifties to the Eighties).

Sadly the ReelRadio forum is being operated under strict rules that preclude advertising other aircheck collections or posting excerpts from other sources. And its operator, "Uncle Ricky", enforces these rules with an iron fist. I was blocked from the message board apparently for asking how to get legal permission for putting unscoped airchecks on an internet radio station. The final straw for me came when Uncle Ricky berated Anita Bonita, former air personality, for putting excerpts from a third source on the board. He pitched a tantrum and threatened to take down the message board.

We as aircheck collectors do not need to suffer for Uncle Ricky's desire to further his self-aggrandizement (he apparently wants nobody else to provide airchecks) at the expense of the overall preservation of old music radio.

Thank you

Ken

** CANADA.
Discussion in English on 6160, at 1318 May 19, presumably CKZU, but too little signal in too much noise. It so happens that there is currently a one-hour break in VOA Tinang usage of 6160 in English at 1300-1400, so if propagation and noise level permit, a good day time to check for CKZU
(Glenn Hauser, OK, DX LISTENING DIGEST)

** CANADA.
More Fun Facts About Canadian AMs --- I was curious about the similarities and differences of AM formats in Canada versus those in the US, so I worked up some stats.

As before, if multiple formats were listed (other than news/talk), I took the first one to be dominant and ignored the others.

Music is still a big factor on the Canadian AM scene, led by the AC and country formats. Talk and sports formats are significantly less popular than in the US.

Perhaps the most dramatic difference between the two countries is the almost total absence of religion/gospel as a full time format in Canada, though quite a few stations do carry some religious programming.

Here's the comparison:

| Format | Canada | USA | |
|---|---|---|---|
| AC | 24.3% | 4.6% | |
| Country | 23.4% | 12.7% | |
| Variety | 13.0% | 2.2% | (including "full service") |
| Oldies | 12.1% | 7.3% | |
| News/talk | 10.5% | 16.2% | |
| Ethnic | 4.6% | 2.0% | |
| Standards | 2.9% | 6.9% | |

| | | |
|---|---|---|
| Sports | 2.9% | 8.6% |
| Talk | 2.5% | 7.0% |
| News | 2.1% | 2.6% |
| Religion | 0.8% | 8.3% (17.1% with gospel included) |
| Other | 0.8% | 1.3% |

Some formats not found on Canadian AMs at all (and therefore not listed here): Spanish (except for CHHA-1610), gospel, urban, business news, pre-teen (Barry McLarnon VE3JF Ottawa, ON, NRC-AM via DXLD)

Re: ``Soon PEI might have zero ... 720 and 630 want to move to FM...``

Well, I'm going to miss CHTN-720. Before WOR went IBOC, I could get CHTN-720 all day long on a car radio. One summer day around 12 noon my wife and I were sitting in the car along the banks of the Cape Cod Canal listening to "Island Weather" from CHTN.

My wife was amazed that an AM signal could travel that far (465 miles) in broad daylight and be heard with near-local quality on a car radio! Goodbye Old Friend!

(Marc DeLorenzo, Cape Cod, MA, NRC-AM via DXLD)

Not so fast... unless Saul knows something I don't (and he might, if this info came from where I think it did), neither CHTN 720 nor CFCY 630 has actually filed an application to move to FM. Yet! (Scott Fybush, NRC-AM via DXLD)

I'm told there was a story in the Charlottetown Guardian newspaper about 630 and 720 being among applicants for a move to FM. Hasn't been formally gazetted by the CRTC, but there is a call for applications for this PEI city (Saul Chernos, ibid.)

** CANADA.
CHRISTIAN RADIO PLANNED FOR MONTREAL

By Joel Coppieters ChristianWeek
http://www.canadianchristianity.com/cgi-bin/na.cgi?nationalupdates/050519radio

OFFICIAL approval seems to be the last major hurdle for what could become Montreal's first French Christian radio station. Communications Media Evangelique, a local consortium of business, broadcast and ministry professionals, has already resolved many of the technical issues, found an appropriate site and used temporary frequencies to run trial broadcasts.

An impressive application package is currently being reviewed by the Canadian Radio-television and Telecommunications Commission (CRTC).

The station has reserved the call letters CKZW and is being considered for the powerful low frequency of 650.

"We see this as one of the next major thrusts forward in an ongoing chain reaction," said Andre Joly, president of the consortium and prime mover of the project. Joly has 40 years of broadcast experience as a reporter for CJRC in Ottawa and is infectiously enthusic about the project.

"We have seen it happen in many other areas of the Christian world," Joly explained. "Christian radio often brings an impetus -- a focal point -- and an energy that gets the ball rolling for other outreach projects [such as] print media, video, gospel music concerts . . . with increased collaboration between churches, all working together to effectively communicate the gospel to the masses."

Joly said he believes this project is long overdue for the Montreal area. Radio has been used in French Canada as an outreach tool for some time, but mostly in remote areas.

>From the very early radio efforts in northwestern Quebec by Ron Heron and Quebecois evangelist Gaston Jolin with L'Heure de la Bonne Nouvelle to dozens of other local churches and groups, the efforts were focused in small population centers and dependent on commercial radio stations.

Even evangelist Fernand Saint-Louis' first attempts in 1963 to bring the gospel to Montreal radio waves with his program La Foi Vivifiante involved purchasing airtime on commercial stations. And even now scheduling remains at the mercy of available time and "objectionable" content can lead to listener complaints that result in being bumped to middle of the night or removed from the air altogether.

Though it is secularism rather than opposing religious viewpoints that motivates opposition now, similar complaints have already limited Joly's previous efforts on commercial stations. This makes a dedicated Christian station vital to maintaining any control in getting the message out.

Connie Billiter and her husband Terry have been managing a Christian radio station out of Champlain, New York for more than 18 years. "From the very beginning at WCHP," she says, "we had a heart for French Canadians and we wanted to use our proximity to the Montreal area as a tool to encourage churches there." Montreal area churches and ministries have little trouble filling more than two hours of each broadcast day with French teaching and outreach on WCHP.

Since WCHP is essentially talk radio and CKZW's proposed focus is gospel music as an outreach tool and drawing card, the two ministries don't compete and in fact regularly compare notes and share resources, and even a key broadcast engineer.

Joly says the the CRTC approval process could be done within a month or two, but might well stretch out to over a year if public consultations take place. (via Artie Bigley, DXLD)

Thanks - when I contacted them - the price was over $10 a pair with the
screw kits - which is probably fair - but I need about 50 of them. So I
thought if I could give somebody in the group $5 each for used ones
they might have collecting dust - everybody wins.

bill

KSL 1160 Salt Lake City has dropped a decades-old tradition on account of IBOC.  They just threw the switch a couple of weeks ago.

The ttradition was that KSL broadcast the 'Nauvoo Bell' on Temple Square, at the top of every hour.  The bell was once in the original Nauvoo LDS (Mormon) Temple but was removed before that building was destroyed by an arsonist then a possible F5 tornado a year after that. The Mormon Pioneers carried it across the plains with them.

They mounted it eventually in its present location, and it has rung every hour ever since save for occasional times due to maintenance or other circumstances.  It will still ring, but because of IBOC it will not be heard live on the radio any more.  KSL has aired the ringing of the bell for almost all of our lifetimes until last week.

The technical explanation given was that there is now a seven-second delay between the analog and digital signals being broadcast.  People actually have been known to, and still set their watches to the Nauvoo

Bell's ringing on the radio.

This was discovered when a radio fan saw some men on a snorklift
removing some electronic equipment from the tower.  An email to the
chief engineer of KSL confirmed it.

If memory serves me right  it was KUTE that first inhabited flint peak in Glendale  in the 1950s  talk about a signal full of noise, even the aircond when mic was live. They were one of the first backgroundmusic stations that used 18khz trigger tone to mute receivers during announcements. I think KRKD/Musicast was a pioneer in hi freg muting .

Ken,

First of all, Uncle Ricky provides one of the greatest resources out there for people who want to listen to old Top 40 airchecks. The day you run your own website, pay for your own website and administer your own website -- plus polish all the audio and write most of the text -- then you can complain about "suffering" because of "his self-aggrandizement."

Second, when you say "he apparently wants nobody else to provide airchecks," you've obviously not spent any time on the website. If you pay attention, virtually EVERY audio recording was provided by someone other than Ricky. In fact, nearly every well-known collector has contributed audio to the site.

Third, do you know all the different elements that go into having to get permissions and rights to stream these audio presentations on the Internet? After you get through jumping through all the hoops of setting up an account with SoundExchange to pay royalties, not to mention setting up the streaming server, let me know how much you enjoyed the experience.

ReelRadio is very genre specific -- Top 40 radio. I wanted to share my collection of 30+ years of airchecks, documents and photographs, so I started my own website and jumped through those hoops. Oh, and if you tried to post "advertising other aircheck collections or posting excerpts from other sources" on my site, I'd do the same thing Ricky did.

> Sadly the ReelRadio forum is being operated under strict rules...

Again, spend a minute or two on ReelRadio to learn what it's about. It's not a trading post. It's not a place that sells airchecks. And don't forget that it's his website, and he can make the rules, the same way you can when you set up your own website.

By the way, rather than starting another Yahoo aircheck group, why don't you join one that's already there? I count at least five general interest aircheck collecting groups on Yahoo right now, plus another dozen with more specific interests. (Of course, they may have rules that you disagree with.)

One of the best groups out there is Radio-Info.com's Aircheck Collector board (http://www.radio-info.com/mods/posts?Board=airchecks), which is regularly visited by some of the better-known collectors. Give it a shot; it's moderated, but the rules are flexible enough that you won't have the problem you encountered at ReelRadio.

D.J.

Correction:
It was NOT, repeat NOT Anita Bonita but another Anita who was
castigated by Uncle Ricky.

Yet I still stand by my basic idea of a Yahoo group.

KAT

"kturnerga" <kturnerga66@yahoo.com> writes:

> We as aircheck collectors do not need to suffer for Uncle Ricky's desire to further his self-aggrandizement (he apparently wants nobody else to provide airchecks) at the expense of the overall preservation of old music radio.

Assuming you have related the entire facts of the matter, the "final straw" case was when he got upset when someone used his web site to publish materials for which no authorizing legal paperwork was given.  This was presumably a clear violation of the policy of his web site, we well as a violation of the terms of service with his Internet provider (who could take down his site off the net).  Perhaps Uncle Ricky is justifiably concerned (or even terrified) that he will be both shut down and on the receiving end of very serious legal action from the owners of the copyrighted materials that you propose to reproduce.

> I propose the establishment of a Yahoo group dealing in airchecks and old music radio (eg. Top 40 radio from the Fifties to the Eighties).

I have no idea whether Yahoo will ultimately allow you to host these kinds of materials, but I suspect that they will have terms and conditions forbidding it.

Anyway, I don't see why you shouldn't feel free to bring up your own site, solicit contributed materials, and make up your own rules.  It should be possible to accomplish legally.
Maybe your site will be better than Uncle Ricky's.
Post the URL here when it's available.

As I am sure you realize, all on-air material is copyrighted by the broadcast station (its owners/successors), as typically indicated in the station sign-on/off announcement.
Individual elements of the broadcast compilation work, such as the commercials and jingles are in turn copyrighted by agencies and clients.  The DJ banter is probably owned by the station, since it was an employer/employee work for hire, unless it was licensed as a special production of the DJ or a syndication.
Music played on the radio in the 1950s is still under copyright, and (since I'm listening to an oldies FM station at this moment) I am fairly certain that it's subject to licensing from ASCAP and BMI, with additional enforcement by organizations such as the RIAA (which has been very aggressive in Internet-based copyright violations).

One assumes that you have good lawyers and deep pockets.
So, do let us know how that goes.

Well, actually, it does matter how many people listen, at least to XM. XM surveys its listeners periodically and drops channels to free up bandwidth based, in large part, on the results of those popularity polls. When Special X (a channel devoted to musical weirdness) was dropped, its failure to register as more than a blip on the customer surveys was cited in Lee Abrams' standard response to listener e-mails. What replaced Special X? The Blend, a "greatest hits of the 80s, 90s and today"-type station.

Howard

```

"Stern, for example, was regularly fined for indecency by the newly aggressive Republican-led Federal Communications Commission"

Stern was not fined, but his employer WAS fined, but in past administrations, the radio biz regarded the fines as a cost of doing business.

This is not unlike a guy who likes to drive his Lamborghini on the highway at 100 mph or through residential neighborhoods at 50. He does not view the tickets as societal sanctions but part of the cost of owning the car. Ditto his DUIs if he has a habit of imbibing.

". Radio stars Opie and Anthony - known for outrageous stunts such as
recording sex in churches - couldn't keep paying the government fines their
smut brought on
them."

The O&A church stunt probably was going to end up with license action, and
not nominal (to the broadcaster) fines. Which is why they were immediately
kicked out of their gigs. The president of the beer company that
sponsored the stunt also found his company in a horrendous public relations
situation.

Satellite radio is grand. It frees the publicly owned airwaves from this
stuff. Everyone has recognized that there is still a market for this
trash radio. So, they can go out there and charge for it, and if someone
pays for it, OK with me. Just don't make me PAY for it.

Thanks for the "if", Kim.  I didn't say this and don't believe it. Ownership matters.  But business model matters more, including the ability to design and subsidize proprietary receivers.  The delivery system matters more because it permits the aggregation of niche tastes.  The absence of content regulation, particularly television-style coerced, non-marketplace, nabcaster carriage is hugely important.  This enables satellite radio to build a secular, pro-liberty constituency that in time will let it win the battle against terrestrial for full First Amendment rights.

But ownership is in there somewhere.   Regs chose duopoly rather than monopoly for satellite radio, and chose well.

Never forget that satellite radio is *hometown* radio.  It brings the best of the culture, seven jazz channels for example, to every community in America. Including the "flyover" communities whose limited commercial potential makes them irrelevant to terrestrial media elites.

EchoStar and DirecTV, the two competing satellite broadcasters in the United States, have both announced increases in their number of subscribers.

EchoStar added around 325,000 new subscribers to its Dish Network in the first quarter of the 2005, bringing its total number of satellite customers to 11.23 million. The company reported total revenue of just over $2 billion, which represents a 28 per cent increase on the same period the previous year.

DirecTV added over half a million subscribers in the United States in the same period, an increase of over 20 per cent on the previous year. At the end of March, DirecTV had a total of 14.45 million customers, a 14 per cent increase on a year previously.

Quarterly revenues stood at $2.8 billion, up 35 per cent on the previous year. The DirecTV group as a whole reported quarterly revenues of $3.15 billion, narrowing operating losses to $41 million.

Chase Carey, president and chief executive of DirecTV, said: "We will roll out our new interactive digital video recorder in the summer, followed shortly thereafter by the launch of a suite of enhanced new services for our exclusive NFL Sunday Ticket package.

"We believe that the enhancements we are making to our service will bring us closer to our goal of making DirecTV the best television experience in the world."

You have a very odd definition of hometown.

I suppose if you're listening to XM and are from San Antonio, Texas, it's "hometown" radio because that's where Clear Channel's corporate headquarters are. :P Or if you're in NYC and listening to Sirius.

At any rate, "beamed down from a bird in orbit thousands of miles above Earth" doesn't qualify as hometown radio as far as I'm concerned.

And you forget who owns the satellite companies... "terrestrial media elites." At least here in the US. (OK, that's true of XM for sure... not sure about Sirius's corporate pedigree, but the people in charge are from large communications companies...)

Correction: Clear Channel no longer owns an attributable stake in XM.
They never owned as much as 25% in any case.  (XM's headquarters are
in Washington, BTW.)  The biggest owner of XM is Rupert Murdoch's
DIRECTV Group.

Well not quite correct.

I have not used my receiver(DAR-WS2000) for a while since I can only
point at the satellite from my garden and what with the English weather
!!

I tried yesterday and most of the stations I could pick up are now
locked. Picked up a Worldspace station asking if I wanted to subscribe
?

Fuck-Off I only listen to RIFF ! I like jazz.

Get people interested and then charge.

I don't suppose there are any hack-codes ?

Anybody want to buy a barely used DAR-WS2000 ?

KATL changed calls to KYOK in 1954, and to KMIC in 1999.  I haven't
checked Texas calls since last year to see if there has been any
changes since.  Hope this helps!

Steve,

Clear now has less than 1% of XM; they never were more than 5% to 6% before the dilution of equity due to the constant issuance of more stock to pay for the huge losses. No other media company has any position in XM... the biggest players are car manufacturers and mutual funds.

Thanks; ok, details are slightly off, but the concept is still the same.
Perhaps even more so in Murdoch's case. :)

It wouldn't bother me in the slightest if DirecTV or Clear owned a bunch of XM, but they don't:

DirecTV Sells XM Stake -- 3/26/2004 10:02 AM EST
....investment was surely a profitable one for DirecTV,...XM shares posted a staggering 1,000% gain last year...
http://www.thestreet.com/_tsclsii/markets/marketfeatures/10150897.html

This angle of attack appears to be going noplace.  So I expect we'll shortly be reminded that Karmazin runs Sirius and that both providers are teamed with good terrestrial radio people.

It's the absence of a coinbox that has turned terrestrial into a wasteland, not "corporate greed."

Jerome

What is up with B.E.???

Anyone else having trouble with their AudioVault systems and getting little or no help from B.E. Customer Service?  If you've done anything that worked, let me know, please.

I've had this AudioVault system since December and after two visits by a B.E. tech(who left without it working), uncountable hours on the phone, and returning the unit for repair, I STILL DON'T HAVE A WORKING SYSTEM.  The GM even wrote a letter to the BE President John Pedlow who hasn't bothered to answer or acknowledge our problem.  Nothing has worked, but more importantly, the system has never worked.

Other than not buying anything from B.E. in the future, ever again, anyone have any idea's?  Any help would be appreciated.

Even the Hughes ownership, which started at over 20%, which transferred to DirecTV, was sold a year ago.

DirecTV Sells XM Stake

By TSC Staff
3/26/2004 10:02 AM EST

Shares of XM Satellite Radio (XMSR:Nasdaq - news - research) slipped Friday after longtime backer DirecTV (DTV:NYSE - news - research) sold its stake.

DirecTV raised $230 million Friday by selling the public 9 million shares in the fast-growing Washington, D.C., satellite radio broadcaster, XM said in a Friday morning press release. DirecTV, which until this year was a General Motors (GM:NYSE - news - research) unit called Hughes Electronics, was an early investor in XM and remained its largest shareholder through January, according to Yahoo! Finance.

The investment was surely a profitable one for DirecTV, which recently came under the control of Rupert Murdoch's News Corp. (NWS:NYSE - news - research) . After all, XM shares posted a staggering 1,000% gain last year as investors bought into its promise of early leadership in a fast-growing tech niche. At the end of 2002, before the XM rally began in earnest, GM and its affiliates held nearly 20% of the company. .

Look, folks, perhaps I shouldn't have named names. Especially since I don't follow the satellite radio business as closely as I could. Especially, especially since there are people who are much more familiar with the players involved than I am. :)

However, if y'all really want to argue that satellite radio is "hometown" radio, I'll argue until my dying day that it's not. It is the diametric OPPOSITE of hometown radio. "Hometown" implies a broadcast outlet directing its programming at an audience in the same geographical area.

Jerome, THAT is the point I was trying to make (and apparently failed to make).

For us ("us" including you, if I recall correctly) to have complained for years about industry consolidation and the homogenization of radio outlets across the USA, and then for you to tout satellite as "hometown" programming, is beyond my comprehension, and I'm shocked to hear such a thing from any of the regulars, ESPECIALLY you.

Maybe I'm just confused. Perhaps you could clarify your statement.

So, are you saying that anyone who wants to be available by satellite, they should launch their own bird and build their own earth stations and control systems?  WSM in Nashville is on Sirius, as well as a internet stream.  Are you telling me they are controlling WSM's programming?  That WSM isn't a "Local" station for that area of Tennessee?  I don't have a Sirius radio, but I have listened to WSM on it at a retail store.  There is plenty of room for more channels, but why bother if the local station doesn't play what you want to hear? There are several local "Country music" stations that truly stink.  Some of their staff have told me they would rather be playing heavy metal, and its reflected in their on air personalities.

A local low [power AM radio station does a one hour show about veterans.  Its the only thing I listen to on a regular basis.

The one time I needed to listen to them for more than a few minutes was during the hurricanes that hit Ocala last year.  Guess what?  A couple studios had backup power, but their transmitter didn't.  Other local stations had power for the transmitter, but not the studio, so I had to try to listen to Tampa, Jacksonville or Orlando which had no local news.  Local radio around here is already dead, but no one has bothered to tell them.

```

Steve, I'm sure you've confused me with another poster.  I've never pined for a different and supposedly golden era of radio with council meetings, lost puppies and local artists.  These were Hendricks and gaffo's themes, not mine. Consolidation was a theme of others.   Payola was a theme of others.  Live and local, a fetish of others.  Automated and local is cheaper and works as well on radio as it does on the web.

My issues are, typically

1) The sheer inefficiency of paying for content through undifferentiated commercial sponsorship.  Not that long ago, the only way for a listener to pay for radio was to be harangued.
2) NAB's attempts to brake technical progress and its chokehold on the bandwidth and the fundamental liberties of its competitors

3) If excessive competition were a problem (the Bakersfield principle) the license prices wouldn't be going up

4) If even more competition eventually forces profitability and license prices down, terrestrial radio would survive nonetheless, and might even find it necessary to invest in local content to differentiate and compete.

Am I a little nostalgic for Wm. B Williams, Shep, Carlton Fredericks, Brad Crandall, Bill Watson, BAI and Monitor? Of course. What thinking listener doesn't have a set of names like these, exemplifying calm, worldliness, spontaneity and respect. But they were rarities even then, they can't be regulated back into existence, and I probably wouldn't have time for them today. The golden era of radio is the one we're in, with satellite, internet and time-shifting through Winamp, CD burning and flash memory. As dismal as AM and FM became, the marketplace found other ways to meet listener demand. Good radio people may have landed out on their ear, but we listeners definitely got our portion.

What makes Satellite radio hometown? Well, when NAB does its annual brag about how many artists and songs terrestrial radio introduced, its tally includes about 12,000 signals that any given listener cannot receive. It is satellite that brings these niche formats to every community in the contiguous states. A far richer variety in East Jesus, USA than was available in the biggest markets a few years ago. Each listener is a hometown subscriber/sponsor; satellite has a name on file, a feedback and accountability mechanism in place, and a keen awareness of the economic value that listener represents.

XM is developing digital fountain technology and will be as locally differentiated as regulators permit it to be. No longer will the information you need be tied to the music or commercials you despise; it'll be stored in the background and available at your convenience. Including, perhaps, a traffic report from terrestrial, and real-time room availabilities from the local motels. Onscreen or via synthesized voice. NAB will have a fit.

I'll admit there's a disigenuous element to the "hometown" crack, though I stand by it. I'm actually on very friendly terms with most of the broadcasters in this community. Jim and Jim, the former owners of one group. Cindy and Jen, the voice talent. George, the new manager. Jan, owner of the other group. Doug and Tracy on the air. Known 'em and liked 'em for years. But I don't listen. Home is where the eardrums are.

Jerome

11 May 2005

By Gary Strauss, USA Today

As more consumers turn a deaf ear to traditional radio, stations increasingly are switching formats.

The Internet, iPods, computer games, podcasting, commercial-free satellite radio and staid programming have combined to slice average weekly listening time 9% since 1998, prompting many "terrestrial" commercial stations to jettison even relatively strong formats, such as rock, in several big markets.

Country, talk, adult contemporary and religious formats still dominate. But with satellite radio growth exploding, format flips are accelerating as stations "become more earnest addressing the erosion in listenership," says Sean Ross of Edison Media Research. Hot concepts:

.Jack. Aka Bob, Alice and other first-name monikers, the format focuses on '70s, '80s and '90s hits, sprinkled with current tunes. Target audience: twenty-somethings to baby boomers. A hit in Canada since 2002, Jack could be in 100 U.S. markets this year.

Jack is often backed by "throw away your iPod" marketing hype because it employs playlists of 1,200 or more songs - triple most oldies-style music stations and a bit closer to iPod capacity. "Jack's a reaction to stations that are tightly formatted and predictable," Inside Radio editor Tom Taylor says.

Baltimore station WSQR jettisoned its 17-year-old oldies format for Jack on May 4. "With Jack, people don't know what to expect, and we hope that's what they'll gravitate to," says programming director Dave LaBrozzi.

.Hurban. Spanish-language formats are hot. Hurban, a fusion of Spanish hip-hop and English-language R&B, targeting young second- and third-generation Hispanics, is even hotter. Strong in Southern markets, Hurban "is a concept coming up bigger every week," Billboard Radio Monitor editor Paul Heine says.

.Progressive talk. Talk radio has long been dominated by syndicated conservatives such as Rush Limbaugh. But liberal formats, led by Air America, have sprung up in 75 markets. "It appeals to those left out of the current conversation in talk radio," Heine says.

Some formats, such as contemporary Christian music, are bolstering ratings at 15 Salem Communications stations, says chief operating officer Joe D. Davis. Other stations are simply tweaking playlists. New York's WXRK-FM (K-Rock), home to Howard Stern until his 2006 ascent to satellite radio, modified its non-talk rock format to classic rock to keep core 25-to-54-year-olds, says industry consultant Robert Unmacht.

Operators also are avoiding listener static by slashing commercials, following Clear Channel. The USA's No. 1 operator with 1,200 stations has initiated a "Less Is More" campaign. "We had some stations with 15 to 16 minutes of ads an hour," Clear Channel programming executive Doc Wynter says. "Now, it's no more than 10 minutes."

About 80% of the USA's 13,838 terrestrial radio stations are commercial stations.

Favorite formats:
News/talk: 2,179 stations
Country: 2,066 stations
Religious: 2,014 stations
Adult contemporary: 1,556 stations
Adult standards: 1,196 stations
Oldies: 1,060 stations
Rock: 869 stations

Check this out. Bought a new Broadcast Warehouse 150w fm 3-meter RF Amp. Payed $310 for it. The piece-o-crap came busted, then I get this phone call from the FCC. Seems that I have made some purchase over-seas, regarding a Broadcast-Warehouse FM band Amp. I get paperwork from BW to send to the FCC!

Those MF's at Broadcast Warehouse ratted-me-out to the Feds! Needless to say, I dont need to get black-listed over here. Time to pull up shop. So Im selling the BW brown-amp for scaps on Ebay.

Moral of the story, carefull who you do business with!

I can see a couple of problems in sat radio that will keep most listeners tuned in to local radio.

1. In larger markets sat cannot provide up to the minute traffic

2. In smaller markets like where I work (Ely, Nevada) local weather and or EAS information.

Unless they can figure out a way to let listeners know what traffic is like across the floating bridges in Seattle or what local goverment is doing here in Ely to prepare for flooding or severe thunderstorms radio will alwys have an audience.

I have a new band, with all new musicians. We are playing some of the same songs, that I wrote, from my last band. Do any of the musicians in my previous project(s) have any legal claim over the performance or sale of these songs as recorded by my new band? I ask because my ex-bass player sent me this email:

"hey, i heard you guys playing a NEW tune,while smoking outside our studio last night. not bad at all, only one slight problem though..., you may have copyrights to the songs, but those are my bass lines and i have already spoken to my attorney,and he suggested that i try this email first,to nicely ask you not to play anymore of my bass lines. under the law,no matter if you own the copyrights to the songs, those are my bass lines.i don't have to have them protected by copyrights, just simply have a recording with me as the bass player on the cd.if you for some reason don't agree... maybe you should look it up... it's the law... and i don't appreciate being ripped off that way...people around town are" listening " for me..this doesn't have to get ugly...just change the bass lines ....no problemo..."

Ironic because he always complained that I told him what to play and wrote his basslines for him... <sigh>

There was a LP in the 50s ``Speed the Parting Guest'' of a percussionist
in a china shop that might do well on a modern playlist.

Cooperstown.Net wrote:

[ a lot of good stuff... snipped... ]

> What makes Satellite radio hometown? Well, when NAB does its annual brag about how many artists and songs terrestrial radio introduced, its tally includes about 12,000 signals that any given listener cannot receive. It is satellite that brings these niche formats to every community in the contiguous states.

Which, by definition, makes it NOT HOMETOWN. *EVERY COMMUNITY* in the lower 48, right? My original point was that if I'm in Apple Valley, there are a bunch of LOCAL radio stations; a half-dozen owned and operated by Clear Channel, and another (about) ten or so owned by independents. Infinity is up here, but their only outlet simulcasts a country station down the hill, so they don't count, nor does the smaller broadcaster using 92.7 to simulcast their signal on 92.7 out of Ventura County, a few hours away.

Someone programming for a nationwide audience is NOT programming specifically for my neck of the woods and thus is NOT providing hometown programming.

> XM is developing digital fountain technology and will be as locally differentiated as regulators permit it to be.

Very cool. But they're NOT hometown. "hometown" generally means "originating locally" as well as "serving the local market."

I love listening to Alice Cooper, but he's not local... he's syndicated out of Phoenix (IIRC). Same can be said for Bob and Tom, who are on the station that Cooper is on, in the mornings. I love Bob and Tom too. But they're not providing hometown content.

I can tune to 92.7 and hear about traffic coming from Los Angeles up through the Valley on Interstate 405 in the afternoon, if I want to, but I'd rather tune to one of the CC stations and hear local traffic reports...

This might be similar to the Parliament/Funkadelic matter in the early 70s, although it is different in other ways.

An interesting aside, I know of someone who did a song entirely of snippets of songs that used the same four-chord progression.  An example of where this chord progression was found would be Five for Fighting's 'Superman'.  All the songs used were hits, and never more than the relevant phrases sung over the progressions. and never more than one phrase was used from any song.  About 20-30 songs were used, the song came in at about five minutes .  Was a huge hit at the no-booze club where I heard it.  The performer did it live.

Hey Folks,
Kinda down at the moment, our college radio station got busted by the FCC. Here a list of the stuff that was hauled off:

NRG PLL-PRO 3 20W TRANSMITTER
NRG 220 WATT RF LINEAR AMPLIFIER
NRG PRO III STEREO CODER
NRG PRO III STEREO LIMITER COMPRESSOR
DAIWA CN-101L SWR+POWER METER
COMET CFM-95SL 5/8 WAVE ANTENNA
50 FEET OF LMR 400 COAX
KENWOOD R-1000 SW RECEIVER (my fathers old short-wave radio?)

The really weird part is that we WERE NOT transmitting at the time of the raid. One of the agents tolds us that they traced us through a purchase order from Broadcast-Warehouse! It's true that we bought a 150w amp from broadcastwarehouse.com a few weeks ago. How did the FCC know about that?

Anyways, we will rebuild the station and continue to fight the globle interests of the MEGA-MACHINE.

DEATH TO THE MEGA-MACHINE!

Has anyone tried to receive the US satcaster Sirius in the UK?  At
least one of their sats is above the UK horizon at all times, although
the sat's antenna beam will try to avoid "wasting power" in the
direction of Europe.  It would surely require a high-gain receiving
beam antenna.  One would, of course have to pay for a subscription so
the experiment would best be done with equipment borrowed from the
States. That would give one the choice of over 60 channels of
commercial-free music.

XM's sats aren't above the horizon in the UK and probably have much
tighter antenna patterns.

"Josh" <googlemyass@undertone.com> writes:

> songs, that I wrote, from my last band.

> my ex-bass player sent me this email:

>
> "hey, [...] those are my bass lines and i have already
>  spoken to my attorney

> no matter if you own the copyrights to the songs, those
> are my bass lines.i don't have to have them protected by copyrights,
> just simply have a recording with me as the bass player on the cd.

I would ask him to more clearly state his claim.
>From his email, I can't tell if he thinks:

1. You alone did not write the song: it is a joint work of which he is also the author.

2. He is the sole author of a song, comprised entirely of those bass lines, to which you have no right. He objects to your creating and performing a new derivative work by playing them along with your song,

3. He owns the bass lines merely because he was the first person to perform them, even though you composed them and told him to play them for you.

He doesn't have any right to the music merely from having played it. So he must be trying to say that you are fraudulently claiming the copyright, or are infringing on his copyrighted song. Simply put: he is claiming that he is the author, not you.

You may wind up in court, having to prove that you are the sole author of the bass lines. The question will be who first fixed the music into tangible form. If you wrote them down first (on a scrap of paper or anything), and then showed them to him, you are almost certainly the author. On the other hand, if you told him verbally what to play, and then they were played by him into a tape recorder before being written down, it could be a little more complicated. One question will be who was agreed to be the owner of the recording. One question would be about your exact relationship to him at the time. Another question will be about the circumstances of when the song was first set onto paper (such as who was there, how did your name get on it, when did he become aware of this, etc.)

If he has already consulted with a lawyer who has advised him on this matter, it seems very strange that he didn't get the lawyer to write this first complaint letter for him. It is also incredible that a lawyer would tell him that your copyright on the music in question is not relevent. It is the only issue.

My guess is that he has not really presented the facts to any lawyer who has actually given him advice. Maybe he ran some version of his story by some lawyer (who may or may not actually know anything about the entertainment industry or copyright law) on an informal basis, and who gave him no advice to rely upon. By suggesting that this is not about copyright, he is certainly mischaracterizing what any lawyer

would say, to such a degree that it's hard to believe him at all.
I'm no lawyer, but I can tell you that he has no right to the song
merely because he performed it on a CD. Performance rights (for you
or him or anyone to play the wong) belong entirely to the (copyright)
owner of the song.

The customs folk may be telling them, as all stuff coming into the country
```

gets customs declarations. Don't worry about having lost a few bucks worth of equipment. The second time there will probably be nice healthy fines and possible court action that people involved will be invited to participate in.

Save up 5 or 6 figures for your lawyer costs. You'll need them.

Thanks, Steve. I've never known a radio signal to respect a political boundary. Each signal serves a region of a certain size. Satellite serves a larger community, the contiguous states, and a smaller, as its receivers evolve into automated control rooms and as the providers refine their feedback mechanisms.

Under the scarcity model which terrestrial is fighting vainly to protect, listeners yield their personal tastes and interests to those of the cohort desirable to advertisers, wherever they live or travel. And they further yield a major segment of their attention to ads, funding credits, fund drives and thinly veiled PR.

Those in the traditionalist camp who find the homogeneity of terrestrial radio disappointing are accepting as a given a scarcity that has long been shattered.  They are right to consider localism preferable to "same thing everywhere" formatted programming; but "everything anywhere" is the ideal, and is more closely approached by satellite.  And is in fact achieved by satellite+internet.

Jerome

That stuff isn't type-accepted.  You should not be using it on the air.

The same way that if you bought an amp from HRO and didn't submit the
license along with it.

>interests of the MEGA-MACHINE.
>
>DEATH TO THE MEGA-MACHINE!

I'm not sure what the MEGA-MACHINE is, but if you're running non-type-accepted
gear that isn't custom-made, you're going to get a citation.  It's good to
see that FCC at least enforcing _some_ technical standards these days, since
it's been a long time since they've paid much attention.  Bring back annual
proof of performance measurements and hourly logs, that's what I'd suggest...

I don't want to start a flame war, but you're making it very difficult to resist telling you what I really think about your complaints.

Right or wrong, the broadcast regulations *are* the official rules, and since you broke them and you obviously *knew* you were breaking them (you are, by your own admission, a pirate), you really don't have any justification to complain about the FCC seizing your equipment.

I understand and respect the fact that you may not agree with the current rules. That's fine with me. And I don't think anyone here would claim that you don't have a right to your opinion. But when you break the rules, even in the name of civil disobedience, you risk getting punished, and that's obviously what happened.

I'm going to make this point one more time, and then stop contributing to this thread, because I doubt you're understanding my point and I don't want to get frustrated.

What you say is true:

> Each signal serves a region of a certain size.  Satellite serves a
> larger community, the contiguous states, and a smaller, as its receivers evolve
> into automated control rooms and as the providers refine their feedback
> mechanisms.

...but call me a purist, I just don't believe that such broadcasts can be considered local unless you happen to be listening to a satellite feed of a station originating in your general area.

You are stretching the definition of "hometown" radio past its breaking point.
I think we'll just have to agree to disagree.

> Under the scarcity model which terrestrial is fighting vainly to protect,
> listeners yield their personal tastes and interests to those of the cohort
> desirable to advertisers, wherever they live or travel.  And they further yield
> a major segment of their attention to ads, funding credits, fund drives and
> thinly veiled PR.

This is the same with many satellite formats as it is for terrestrial formats.

> Those in the traditionalist camp who find the homogeneity of terrestrial
> radio disappointing are accepting as a given a scarcity that has long been
> shattered.  They are right to consider localism preferable to "same thing
> everywhere" formatted programming; but "everything anywhere" is the ideal, and

> satellite+internet.

So you actually agree with me that satellite programming isn't local? Because that's been my whole point all along!

```

I use a Sirius XTR1 receiver in the XACT boombox and car adapter. The XTR1 (shown here http://tinyurl.com/87cvu ) gets very hot to the touch. Is this heat dissipation normal? It has a lot of vent holes so it appears it's designed that way.

Does your Sirius XTR1 radio get very warm ? If so, any idea why ? Does the LNA or other circuits cause that ?

Thanks, Greg

Is there a application to delay a sound stream for say
up to 1 hour.   24/7.  We do not believe a compression,
time delay programme would  suit this application.

We envisage a dedicated computer to accept a stream and
delay it by up to 1 hour before releasing it through
the sound card.

Does anyone know of such a application?

I have heard such methods have been or are used to
overcome nation-wide broadcasting when dealing with
time zones.

Any suggestions or help would be most appreciated.

Rob

http://www.cashflowbusiness.net/siri_orbit.htm

Note that three times a day both active Sirius sats are at the crossover point of the figure-8. There won't be much of any spatial diversity for an hour or two around this these times, ie: the two acitve sats won't be much better than just one.

The two-line orbital elements can be obtained from:
http://celestrak.com/NORAD/elements/other-comm.txt
You can then use a program like NOVA and have your own display of the orbits with a display of time and direction to each satellite. (XM-3 is the first replacement sat for XM).

I'm not sure what the model is, but a friend of mine has the Kenwood Plug-n-Play, and it gets disturbingly warm. I think this is one of the reasons why satellite radio isn't wholly portable yet, because the chips used consume a lot of power (and release a lot of it as heat). Next generation chipsets should be a lot better.

How hot is "hot"? Don't forget that some chips not only need a heatsink, they need a fan, too. A lot of the chips I've worked with got warm to the touch, and some items needed multiple fans to pull air through the radio case.

I'm highly suspicious of that graphic, RJ.  Something about the way that tiny little Sun peels around Earth.  Do we know the graphic's origin?

For something straight from Sirius, try

http://www.siriusradio.com/servlet/ContentServer?pagename=Sirius/CachedPage&c=DownloadAsset&cid=1038414951381

If that doesn't work, Sirius.com -- About Us -- Image Library -- Miscellaneous -- Control Room

...then download and unzip the big image to see what's really going on to create that Figure 8 effect.  Three technicians in the control room; the large view of the satellites in space and the four views of the ground track.

I see three orbits at right angles to one another.  The ground tracking matches in both graphics, but is it possible that the actual bird heading south over MN is *not* the one that was heading north immediately prior?  And that, while the satellites' paths cross, they don't necessarily cross over Central USA?

Jerome

Here is a letter i just wrote to NYC's kRock:

Hi,

For years ever since I started listening to music I've listened to KRock, heck I've gown up on KRock. Now you guys have fucked up- your just another 9.55 or z100. For years I've fought to make sure my Discman or mp3 play had a built FM tuner, because listening to you let me know about new band, albums, news... Now I just looked around for a new MP3 player and decided to screw the FM tuner, you guys are shit anyway. Along with that I just tested out my friend's XM radio other day and between that, DHA (I don't like them either, but their better than you guys) I'll be able to stay on the up and up on whats going out.

Wtvr you guys are sell outs, nice knowing you

Peace out

Dan Irwin

P.S

The time in January where one of your DJs mocked the Tsunami and then

mocked me when I called in screaming at him didn't help my view of
you guys either.

Yep, here:

http://www.radiopower.org/talk=ADradio/

Its worth a listen if you find Democratic wingnuts praising
the eternal goodness of Hillary Clinton a bit of a hoot.

And on the other side, there is WMAL here:
http://www.wmal.com/

Home of Hannity, Rush and the usual Republican loons.

Where they too speak often of Hillary Clinton ;-)

It beats the shit out of Australian political commentary, espeically if you appreciate the sensationalism of it all.

I'm sure it was created by the NOVA program from the official NORAD
orbital elements.
That is the subsatellite point of the sun - not the sun itself.

You will note that the images on the four lower screens show orbits
which are identical to the one in the graphic I linked to.

> over MN is *not* the one that was heading north immediately prior?

You agree then about the ground tracks. Satellites can't change direction instantly without a lot of energy (propellant) being expended.  Thus each one continues to rat-race around it own figure-8 orbit.The north-heading sat has to go around the upper part of the loop before it can head south.  In the case of Sirius the three orbits are 8 hours apart which accounts for the upper picture, I suppose. You'll note that each sat takes exactly 24 hours to get around its orbit, otherwise everything would change from day to day, which it doesn't.

> And that, while the satellites' paths cross, they don't necessarily
cross over Central
> USA?

Their 4 images show they do.  Each sat spends 1/3-rd of its time north of the crossover and 2/3-rds of its time to the south.   My guess is that if the orbits weren't "exactly" 8 hours apart two sats wouldn't be at the crossover at the same time.

I have faith in the accuracy of NORAD and NOVA, especially when they seem to agree with Sirius..

The Sirius program ground stations must actively track the sats. Unless each sat has its own ground station it would be Really Fun when the feed was switched from the western sat to the eastern sat three times a day. The FCC would never permit a nondirectional feed from the ground.

I conclude that the sat's own antenna must have a broad beam (low gain) since they surely have to accept its default pointing to a fixed point in space no matter where in the orbit.  No sat could carry enough fuel to continually optimally point its antenna. This probably explains the lower field strengths of Sirius vs XM.

bob c.

Noticed when listening to old airchecks of Musicradio 77 WABC New York, that they played on average 2 songs, then one long or two short commercials, than another 2 songs, and another commercial, then 2 more songs, etc.  This in contrast to radio stations today playing a 40 minute block of music and then 15 minutes of solid commercials.  I realize that commercials are necessary, but I find that I'll accept one or two commercials before I start wanting to hit the button on the car radio to bail to another station.  (I live in one market, and also can listen to another station with a similar format in an adjacent market area, and they time their stop sets at different times of the hour).  I don't know if this listener tolerance to short stop sets has ever been tested.  Or is the current structure an artifact of the way ratings books are done? That stations will sacrifice the last quarter hour for solid 1,2, and 3rd quarters?  Most commercials seem to get played between XX:45 and the top of the hour.

Same thing happened to WJMK in Chicago. Their signal 104.3 FM is "Jack FM"
However WJMK is still around. They are now available online only.
Anyone have anymore info on how this is gonna all sort out?

And down the Empire State Building crashed....

Well, it might as well have with the loss of WCBS FM 101.1!!

Who's lamebrained idea was it to replace the best oldies station on earth with "JACK FM"?! I couldn't believe it.

Friday afternoon at 4:30, I noticed they started playing all sorts of clips from the last 40 years - DJs, music talent, etc. I had left work early, about 5 min to 5pm. An oldie from the 60s was playing. Then, all of a sudden, this weird voice comes on at 5pm announcing "We put the B.S. in CBS!" "The new JACK FM!!"

Then ... "Les get it stahted in heya, les get it stahted in heya" and other modern shit started playing!!

I urge everyone on this newsgroup who lives within 50 miles of the City to write Jack FM and the folks at WCBS to find out what's going on and to protest the loss of this American Icon. "The greatest hits of all time" shall not be allowed to perish from the airwaves!!

-ChrisCoaster

I've "lost" radio stations before. WNEW moved away from the album cut format. WLIR stopped playing new wave. Q104 went from heavy metal to adult oriented rock. I've always bemoaned these losses, but never exactly mourned the loss of a station. Until now.

When I heard that WCBS FM had changed their format, I felt like someone had slapped me in the face. I hadn't listened to the station in a long time, but knowing it existed was like knowing there was a friendly face from the past still out there, smiling at you.

I grew up listening to CBS. I know the words to every doo-wop song. I remember the intro songs - Those oldies but goodies remind me of....WCBS FM. Don K. Reed. Norm N. Nite. The way it always sounded as if they were broadcasting from an echo chamber. My childhood memories are so intrinsically tied to music because there was always music playing in our house. And it was always CBS. Hearing the news of its demise, I felt like a small piece of my soul had been ripped from me. Dramatic, I know. But you have to understand what part this station played in my life....

This Jack-off format ain't gonna work in NYC.  New York Radio has sucked for the last 15 years.  CBS-FM needed a good kick in the ass but this change is total stupidity.  I'm one of the lucky one's.  I 'm able to pick up WOGL-FM 98.1 and the New WPEN-AM 950 for great oldies with Philadelphia soul.  The Gen Pop will now have to sit back and wait for smart station operator to switch to a more agressive oldies format than CBS-FM was dishing out.  I really wish all you oldies fans good luck and speedy recovery from being jacked-off.

Don't forget that Viacom is planning to sell off its radio operation.

This flip is just an attempt, by putting a trendy format on the
former Oldies stations, to make them more salable.  Infinity is
gambling on a spike in the ratings just strong enough to up the
selling price a few bucks.  Of course, it also cuts expenses by
eliminating the on-air talent...

oldies stations near nyc

***>lets make them popular and hope they get lots of money to get BIGGER AND STRONGER. Many have web sites and more info on their programming.

many of these stations are mainly heard in the daytime and definitely at all coastal locations

> am 1250/ 1170---Morristown, NJ--is wonderful-HEARD IN all of north and central New Jersey AND ALL OF Staten Island, Parts of Brooklyn, etc, etc.

> am 1410 eatontown, nj --coastal parts of brooklyn, queens and south shore of long island.

100.1-----TOMS RIVER, nj

> 850 danbury conn --scott shannon's station--north shore of long island, etc

> 1360-north west jersey --WNNJ,---Newton, NJ, great programming---is a Clear Channel operation with a lot of its program coming from CC's central computer.

Another oldies station, WKHL (Kool 96.7) does oldies on FM from Norwalk and has a 3kw (or so) signal, grazing Westchester County. northern nj and long island, etc

1340 Atlantic City station is great but is pretty limited in coverage

WPEN in Philly, 950, covers the southern (Philly) suburbs of NJ. --but some talk parts of week.---i understand the kid tj lubinsky of pbs oldies fame, can be heard here on saturday nite.

103.1 -- long island

SPECIAL COMMEMORATIVE BROADCAST TO MARK DEBUT OF FM

Broadcasting history buffs mark your calendars!  A special commemorative FM broadcast Saturday, June 11, at noon EDT will mark the 70th anniversary of Maj Edwin H. Armstrong's first public demonstration of wide band frequency modulation (FM).

The broadcast will emanate from Armstrong's 400-foot-tall experimental tower in Alpine, New Jersey, (http://www.cscmgt.com/images/alpine.htm)
<http://www.cscmgt.com/images/alpine.htm%29>
overlooking the Hudson River.  An area landmark that also served several New York City broadcasters in the wake of the September 11, 2001, terrorist attacks that destroyed the World Trade Center, the gigantic structure now is owned by CSC Management Inc, headed by Charles Sackerman Jr.  He and Steve Hemphill, WA3ZAE, owner of Solid Electronics Laboratories--a Pennsylvania broadcast equipment manufacturer--have secured a Special Temporary Authority (STA) from the FCC to conduct the FM broadcast on Armstrong's original frequency of 42.8 MHz at a power of 250 W ERP.  They'll use the experimental/STA call sign WA2XMN, reminiscent of Armstrong's W2XMN call sign.

The program itself will consist of David Ossman's dramatic production of "Empire of the Air," based on the book by Tom Lewis.  They also plan to air excerpts from a 1941 test broadcast between member stations of the original New England Yankee Network, featuring actual voice recordings of Armstrong, Yankee Network Chief Engineer Paul deMars and others.  They'll also rebroadcast the final sign off of Armstrong's pioneer FM station W2XMN/KE2XCC.  The station went silent February 25, 1954, following Armstrong's death by suicide.

For those lacking an FM radio that can tune to 42.8 MHz, the broadcast will be simulcast via WFDU(FM) 89.1 MHz, which also will provide a streaming web cast < http://alpha.fdu.edu/wfdu/wfdufm/index2.html>. The entire program will be rebroadcast on the Web at 7 PM EDT on June 14 and 16.  A recording of the complete broadcast will be available for download at < http://www.cscmgt.com>.  Additional information

about the commemorative broadcast and the Alpine tower site is
available on the CSC Management Web site <
http://www.cscmgt.com/index.html>.

I think the basic argument is that listeners change the station as soon
as a commercial comes on, so if you pile all the commercials into one
long slot, you wind up with listeners tuned to the station for a longer
time period at one crack.  From the standpoint of an advertiser, this
should be considered a bad thing, but it results in better identification
with the listener.

No, it's not. It is planning to divest or do trades outside the top 20 to 25 markets, where they feel resources are better put in other aspects of the business.

A ratings increase of a share or so on two stations would not even change the EPS by a fraction of a cent.

It's outa here.  Thank the Internet... especially broadband.  The BBC no longer broadcasts on shortwave to North America because they feel they have more listeners on the Internet.  They are also available on both of the USA's satellite radio services.

And coming soon-- radio on your cell phone.  That will make international broadcasters available everywhere... including metropolitan areas where interference sources and the need for an outside aerial made shortwave listening impossible.

We'd better all hope that shortwave continues and has a future for the sake of getting REAL news. So-called "streaming audio" is a joke, there is nothing "streaming" about it except the malarky coming from the mouths of its proponents.

Satellite as well as Internet information and, yes, news, is too easy to censor or block entirely.

God help us if we have to rely on the pathetic US broadcasters (all 3 of them which own most media now) or satellite/Internet "technology" .In the so-called "Cold War" days I remember hearing how the communists would go up and down the streets with radios tuned to IF frequencies and detect what people were listening to. If you were tuned to RFE or some banned station, you were in trouble. Good grief...does anyone believe that Internet/digital mediums are not being monitored or soon will be?

Smokey
Fed up with the BS

Hi Mike:

- Yes, Shortwave has a future..
for communication over long distances - at low cost
or
for military applications..
or

for commercial SW that doesn't neatly fit into the larger commercial loop... Including Pirates..

As for the cost of fixed stations.. I think WBCQ is on the cutting edge, building a wind farm to power it's transmitters..

Monday, 6 June, 2005

The BBC World Service's flagship technology radio programme, Go Digital, will be available as a podcast from today as presenter Gareth Mitchell explains.

Just go to a podcasting website, click on a programme you fancy and download it to your iPod or MP3 player just as you would with music tracks.

The BBC has been podcasting one or two of its shows for some time and in April, it announced 20 more programmes to be podcast as part of a six month trial.

>From this week, you can download the programme and listen to it on your MP3 player whenever you like. Moreover, with podcasting software, you can subscribe and make sure that Go Digital automatically updates each week.

If you have never heard Go Digital before, podcasting will be a great way of finding out what we are all about.

Each week, we bring you the latest gadgets, novel uses of technology in the far flung corners of the world and analysis of the tech issues that affect you.

Go Digital even offers you people playing clips of gentlemen putting the world to rights in their toilet and it is all available every week on air, online and now on an MP3 player or iPod near you.

How many people can get decent reception for daytime WABC-AM. I'd guess half the population of NY State, plus all of NJ which is about 20 milllion people.  And they get into PA and CT, good for a few million.

I say 26 million, based on the intermediate loop on this signal map:

http://www.radio-locator.com/cgi-bin/pat?call=WABC&service=AM&status=L&hours=D

Is there a better number ?

It got to me just fine. You can post through Usenet and any
correctly-configured news server will send the message to me instead of
posting it directly. Or just email me, but method #1 is the preferred way
to do it.

> Right or wrong, the broadcast regulations *are* the official rules

These rules were thought up before PLL transmitters.
Analog mini transmitters can be all over the dial.  The new digital ones can
lock dead on.

I think the FCC should change the rules to allow higher power levels
depending on the type of equipment you're using.

Low power stations can provide a valuable service and should be allowed to
be part of the media mix.

Radio & Records reports that KXOL in Los Angeles wanted to changed it's Spanish AC to a more pop presentation. But Emmis-- who owns their tower-- put in the lease contract they can veto programming they feel will hurt their stations-- in this case Power 106.

Doesn't the FCC frown on one station controlling the programming of another. Or did that go by the wayside with dereg?

By Macworld staff

People are ready for podcasting because "radio is so boring now," according to iPodder creator Adam Curry.

Speaking of his new podcast show, soon to 'air' on US digital radio station Sirius, he told Wired: "These are things we haven't heard on radio for the past 20 to 30 years. Using the theatre of the mind, using sound as art - this is something we've forgotten how to do in radio."

Curry notes the case of the Catholic priest who podcasted from the Vatican around the time the pope died. "He was walking through places you could not go, deep inside that complex, and it totally blew me away. There hasn't been any place on the radio dial where you'll hear those kinds of shows," said Curry.

Podcasts also benefit because the FCC does not regulate them, explains Curry. "Although they are required to abide by the Digital Millennium Copyright Act - which creates some funky restrictions", he adds. "You can't do things like play two songs by an artist back-to-back. Silly. But they are more free than FM radio, and this makes interesting things possible."

But the one thing podcasting lacks is advertisers. "We really need more listeners to come in, to make podcasting in general more attractive for advertising," he admits.

To everyone concerned, regarding the Listenership Statistics for Radio Free Colorado, some of you may find these numbers of interest:

SHOUTCAST TTSL REPORT (TTSL)= Total Time Spent Listening

Report Date: Tuesday 05/17/2005 12:00:01 AM EST

Radio Free Colorado is ranked #214 overall of #3,221 SHOUTcast radsio stations. This is after only 15 weeks of on-the-air operation.

SHOUTcast 30 day rolling total, taken from 30 days of data:

POSITION: #214

TTSL (Hrs): 85,549

# TUNE-INS: 275,997

5-MIN-TUNE-INS (Converted Listeners): 60,407

After only 15 weeks we are experiencing excellent listenership, considering we are a non-commercial Station.

We are on the list of the top 10 fastest-growing commercial-free stations in operation.

In Germany, we are ranked #4 overall of 2,546 Stations on the statistic tracking website: Liveradio.de Internet Radio Station Guide.

We broadcast a high-fidelity signal in 128k and 32k MP3PRO.

Signed,

Gary Burke
Station Manager
Radio Free Colorado
www.radiofreecolorado.net

Note: Radio Free Colorado is interested in joining a well-established media entertainment network.

Interested parties may contact Gary Burke via our website.

May 16, 2005
by Staff

London

The BBC is to extend its content download trial to 5,000 homes around the UK, allowing people to choose from 500 hours of television and radio programmes to download on to their computers.

The latest phase of the trial for BBC New Media's interactive Media Player will begin in September 2005 and last for three months.

The interactive Media Player allows viewers the chance to catch up on TV and radio programmes they may have missed for up to seven days after they have been broadcast, using the internet to legally download programmes to their PCs.

The latest trial follows a much smaller one last summer with a limited number of people and a small amount of rights-cleared programmes to allow the corporation to test the concept of using peer-to-peer technology and digital rights management to protect rights holders.

The latest stage of the trial will see around 190 hours of TV programmes and 310 radio programmes, as well as local programming and rights-cleared feature films.

The 5,000 triallists will be able to search for programmes they want to watch, filter programmes by channel, select subtitles and, in the case of some series, to collect and watch episodes that they may otherwise have missed.

Ashley Highfield, BBC director of new media and technology, said: "iMP could just be the iTunes for the broadcast industry, enabling our audience to access our TV and radio programmes on their terms -- anytime, any place, any how -- Martini Media.

"We'll see what programmes appeal in this new world and how people search, sort, snack and savour our content in the broadband world."

The BBC will work with Siemens Business Services, BBC Broadcast and Kontiki

Inc as part of the trial.
The news follows a presentation given last week by Highfield at Mediacast, in which he outlined the rapid uptake of broadband and the increasing numbers of people using the internet to access audio visual material.

However, he also used the occasion to warn that take-up was in danger of stalling without the necessary content to attract audiences. He said the lack of which was due to issues with rights, distribution and navigation.

I've not read the R&R story, but judging from "...who owns their tower..." it doesn't look to me like Emmis actually controls KXOL's programming.  KXOL is free to go ahead with the "more pop presentation", as long as they find somewhere else to put their antenna.

47CFR73.239 does prohibit a FM licensee from using its control over a transmission site to "...unduly restrict competition among FM broadcast stations.".  As I understand it, that would, for example, prohibit Clear Channel from obtaining an exclusive lease over the top of the Sears Tower which would prevent Infinity stations from locating there.

However, the KXOL site doesn't seem to be "peculiarly suitable" for an FM transmitter.  Certainly they would have the option of moving

```
elsewhere if they're not willing to abide by Emmis' dictates.

No.  Crystal control is just as accurate as PLL control.  And the FCC frankly
doesn't care _how_ you control frequency, just as long as it stays within
the specified limits.

>I think the FCC should change the rules to allow higher power levels

That's what the whole LPFM licensing is about, and it's what the old Class D allocation used to be about. The problem is that the bands are too crowded for many of the things to be given out. There just aren't a lot of places to shoehorn low power stations today because there are already too many stations on the bands.

Now, if I ran the FCC, I'd be revoking licenses right and left for "failure to provide a public service and contribute to the public good," but I do not.

By Hans Bengtsson
Epoch Times
May 17, 2005

Grimeton, Sweden - The methods we use to communicate with each other are under constant development, and technology offers ever more sophisticated means of human contact.

By looking back, we can get an idea about where this progress will lead us in the future. In Grimeton, just outside Varberg on the Swedish west coast stands a piece of IT-history of world interest.

Six steel towers, 127 meters high, are visible from a great distance in the level landscape. Despite their impressive size, the towers are not what�s important. They are simply supporting the eight antenna wires, almost invisible from the ground. These wires kept up the connection with the USA, when the ultra-longwave transmitter was in use during the 1920�s and 1930�s. It is now on the UNESCO World Heritage List.

The poles are strategically located, with nothing but the open sea in front of them, all the way to New York. The site was carefully selected when the Swedish government and parliament decided to modernize communications in the early 1920�s.

Experience from World War I, in which sabotage of international cable communications had made clear the increasing need for wireless communication, less vulnerable to third party interference. However, wireless communication wasn't completely new when the transmitter in Grimeton was built. The Italian engineer Marconi had developed radio telegraphy in the late 19th century (see adjacent article).

In Karlsborg in the south of Sweden, a transmitter based on earlier "spark" technology was available for Morse code communication with other countries. It wasn't powerful enough for transatlantic communication, however, and its technology had become outdated.

The transmitter installed at Grimeton was state of the art in 1924. A 200 kilowatt AC generator would generate the signal, which, provided with the right kind of auxiliary equipment, was capable of transmitting both speech and music. This was not its purpose however. It was used strictly for telegraphic communication.

Originally there were two alternators in Grimeton. Now one of them is left and it is the only still functioning Alexandersson alternator in the world.

The transmitter was built in the USA by General Electric. It was designed by Swedish immigrant Ernst Alexandersson, born in 1878. The new innovation was its AC generator which, unlike earlier DC models, generated a carrier wave which was constantly on the air. Apart from Morse code signals, speech as well as music could be modulated with this carrier wave. A first prototype was completed in 1906, and on Christmas Eve that year, the first transmission was made. People out at sea and others in possession of telegraphic receivers, were then surprised by speech and singing. The first audio radio transmission in Swedish was a Christmas gift for them.

The radio transmitter at Grimeton was part of a global radio link system for telegraphy which, by the early 20�s, included 18 stations. It uses ultra-long-wave, with a wavelength of just over 18 kilometers for the first years, later to be reduced to just over 17 kilometers. The two Alexandersson generators at Grimeton were online by 1924.

Today, one remains. It is the only surviving, still functional, Alexandersson generator in the world.

The Swedish government granted 4 million Swedish crowns towards the building of the station, and construction began in 1923. The first transmission from

Grimeton was carried out during the night of the last of November in 1924. July the following year, the station was officially opened by the Swedish king Gustaf V, by sending a telegram to the president of the United States Calvin Coolidge, in which he praised the transmitter and the "democratic rule, under which, millions of Swedes have found a home."

Harald L�vhede and Bo Johansson are members of the Alexander society, named after the designer. The society is responsible for taking care of the World Heritage in Grimeton. They provide guided tours of the station, which was online more or less around the clock during the 20�s and 30�s.

Bringing the machine online was an involved procedure, taking some 10 to 15 minutes. Bo Johansson shows some of the many tasks performed at startup, and plays back a recording of the procedure, taking you back in time. You can hear the power getting switched on, cooling pumps starting up and the big, heavy generator wheel slowly accelerating, all amidst a deafening noise. The machine is brought online regularly even nowadays, for maintenance, to grease the ball bearings. It�s been done several times this year already, says Harald L�vhede.

At the operator table, a few meters away from the noisy generator, the station manager would sit and tap out the signals, using the Morse key. Bo Johansson says that there�s not much difference between the Morse signals this station used to transmit and todays computerized communication. Both use "ones and zeros" or "information- non-information." Grimeton was capable of sending a hundred five-letter words a minute, but in actual use never sent more than fifty.

Nowadays, modern technology has taken over at Grimeton. In 1939, shortwave transmitters took over most of the telegram traffic. In the 60�s, the Alexandersson generator was replaced by another ultra-longwave transmitter, still in use today for submarine communications. Only the really long frequencies can reach deep into the ground and water.

This is the reason why it�s been possible to preserve the transmitter for coming generations. The Swedish navy has had a deal with the Grimeton station for many years, the proceeds from which has made the preservation of the transmitter possible.

I wish you were running the FCC, stations these days simply don't do
any public service.  Running recorded Public service programs at 4 am on a
Sunday morning won't cut it in my book.

Can KXOL move to another site given the crowded nature of the allotments in Southern California?

There are so many stations nearby, plus Mexican allotments, that I'm wondering if there is simply no way to move away from the old Power 106 site.

Also, since this is what company telling another what they can do with what they own, and given the type of business being run here, commercial radio, can charges under other business laws and antitrust laws be brought against the party that telling the other what they can and cannot do with their station be considered illegal under other US law, forget the FCC regulations?

>From what I got from the R&R report, it sounds like KXOL wanted to flip to Hurban. If the complaining party that told KXOL they could not flip to Hurban. does it with one of their stations, then there could be a real serious legal case coming down the line.

The rationale for the veto was it would cut into Power 106's listener base. Hurban draws listeners from Spanish formats and from

CHR/Rhythmics. Typical listener base is younger, 2nd/3rd generation Hispanics in the US already and who also are typically bilingual as a result.

I don't wish it on Emmis, CC, or anyone else involved for that matter.

I agree, but the chances of my ever running the FCC are about as good
as Clear Channel putting a classical station on the air.

Oh yes, and annual proof of performance measurements.  I'd bring them back.

For sale:

(The "Radio Crazy" is baaaakkk!!!) Hi!

Partial ownership in new low power TV station licensed to serve Rehoboth Beach, Delaware. Channel 59, 20,000 watts ERP, 24 hour license.

This is a joint venture. There is an element of risk and you could lose all or part of your investment.

Active or inactive investors with at least $10,000 each are welcome.

You can request a free copy of the business plan. It is in Word format. I can send it via email attachment.

Tel: (478)741-1710 in Macon, GA.

73,

Meyer Gottesman, W6GIV

Actually, the FCC is more likely to penalize KXOL for having entered into an agreement that gave program control to someone other than the licensee.

Emmis will probably argue that they're not forcing KXOL to remain on their tower and are free to move and change format. If there were no options (costs of moving aside) there might be some civil legal remedy.

It's pretty dumb for a station to agree to anything that prevents them from being competitive in a market.

In the 70s the FCC issued an order that stations could not enter into a contract (in this case Shulke Radio Productions) that required the station to take orders from the syndicator.

>>These rules were thought up before PLL transmitters.
Analog mini transmitters can be all over the dial.  The new digital ones can
lock dead on.<<

Wrong.  Mistuned, overdriven or modified PLL transmitters can be all over
the dial too.  "Digital" does NOT automatically mean "better."

For sale:

(The "Radio Crazy" is baaaakkk!!!) Hi!

Partial ownership in new low power TV station licensed
to serve Rehoboth Beach, Delaware. Channel 59, 20,000
watts ERP, 24 hour license.

This is a joint venture. There is an element of risk
and you could lose all or part of your investment.

Active or inactive investors with at least $10,000
each are welcome.

You can request a free copy of the business plan. It
is in Word format. I can send it via email attachment.

Tel: (478)741-1710 in Macon, GA.

73,

Meyer Gottesman, W6GIV

Are you still trying to sell this turkey?

Steve - I'm not saying squelch this guy, but shouldn't he be held to a once-per-facility limit, at least? This is worse than timeshare...at least they have limits as to how many units-weeks they can sell.

If they actually had some meaning to my life, yes.  But you and I both know
that, as these programs aren't exactly profit-centers, they get some pretty
scant funding which limits the ability for them to actually attain
relevancy.

Good to hear from you, Rich!

There are very few "other places."  KXOL can not go up Mt. Wilson, nor can
it go south or East. It is pretty locked in, and Flint Peak, where it

currently is, is a great site.

No, I did not run those lousy programs.  Public service should be part of what the station does every day.  The typical Public service programs hidden away on Sunday morning do the public no good.  The station might was well be playing music.

I would bet there would be fewer civil laws that would apply than FCC
regulations. KXOL knew what they were signing when they agreed to the
contract terms. Supposing KXOL's lease was up and another company
needed DTV antenna space. Why would this be any different than a
landlord leasing space to another tenant. What if Emmis decided to
triple the rent at the end of the lease? Would they be required to
keep SBS as a tenant even if they refused the new terms?

IF they were well presented I probably would. Usually our NPR affiliate here has switched back to music from news. THese days for lack of anything better on the dial I spin the dial one notch up the band and tune in wwoz here in NEw Orleans if I'm traveling to work or about the city. AT home I only listen to npr news when I get up in the mornings and occasionally wwoz. OTherwise I'm listening to whatever audio is relevant to the project I'm producing or my own music collection which is far more varied than anything I can get on commercial radio.
HOwever I can say that for the most part well presented public service programming at 6:00 P.M. would be something I'd make an effort to tune in.

I'm like the poster you quoted. People such as Mr. DOrsey would do a much better job of running an agency such as the FCC. True public service would be more than just something that had to receive some lip service to keep one's broadcasting license.

Richard Webb

THE fastest growing Rock music station on the Internet?

Is Radio Free Colorado.  http://www.radiofreecolorado.net

To everyone concerned, regarding the Listenership Statistics for Radio Free Colorado, some of you may find these numbers of interest:

SHOUTCAST TTSL REPORT (TTSL)= Total Time Spent Listening
Report Date: Sunday 05/22/2005 12:00:01 AM EST

Radio Free Colorado is ranked #159 overall of #3,229 SHOUTcast radio stations. This is after only 16 weeks of on-the-air operation.

SHOUTcast 30 day rolling total, taken from 30 days of data:

POSITION: #159

TTSL (Hrs): 112,014

# TUNE-INS: 367,715

5-MIN-TUNE-INS (Converted Listeners): 78,883

After only 16 weeks we are experiencing excellent listenership, considering we are a non-commercial Station.

We are on the list of the top 10 fastest-growing commercial-free stations in operation.

In Germany, we are ranked #4 overall of 2,546 Stations on the statistic tracking website: Liveradio.de Internet Radio Station Guide.

We broadcast a high-fidelity signal in 128k and 32k MP3PRO.

(DSL/CABLE/T1+) Listeners can tune-in to the 128 kbps broadcast by using the following station "URL": http://66.160.128.50:6950

(Dial-Up Modem) Listeners can tune-in to the 32 kbps broadcast by using the following station "URL": http://209.51.162.163:8560

Signed,

Gary Burke
Station Manager
Radio Free Colorado
www.radiofreecolorado.net

Now a "Top 20 Internet Station of Rock" -- Worldwide

Note: Radio Free Colorado is interested in joining
a well-established media entertainment network.

Interested parties may contact Gary Burke via our website.

>Public service should be part of
> what the station does every day.  The typical Public service programs
> hidden away on Sunday morning do the public no good.

Remember when top 40 stations had talented and clever news people who actually crafted listenable newscasts?  They were fun on slow news days and credible when the public need arose.   Public service was also part of the format-- not a block of shows hidden on the schedule.

In the Tampa area, during the 50's, 60's and70's.. News was frequently an afterthought.  Rip and Read was the norm. (And most of the news budget went for the TTY, telco, and service, rather than the humans doing the actual reading.   A -few- stations had a real news team, but it -all- depended on how profitable they were.   As profitability suffered, news was the first to go.

Public Service?  The stations that were on 24x7 simply put their "What's happening in the schools" programs on at 3 am. They put on transcriptions supplied by the government ("Forests today!", "Army Recruiting" and so on) and occasionally programs provided by the teacher's unions. Did they ever identify the propaganda pieces as such, or the suppliers of them? No..

They were -boring- and total wastes of time.  How much did they put into those shows? Nothing. No budget.. Just get a talking head to come into the station one afternoon and have them talk about how great things were. Get the Sheriff's spokesman? Good.  Get the head of the school board. More boredom.

At the TV stations, the "public service" was aired either late at night, or early on Sunday mornings.  Again, the budget for those shows was very limited... Get a news guy to sit in one chair on a empty set in the studio, and some local politician to sit in the other set... Have 2 cameras with static shots of the two folk, and let the tape spool.  No one listened to them at 5 am on Sundays.

The only exception to that was when the news director did a "Sky is falling" show about energy that aired in prime time.  "We will be totally out of oil by 1995!" (this was in 82 or there abouts.. ) - At the rate we are going, by 1995, there won't be any cars moving. We have to buy econoboxes that get 50 mpg if we want anything available to make plastic with." "We have to have mass transit that runs on something other than oil so that our economy can survive." .... Like the Tampa Bay tourist economy would survive on coal burning airplanes carrying tourists into town?

Well, Joe is long dead.. The folk he interviewed from the Sierra Club are long dead. (They were in their 70's then).. and the show got NO ratings at all. But -THAT- was the limit of "public service" on the air in the 70's and 80's..

Yes, I remember that from the 50's and 60's. Every time one of the newscasts
came on, I would go to the other local Top 40 station until the news came on
on that station, when I would go back. All my friends did the same thing.

Fortunately, the US realized what places like Mexico had known all along:
the market will provide amply for news needs and specialized news and
information stations will be created naturally. Mexico has, in general, more
and better news and information stations than the US does, and none was ever
forced to do news and information programming.

Mexican stations were (are?) still forced to run that dreadful Sunday
night program, though (didn't it sound like someone was talking over a
barrel?)

La Hora Nacional still is a must carry. However, we are talking about an hour that typically has a 3.0 rating for persons using radio, so it is not important.

Mexico City has more news and talk stations than NY, LA and Chicago combined.

I don't see why people go to so much trouble to broadcast illegally when it is possible to broadcast legally & cover large areas, of course it is only with the AM band this is possible but you can get near FM sound quality with the right audio equipment. We have customers that cover small cities legally with multiple transmitters.

For sale:

(The "Radio Crazy".........IT is baaaaaaakkkk!!!) Hi!

Partial interest in new LPTV station licensed to serve filthy rich Rehoboth Beach, DE. This is a joint venture. There is an element of risk and you could lose all or part of your investment.

Active or inactive investors with at least $10,000 each are welcome.

The CP expires May 5, 2007. Repeat, 5 May 2007.

It is for channel 59, 20,000 watts ERP on main lobe, 24 hour license. We will file for an HD (digital)channel as soon as the FCC opens the next window.

Tel: (478)741-1710. Please do not mask caller ID as that call would be blocked. I will never call you back if you indicate no interest. We ain't selling used cars here! Hi!

73,

Meyer Gottesman, W6GIV
Macon, GA

They're not telling KXOL what to program. This is strictly business, and has nothing to do with federal law. It is VERY much like restrictive covenants and homowners associatins. KXOL signed the lease in the first place. Now they don't like it. Too bad. Shouldn't have agreed to it in the first place.

-George Csahanin
Awstin, TX

I used to travel a lot - fortunately no longer do so - but would listen to a news report of a current event on a given subject in Japan - then next day hear the US version on that same subject - then next day hear the BBC or European view - was very hard to tell we were talking about the same event - the skew was extreme from each source concerning that same event - what was true? well - not sure - and current extrapolation to today approach concerning US HomeLand Security news etc etc etc in US news compared to the rest of the world view of news - well - guess I will be investigated as a non US patriot for this post - whatever

likable PC correct news is one thing - reality (whatever that is) is another - I would prefer reality or at least objective facts minus the politics and skew of political agendas

Do you have a windmill I can tilt at????? Low rates - guaranteed success - dragons extra!

Fred-

Doesn't sound like you're speaking of Awstin stations. Having lived here off and on for 19 years, I can't picture any one here crafting a listenable newscast. I listen to the 5,000 ounce chimpanzee every morning, and the newscasts are about on par with a college radio station.

Growing up in the NY market the newscasts on WABC were good and paced well. But that was a long time ago. When the music died in the early 80's I stopped listening.

When I played radio in the early 70's the news was a joke. They tried to be serious, but the main goal in the control room was still to crack the newsguy.

George Csahanin

There's breaking news on this story, there may already be other posts in the moderation queue due to it.

El Sol is now 'Latino 96-3' as of midnight.  Yes, it's just about as 'hurban' as one of these can get, with a bilingual format.  Full details on the radioandrecords.com website.

Does anyone know the history and / or the duration of the public
service radio series sponsored by the government called "Stars for
Defense." I have some LPs that date back to 1957 and as late as 1965.
Any additional info would be greatly appreciated.

FOR IMMEDIATE RELEASE

Innovative Classic Rock Internet Radio Station "Radio Free Colorado"

Leads the Way by Broadcasting in 64 kbps Orban AAC Plus Format -- 05/28/05

www.radiofreecolorado.net

For Radio Free Colorado AAC Plus is no longer the future but has already arrived. Dolby Labs, Nokia, Orban (the major supplier of professional broadcast equipment worldwide), Winamp and many others are already adopting and supporting AAC Plus. Technically it is a more efficient transmission medium, capable of bettering 128 kbps MP3 at half the bitrate (64 kbps).

Using lower bandwidth to send more audio information not only benefits manufacturers and broadcasters by lowering costs but benefits consumers as well since using less Intenet bandwidth will lead to lower prices for Internet service.

The main difference you will hear is in the treble. After over a decade of people being used to listening to the "edgy" sound artifacts caused by MP3 encoding/decoding, people have become accostomed to the treble sound of MP3, even though it is quite inaccurate. Technically what you are hearing now with Orban's AAC Plus format is more accurate treble reproduction without the "hard, edgy" artifacts of MP3. So it may take people used to the "harder, edgier" sound of MP3 a while to get used to the softer, more accurate treble response of AAC Plus. AAC Plus is by far more faithful to the source, especially in the treble. Users who dislike the change need only turn up the treble or use the equalizer on their Winamp players if they feel the treble is too "soft".

EBU (European Broadcast Union) listening test results compare the performance of different Internet transmission formats vs. the quality of an original source (a compact disc). The expert listening panel preferred the sound of AAC Plus over all the other formats.

It will simply take some time for listeners ears and brains to re-adjust to hearing the more accurate audio of AAC Plus.

Since AAC Plus is more accurate, it can only sound as good as the sound quality of the source you are feeding into it. Savvy Internet Broadcasters will find they can no longer get by on using mediocre-quality 128 kbps MP3 files as the source material for their AAC Plus broadcasts. If they do, sound wise they will get trounced by stations (such as Radio Free Colorado) who don't use MP3's for their source material.

Radio Free Colorado may be a year (or more) ahead of other Internet Brodcasters in making this change from MP3 to AAC Plus, and it certainly did cost us money. But we like it that way, to stay ahead of the curve, or rather to be at the beginning of it.

Initially we expect our listenership to decrease for some period of months as confused listeners unable to receive our broadcast figure out they need to use Winamp versions 5.05 through 5.09 to receive our new AAC Plus broadcast format. Other Internet Radio players will follow as more stations make the transition to AAC Plus, which is inevitable. The MP3 standard is almost 20 years old, and just as CD technology and DVD technology has evolved with new formats and new players, so must Internet Radio.

XM Satellite I am told broadcasts in a version of AAC Plus at a bitrate of 48 kbps for its channels. We are offering even more bandwidth and extended treble capacity by broadcasting at 64 kbps.

Keep in mind the EBU testing results were done comparing 48 kbps AAC Plus to a Compact Disc, and 48 kbps still scored in the 80th percentile. Tests done comparing 64 kbps AAC Plus (the format Radio Free Colorado uses) score in the mid 90th percentile.

Hector Duarte Jr
All Headline News Staff Reporter

London, England (AHN) - Big Ben stopped ticking at 10:07 p.m. Friday and resumed shortly after, only to stop once again at 10:20 p.m. and remain idle for the next 90 minutes.

Officials are still unclear why the clock stopped ticking, but speculate the halt could be weather related. A recent heat wave has swept England, causing temperatures in London to reach 90 degrees Saturday.

An engineer with The Palace of Westminster, speaking on condition of anonymity, told the AP, he had been informed it was a minor glitch, which was corrected soon after.

This is not the first time Big Ben experiences problems. In 1962, snow caused the clock to ring in the New Year ten minutes late. In 1976, a piece of its machinery broke and the clock stopped working; it also halted on April 30, 1997 and again three weeks later.

Big Ben is housed in St. Stephen's Tower on the bank of The Thames River. Completed in 1858, the tower stands 315 feet tall and survived German Luftwaffe bombing campaigns during the second World War, continuously marking time to within one-and-a-half seconds of Greenwich Mean Time.

Tino,

>I am seeking to podcast. I have broadcasted wiamp, but never<br>
>Podcasting. On some padcast websites do we donload our 3mp into a file?<br>
>Is DSL necessary?

You would have to host the MP3 file on the Internet you can look at Libsyn. I would suggest using FeedForAll's software for creating the podcast feed - there is a tutorial at: http://www.feedforall.com/podcasting-tutorial.htm

Best
Jude

A Canadian record for the world's deepest live radio broadcast may soon join records for the world's deepest mine, deepest cave and deepest half-marathon in the Guinness Book of Records.

The necessary documentation has been sent to a Guinness adjudicator in London after CBC Sudbury completed a live broadcast from more than two kilometres underground yesterday.

Points North, CBC Sudbury's afternoon radio show, was broadcast from Inco's Creighton mine. It took host Dan Lessard and others nearly 40 minutes to reach their destination: the broadcast was conducted from the part of the mine known as "the deep" -- located underground at a depth of about four times the height of Toronto's CN Tower.

Chris Marais, the Guinness adjudicator for sports and music, said that the advance paperwork for the possibly record-setting broadcast appeared to be in order and that he was hoping for a quick turnaround.

"Radio broadcasting is something that's done all around the world, so it's obviously of global relevance. And we've taken the view that deepest live radio broadcast is something we want to monitor," he said.

I've heard this, caused by a transmitter fault. (the station, on 92.9, was transmitting every 400KHz - which really raised havoc with the local stations on 92.1 and 93.7!) It was like that for a few hours on a Saturday, then promptly cleared up.

SSB is a form of amplitude modulation. SSB is just one sideband of a standard AM signal, without the carrier.

>
> On a properly tuned SSB receiver, the AM transmission only partially

If a SSB and standard AM signal are sharing the the same frequencies, they will interfere with each other.

>

Huh? Is this supposed to be some sort of scheme for getting propaganda broadcasts into China? How many Chinese own these imagined fancy radios?

Which numbers stations use this technique?

>
> 1. What is the math behind this transmission working (SSB is a form of Angle
> Modulation, not Amplitude Modulation)?

Single Sideband IS amplitude modulation. One of the AM stereo methods used independent sidebands for each channel. This was purely amplitude modulation. Other methods used phase modulation.

The Radio Amateur's Handbook has a good description of the various forms of amplitude modulation and frequency/phase modulation. There may be a copy at your local public library.

There's a few websites about AM stereo modulation.

>

AM interferes with SSB and vice-versa. If there were ways to seperate them, then radio amateurs would use those ways.  As it is, some SSBers are annoyed by AMers because AM uses twice the bandwidth as SSB, as well as throwing a big heterodyning carrier into the mix.

Frank Dresser

Doesn't make sense to me.  The SSB signal *will* be decoded by the AM detector, even if it isn't intelligible.  There will be mutual interference.

A common multiplexing technique is to use an AM signal where the upper
and lower sidebands carry different modulation.  On a regular AM
receiver you'll hear a mix of both programs, but if you use an
appropriate filter (commonly found in SSB receivers) you can select
either program without interference.

If there's a carrier, the SSB signal would be demodulated on a regular
AM radio, wouldn't it?  Are you thinking of ISB?

Numbers stations are meant to be cheap and dirty, at least as far as
the folks in the field are concerned. So what numbers station is going
through such hassles to do some multiplexed transmission when there

isn't exactly a high premium on their broadcast time. That is, if they want to broadcast more signals, there is plenty of time to do so.

I'm guessing by angle modulation you mean phase modulation, and SSB is not phase modulation.

If you understand mixers, you generate AM by feeding an audio signal that is riding on a bit of DC  into a mixer. The DC into the mixer produces the carrier, and the AM into the mixer produces the sidebands. Without the presence of DC,  you would get DSB (double side band), which is like AM with the carrier suppressed. To generate SSB, you could either filter off one of the sidebands of DSB, or uses two mixers in quadrature and feed the audio through a Hilbert transformer to get it into quadrature, then sum the right signals to get either LSB or USB. The diagram should be in any basic communications book and probably on the net if you do some searching. The Hilbert transformer is a mathematical notion, so the book might just show a box that takes 0 degrees and outputs 90 degrees independent of frequency. In real life, how this is done depends on the relative bandwidth over which you want to achieve the 90 degree phase shift. Often the audio goes into two filters designed such that the difference between these filters is 90 degrees.  Modern writings on Hilbert transformers are likely to be DSP, so you would need to find a book (i.e. pre-Geek) to see this done with analog filters.

I'm going to pass on the demod question as you phrased it, but I think if I had to recover some stealthy USB riding on top of AM, I would recover the LSB of the AM signal as one signal. Then recover both USB signals (which are really sharing the same spectrum) as another signal, then subtract the demod LSB from the demod USB combo to yield the stealthy USB audio.

No way. The SSB signal will in fact interact constructively and
destructively with the AM carrier, just as the AM sidebands do.
>
>On a properly tuned SSB receiver, the AM transmission only partially
>interferes with the SSB transmission.
Only as long as none of the original AM sidebands occupy the same
spectrum as the AM signal. If it doesn't occupy the same spectrum,
then it isn't being muxed.

SSB is NOT angle modulation. It is in fan an amplitude modulated
signal (watch the S-meter whlie receiving an SSB signal). It is AM
less one set of sidebands and a carrier.

AM radio multiplexing question: transmitting SSB [in sync?] with AM, where SSB is at a different transmitter site.

I understand that it is possible to frequency multiplex SSB [inclusive of ISB] transmissions on top of AM transmissions, especially on SW.

The AM transmission is decoded by the envelope or PLL coherer, thus the SSB transmission is ignored.

------------------------------
Assumptions:
The AM transmitter and SSB transmitter are assumed to be separated by at least [0.5-1.1] ionospheric hop(s).
On a properly tuned SSB receiver, the AM transmission only partially interferes with the SSB transmission.

Some numbers stations use this transmission technique [one hides behind Radio Moscow English Service], but this transmission technique is just as valid if [for example] Radio Free Asia were to use this technique by transmitting over Chinese domestic radio.

Practical Example (E10 Hides) [Dammed clever!!!]
http://www.simonmason.karoo.net/page445.htm

------------------------------

1. What is the math behind this transmission working (SSB is a form of Angle Modulation, not Amplitude Modulation)?

2. Are some receivers more affected by (interference where) SSB
transmissions superimposed over AM than others?
(PLL versus SYNC vs Envelope Detectors)

All of the radios in the house get exactly the same thing.

You'd think that such a thing would have a bandwidth of less than 400kHz.
This thing has a bandwidth of close to 4MHz, with _exactly_ the same FM
signal on _every_ harmonic between +2MHz and -2MHz.

True.

BTW, we're in Australia, so it'd be the ABA (Australian Broadcasting
Authority) in place of the FCC.
I'll have to bring it to the attention of the manager of Reef Rhema (one
of my friends) when I see her tonight.
I've been trying to bring it to the attention of Vision FM, but seem to
have failed.

Your receiver is probably being overloaded by the strong signal.

Do somthing, or anything, to attenuate the signal received from the
antenna.

Being that far off the normal frequency is not subcarriers.  The bandwidth
is 200 KHz.  Of this about 150 KHZ is used for the normal FM data.  Of what
is left over sometimes this is used for the talking books, background music
for stores, pagers, and other things.
If you are recieving the station at 500 khz or more away then you have
defective equipment or the station is transmitting way out of what it is
suspose to be.

How close to the transmitter are you? I remember living across the road
from a Tourist FM88 station and it had a dirty transmitter, but because
my equipment didn't cost thousands (for filtering etc) and wasn't new
they said they couldn't do anything (more like wouldn't). I could pick
it up on my old receiver in various places from 4mhz-800mhz.

>I've heard this, caused by a transmitter fault.

We have this sometimes with police radio transmitters. It is one single make of transmitter which shows this problem now and then - exchanging the PA cures it. With those radios the signal shows up every 80 KHz.

If you wanted to transmit stealhily, you'd put modulation power in the difference between the sidebands, ie. the AM stereo difference channel.  So you'd modulate one up and one down, so a receiver would pick off the same audio signal with or without your modulation.

You decode it by listening asymetrically to the sidebands, eg. SSB or even synchronous detection on a single sideband, or AM detuned nearly to distortion.

In fact WFAN 660 NYC had a 120 Hz hum on its signal for a couple of months that was only in this difference channel, that apparently went undetected by even the engineers; and WOWO 1190 Ft Wayne I think had some strange low frequency modulation on theirs the same way a couple of days ago (can't check them now because there's a thousand stations on the frequency, at 4am) audible only if you receive a single one of the sidebands.

Hello,

Does anyone have the fileformat of an ASC file wich is a Powergold 8
file? Or an example ASC file with two or three records is enough. I'm
using it to use the files for importing in a radioautomation software.
Thanks a lot.

"Max Power" <mikehack@u.washington.edu> wrote in message
news:d4h2dc$eek$1@xuxa.iecc.com...
| AM radio multiplexing question: transmitting SSB [in sync?] with AM, where
| SSB is at  a different transmitter site.

| I understand that it is possible to frequency multiplex SSB [inclusive of
| ISB] transmissions on top of AM transmissions, especially on SW.

| The AM transmission is decoded by the envelope or PLL coherer, thus the SSB
| transmission is ignored.

| ------------------------------
| Assumptions:
| The AM transmitter and SSB transmitter are assumed to be separated by at
| least [0.5-1.1] ionospheric hop(s).
| On a properly tuned SSB receiver, the AM transmission only partially
| interferes with the SSB transmission.

| Some numbers stations use this transmission technique [one hides behind
| Radio Moscow English Service], but this transmission technique is just as
| valid if [for example] Radio Free Asia were to use this technique by
| transmitting over Chinese domestic radio.

Your assumptions are bogus.  No "properly tuned" SSB receiver will be unaffected by energy present in the passband for the received RF.  And how you would presume to sync two transmitters that far apart, when propagation effects would make very challenging any syncronous operation, is another problem.

| 1. What is the math behind this transmission working (SSB is a form of Angle
| Modulation, not Amplitude Modulation)?

SSB, as was told to you earlier, is AM modulation.  FM (or phase...maybe this is what you mean by angle) modulation is not.

| 2. Are some receivers more affected by (interference where) SSB
| transmissions superimposed over AM than others?
| (PLL versus SYNC vs Envelope Detectors)

As the vast majority of AM detectors are envelope detectors, and these would be distinctly affected by your scenario, I'd say this idea of yours is DOA.

Give them a call.
Talk to the engineer.
Tell her what you are hearing.
If they do have a problem, they will be very happy to know about it.

Maybe, but you're more likely to be seeing images inside the radio.

>Have any of you experienced this kind of problem with your
>equipment, and what was it caused by?

I see it all the time with cheap receivers.  Look for an IF section that is oscillating, for one thing.

Check out "The Phasing Method of SSB Generation" on
http://members.tripod.com/michaelgellis/mixerscom.html
It has a diagram of how I was explaining to generate SSB. The diagram has the math for the signals, so you can see how the SSB is eventually generated by generating two DSB signals, then cancelling one of the sideband by summing or subtracting the signals.

I'm going to let it slide, but I really don't like those comments about SSB being AM if you blah blah blah. They are true, but I don't believe they are useful in comprehending the modulation scheme. It is better to think of SSB, well at least USB, as just the voice signal (baseband audio) shifted up to a radio frequency. [If the voice signal was a 1Khz tone and the carrier was 10Mhz, then there would be a signal at

10Mhz+1Khz. It's that simple.] When you demodulate USB, you basically shift it back down to audio with a mixer. If you don't shift it correctly, you get the Donald Duck sound since the frequencies are offset a bit. LSB is slightly different in that the audio spectrum is reversed, much like that cheap frequency inversion used in "secure" communications.

I understand your scheme, though it seems to me for demod you would subtract the sidebands assuming you had two demodulators.Or just generate say L-R if you had a stereo AM radio.  In any event, your method would be the best way send a stealth signal on AM.

WWV plays games with the sidebands, i.e. they are not identical.

Do you mean portable reel-to-reel recorders?
Google Images comes up with things like these:

http://www.schuepbach.org/files/tonband/Europa.html
http://www.rolaa.de/sehensw/radio/tonband/tape_ove.htm

They don't need to hide.  Their security comes from their codes, not some trick modulation scheme.  Oh, and that trick modulation cat has been let out of the bag by radio hobbyists.  Well, that trick modulation scheme might still be secure, assuming the NSA doesn't know anything about radio and doesn't have internet access.

I don't know just what the Russians are doing, but I'll make a guess.  I think the modulation might work as described if the "hidden" transmission is double sideband, with one sideband inverted to cancel the other sideband. This isn't really a very stealthy mode, as the audio would be detectable on an SSB radio and noticeable on a mistuned AM radio or when propagation attenuates one sideband.

But a receiver could be made in which one side of the receiver's bandpass is inverted and mixed with the other side of it's bandpass.  This hypothetical receiver would internally suppress normal AM transmissions as well as wideband noise such as from lightning.  This mode might be more useful for emergency communications in noisy conditions, maybe even as an analog alternative to digital modulation.

The Russians might have been experimenting with a different analog mode in the SW bands and were monitoring the effects against their own high power broadcast transmitter.  A standard AM DSB radio should suppress the hidden transmission and allow the broadcast to get through.  A DSB radio with one channel inverted should suppress the high power broadcast interference and allow the secondary transmission to be heard.

It's not multiplexing, really, it's sort of a phantom signal. The two sidebands both broadcast the AM signal. The difference between the two sidebands gives you the phantom. You can probably hack up any of the modern dual-sideband-with-reimpressed-carrier "fake AM" transmitters to do this. The bandwidth of the phantom channel is poor, but fine enough for CW or RTTY.

>On a properly tuned SSB receiver, the AM transmission only partially interferes with the SSB transmission.

Depends on the sort of detector the receiver has.

>Some numbers stations use this transmission technique, but it just as valid if say Radio Free Asia were to use this technique by transmitting over Chinese domestic radio.

I am not sure why numbers stations would do this. Numbers stations _want_ folks to be listening in. One of the big things about numbers stations is they can be used to make it look like your country has a huge espionage network, when they actually just have a guy in a closet with a KWM-2.

>1. What is the math behind this transmission working (SSB is a form of Angle Modulation, not Amplitude Modulation)?

Check out the Kahn AM stereo system references. The system is basically the same, with the L-R channel being carried as the phantom signal on the Kahn system.

>2. Are some receivers more affected by (interference where) SSB
>transmissions superimposed over AM than others? (PLL versus SYNC vs Envelope
>Detectors)

This is very well addressed in the Kahn AM stereo docs.  The answer is yes.

AM radio multiplexing question: transmitting SSB [in sync?] with AM, where SSB is at a different transmitter site and probably not synchronized with the 'target' AM transmission.

I understand that it is possible to frequency multiplex SSB [inclusive of ISB forms of SSB modulation] transmissions on top of AM transmissions, especially on SW.

The AM transmission is decoded by the envelope or PLL coherer, thus the SSB transmission is ignored.

-------------------------------
Assumptions:
The AM transmitter and SSB transmitter are assumed to be separated by at least [0.5-1.1] ionospheric hop(s).
On a properly tuned SSB receiver, the AM transmission only partially interferes with the SSB transmission.

Some numbers stations use this transmission technique [one hides behind Radio Moscow English Service], but this transmission technique is just as valid if [for example] Radio Free Asia were to use this technique by transmitting over Chinese domestic radio.

Practical Example (E10 Hides) [Dammed clever!!!]
http://www.simonmason.karoo.net/page445.htm

I agree that this interference case is 100% true for 'near field' conditions -- but when both signals arrive by skywave -- it seems to be nebulous. I am interested in the science here...
> Your assumptions are bogus.  No "properly tuned" SSB receiver will be
> unaffected
> by energy present in the passband for the received RF.  And how you would
> presume to sync two transmitters that far apart, when propagation effects
> would
> make very challenging any syncronous operation, is another problem.

Myself I don't fully understand the mathmatics of why SSB is considered to be a special case of Angle or Phase modulation -- but that does not mean that I am ignoring the obvious AM transmission that is the base for SSB.
=====================
> | 1. What is the math behind this transmission working (SSB is a form of
> Angle
> | Modulation, not Amplitude Modulation)?
>
> SSB, as was told to you earlier, is AM modulation.  FM (or phase...maybe
> this is
> what you mean by angle) modulation is not.

Information on recivers and detectors that can cope with this special modulation is still sketchy. I would like more data here.

You've heard about podcasting, well Infinity will flip a news/talk station they own in San Francisco, KYCY 1550, to all-Podcasts starting May 10th.

Here's the media report in Radio and Records.  The website name is included in the article.

http://www.radioandrecords.com/Newsroom/2005_04_27/infinitylaunches.asp

Why consider SSB a "special case of angle or phase modulation?" You can amplitude limit a phase modulated signal with a clipper and still perfectly retain it's original phase modulation. Clip SSB and the modulation gets more and more distorted until it's gone.

SSB is a special case of amplitude modulation.

Of course, if you don't mind stretching definations beyond the point of silliness, you could also consider double sideband full carrier AM to be another "special case of phase modulation".

Check out the ampliphase!

http://users.rcn.com/jbyrns/Ampliphase.html

Christopher,

Thanks for the note.  No, I definitely mean portable CASSETTE tape
recorders only (and not open reel recorders) made by Telefunken in the
1960s and '70s.

When a spy gets arrested, I'm such they check their electronic gear really really really carefully.

Ana Belen Montes, the Cuban spy, had a shortwave radio to receive numbers stations. They never did say if she was a Sony or Grundig user.
;-)

You still haven't given a reason why a numbers station would hide. Remember, there is nothing suspicious about owning a shortwave radio. Bush #41, so the story goes, used a Sony 7600 (the old version) to listen to the BBC reports regarding Gulf War #1. So if POTUS can have a shortwave radio and not be suspected of being an evil-doer, so could a spy.

Your idea is interesting, but I don't think it would be superior to sideband. Let's ignore the issue of the wasted power in the carrier, and just compare SSB and your inverted polarity DSB. To be fair, there has to be twice as much energy in the SSB as each of the two sidebands individually in the DSB case. So the signal energy is now the same, but the DSB receiver has twice the bandwidth. Noise is proportional to the square root of the bandwidth, so your scheme would have a lower signal to noise ratio.

The inverted sideband AM idea was nothing more than my WAG as to what the Russians might have been doing.  I think we both agree that there's no way it could be some sort of James Bondian secret modulation scheme.

Not haveing all the details about the recorded reception, an inverted sideband was the first thing which came to mind when I read the description of an unknown radio which would receive one transmission in one mode and another in another mode.

The inverted sideband mode would be about as noisy as standard AM, which is normally pretty good -- except in when there's interference such as thunderstorms, ignition noise or maybe even BPL (someday (well, probably never)).  An inverted sideband radio wouldn't supress the normal hissy type noise, but it might do a good job with some of the really nasty stuff which plagues AM broadcasting.  The S/N ratio should be improved over standard AM, if the ratio of power favors the sidebands rather than the carrier.  There's no need for a full carrier, as this mode would be incompatable with standard AM detectors, anyway.  It would be at least be receivable with current selective SSB radios and sync detector radios.

I have no idea if an inverted sideband AM transmission would work well or not.  But it's a simple enough idea.  And it's easy enough to rig up and put up to a real world test .  One of those test might have involved throwing it up against a high power broadcast trasnmitter.

Certainly makes sense as the '7600 didn't come out until 1992, but I guess he 'might' have had one later on.

The Sunday Times - Comment

May 01, 2005
Andrew Sullivan

One by one America's media giants are beginning to teeter. Newspapers are haemorrhaging readers. The networks are reeling from cable television. Network news is staggering towards extinction, as its anchors retire or discredit themselves. Institutions such as The New York Times have been damaged by scandal and bias. The news weeklies are just as likely to run cover stories on health or money than the hard stories of the day.

Now the last powerful, free-at-use medium that America has left is also on the ropes.

I'm talking about radio. In a country where millions spend countless hours in cars or trucks, radio has always been powerful. It has powered America's vibrant music industry; it helped pioneer the conservative politics of the past two decades; publicly funded radio is extremely dear to the blue-state liberals, who trust it as Radio 4 is prized by middle England.

But just as blogs and cable news decimated newspapers and network television, so radio is now in the grip of the next, big, decentralising, narrow-casting revolution.

The reason? Satellite radio - digital-quality programming beamed to receivers from outer space. For a small subscription fee - about �7 a month - Americans can now receive more than 100 stations of limitless, commercial-free radio for any taste.

You buy a tiny receiver, plug it into your car or home stereo, and get news, music, sports, talk in a dizzying variety, bypassing the entire broadcasting network that covered America for the better part of a century.

The growth of satellite radio is faster than any new medium in history. From zero in 2001, the total subscriber list is projected to reach 8m by the end of this year. In the first three months of 2005, XM satellite radio, the biggest of the handful of new companies, added 540,000 new subscribers. Its revenue grew 140% over the previous year. Remember, listeners are paying for something that is essentially already available for free.

Last week, in a sign of the maturity of the new medium, America's domestic goddess Martha Stewart signed on for a 24-hour Martha channel.

The legendary "shock jock" radio host, Howard Stern, recently announced his intention to kiss regular radio goodbye in favour of a five-year $500m (�261m) contract to go to Sirius, the second-ranking satellite service.

Why is this happening? Consolidation in the regular radio market has led to huge companies squeezing more ad revenue and commercial time out of existing formats. And who wants to listen to endless, screechy radio ads on the motorway? But satellite radio is commercial-free. It's also free of censorship in an increasingly puritanical America.
Stern, for example, was regularly fined for indecency by the newly aggressive Republican-led Federal Communications Commission. Radio stars

Opie and Anthony - known for outrageous stunts such as recording sex in churches - couldn't keep paying the government fines their smut brought on them.

Satellite radio gets around political censorship and disciplining. Because it's not on general airwaves, subscribers get what they want, and public decency is preserved.

Satellite radio more accurately caters to contemporary culture. Radio has always been an intimate medium. Broadcasting in an increasingly diverse and fractured culture means reaching a lowest common denominator that renders programmes bland or too commercial or simply too eclectic for increasingly picky listeners. The spectrum of satellite radio expands the choices to a dizzying degree.

You can now have talk radio channels for conservatives, liberals, Hispanics, gays, or new agers. You can have Vatican-approved Catholic radio or WISDOM radio, with Deepak Chopra sending karma to your car.

Interested in English football? On Sirius, you could have listened in Los Angeles or Chicago to the Bolton v Chelsea match or Southampton v Norwich. The entire baseball season is available, along with basketball and American football.

For sale:

(The "Radio Crazy" is baaaaakkkkkk!!!!!) Hi!

Partial ownership in new LPTV station licensed by the FCC to serve incredibly wealthy Rehoboth Beach, DE. If I have to tell you about that area, please do not reply. This ad is for INTELLIGENT folks only, not for the "unwashed"!!

This is a joint venture. This is a joint venture! This is a JOINT venture!!! There is an element of risk and you could lose all or part of your investment. You heard it first here, kiddies.

Active or inactive investors with at least $10,000 each are welcome. All investors would be investing. (Duh?).

Please call anytime at: (478)741-1710. Macon, GA

73,

Meyer Gottesman, W6GIV

By SARAH MCBRIDE, The Wall Street Journal

Radio host Howard Stern, center, poses with a fan as thousands of people line up to receive a free Sirius radio in Union Square in New York in November. The event was held to keep his fans when his show makes the switch to satellite radio.

GREGORY BULL The Associated Press  Kevin Melancon is already mapping out plans for a glorious summer lying on the beach in Southern California -- and listening to music from his favorite European clubs and disc jockeys.

The only obstacle: getting a satellite radio that beams the club music he favors straight to him on the sand at Santa Monica. Confronting a baffling array of receivers and service options on a recent visit to Best Buy, the 37-year-old part-time DJ walked out empty handed.

It is a predicament more people are facing as satellite radio picks up momentum and attempts to expand out of cars, and as manufacturers roll out receivers for listening at home or on the beach. Available since late 2001, satellite radio now has five million listeners; Tom Watts, an analyst at SG Cowen, believes that figure will jump to 24 million in three years.

## Sirius vs. XM

The two rival satellite-radio services, Sirius Satellite Radio Inc. and XM Satellite Radio Holdings Inc., are quickly adding new equipment and features. XM released a portable, Walkman-like unit made by Delphi Inc. called the MyFi. It comes with a built-in Tivo-like device that can store as much as five hours of programming for playback later. Sirius says it plans to start selling its own portable player later this year or early next. It is touting a model, the Sportster, that can hook into a home stereo or a car radio, and like many models, is capable of alerting listeners if a favorite song is playing on another channel.

Both services have also been on a hiring binge that has produced a lineup with some bonafide stars -- as well as some shows that might well be described as having only niche appeal. Sirius has signed personalities including Howard Stern, Martha Stewart and Bill Bradley, the ex-Senator and former New York Knick, to host new shows. This month, XM launched a baseball show hosted by former Baltimore Orioles star Cal Ripken and his brother Billy. Earlier this year it added rapper Snoop Dogg.

Subscribers to either service pay a minimum of $100 for the radio, plus

$12.95 a month for the programming. Each service offers more than 100 channels, catering to every possible niche -- electronic dance music, comedy, radio theater. Most satellite tuners come with a screen that displays the song artist and title, or the name of the news or talk show, so listeners always know what they're hearing.

Aside from having to choose between XM or Sirius (currently, the receivers can pick up signals from only one provider, not both) new customers must decide whether they want service that is beamed to a car, their home or a portable device.

Both companies are trying to beef up their equipment and programming. At the moment XM is the market leader with 3.7 million subscribers; its equipment is generally smaller and less expensive than Sirius's, chiefly because XM's engineering team has developed more sophisticated technology to grab the satellite signal and convert it into sound. Sirius is growing at a faster pace, though from a smaller base. The company quadrupled subscribers last year and now has 1.2 million. XM more than doubled subscribers last year.

In a bid to catch up, Sirius has been particularly aggressive hiring hosts, and also recently stole the Nascar racing franchise from XM, adding to its other sports programming (including all NFL and NBA games) and cementing its lead in sports.

On XM, former public-radio star Bob Edwards hosts a current-affairs program, and singer Tom Petty runs a music show. XM is also the exclusive Major League Baseball satellite broadcaster and will hang on to Nascar until 2007.

Both companies are aggressively pursuing niche broadcast markets: Sirius, for example, recently signed skateboarding champion Tony Hawk to do a show. To the companies, it doesn't matter how many people listen to each individual channel -- what matters is how many people subscribe to their overall service. Another example: classical music, which draws relatively few radio listeners in the U.S., and is losing stations every year on traditional airwaves. However, its fans are fiercely dedicated, and each satellite company offers three classical stations.

Grading the service

There are few resources for comparing the quality of shows on the two systems, although a few Web sites are starting to tackle the issue. The site radio.about.com offers a guide to each service, although some information is out of date. Orbitcast.com has an "XM versus Sirius" link where readers post comments.

There are a number of key differences between the programming each company provides. Generally, Sirius's philosophy is to lock up as much high-profile talent as it can, whereas XM's is to open its pursestrings only for certain big draws like Major League Baseball.

Because the signals come via satellite (as opposed to over the regular airwaves like traditional radio broadcasts) subscribers get the same coverage nationwide: Tune into one station in Maine, and you'll keep receiving it all the way to California. The satellite signal can sometimes be blocked by tall buildings in dense urban areas, although the companies have rolled out special technology that cuts down on the problem.

Occasionally, the services cut out, but typically for no more than a second or two. However, both will lose service in underground parking garages or lengthy tunnels.

While some cars now come with factory-installed satellite radios, new-car buyers don't usually get a choice of satellite-radio providers. The reason: It is difficult for car makers to install both Sirius and XM radios in a car, so instead they enter an agreement with one provider, and offer only its gear as a factory-installed option. For instance, buyers of new cars from General Motors Corp., Honda Motor Co., and starting from this autumn, Hyundai Motor Co., can expect XM radios built into some models. BMW AG and DaimlerChrysler AG, are offering Sirius radios built into some models.

Of course, it is possible to separately purchase and install a satellite radio in most any car. Most auto dealers offer this service for an extra fee, as do electronics retailers like Best Buy and Circuit City.

Prices for basic satellite-radio receivers at electronics retailers can range from $100 for a no-frills model (not including installation costs) to more than $1,000 for models that also include CD players, information screens, and other bells and whistles. Typically, the unit gets installed right in the dashboard -- replacing the current radio. (In-dash units like these also can tune into traditional AM and FM radio stations, too.)

There are also some slightly less costly options, including receivers that don't get permanently installed in the dashboard. Known as "plug & plays," they usually can be plugged into a car, a boombox or a home stereo.

Both companies also are also offering receivers designed to fit into traditional home-stereo shelves and not look out of place. Models including XM's Polk XRT 12 and Sirius's SR-H5550 usually start at about $250. Sometimes they require that an antenna be attached outside of the building. Both companies also have boomboxes, with prices starting around $170.

Consumers who can't decide which service they prefer might want to wait for a radio that can receive signals from either service -- though that will take a while. The Federal Communications Commission required the companies to develop such a receiver years ago, but engineers have run into technical roadblocks. Analysts estimate it won't hit store shelves until next year at the earliest.

The writer seems to think there is some sort of openness to satellite radio; not that it is all under the control of two corporations. Yet, he contends that "consolidation in the radio industry" is what's wrong with terrestrial radio.

He "seems to think." In other words, he didn't say it. You made it up. What Sullivan *did* say about commercial radio is that it is commercial-laden, censored, lowest-common-denominator, and that satellite radio offers its subscribers more varied listening options. And I don't hear you denying it.

Satellite radio's customer is the subscriber, while commercial radio's customer is the advertiser. Satellite radio competes with the internet and hard media as an entertainment and information source. Terrestrial commercial radio competes with billboards as a purchase-influencing spin-for-hire medium.

Even with just one source for broadband, I can use Time Warner to criticize Time Warner, but I can't use terrestrial radio to criticize terrestrial radio. So anybody who fixates on a medium's ownership entities rather than the choices it offers will be frustrated by the facts in evidence. Sullivan didn't do this; he is a prominent libertarian-conservative. You did, and attempted to put the words in his mouth.

Jerome

The Summer 2005 (A05) edition of Broadcasts in English is now available from the British DX Club. It was compiled by Dave Kenny and includes details of all currently known international broadcasts in English on shortwave and mediumwave for the A05 schedule period. The 32-page booklet is in time order throughout and covers all target areas. Transmitter sites are given where known. It also includes a comprehensive guide to DX and Media Programmes; schedules for Digital Radio Mondiale (DRM) transmissions and World Radio Network in English to Europe.

Copies are available at the following prices (postage included):

United Kingdom - 2 pounds sterling
Overseas - 6 International Reply Coupons; 5 Euros or 5 US Dollars

Sterling payments by cheque/postal order to "British DX Club"
Dollar or Euro payments in cash.
We can now accept payment via Paypal - please email for details.
secretary@bdxc.org.uk

All orders/enquiries to:
British DX Club, 126 Bargery Road, Catford, London SE6 2LR, UK

Or visit the BDXC-UK web site at http://www.bdxc.org.uk

Actually, I was trying to look beyond his proselytizing. I used his own
phrase as a reference point.

If you think ownership doesn't matter, well... dream on, silly dreamer.

Did he *work* for WCLV, or was he just syndicated by Radio Seaway Inc.? (RSI
used to own WCLV. The station has since been transferred to a local nonprofit
that also owns WCPN, the local NPR station. I don't know whether the
distribution division still exists.)

They suppress them very significantly.  You are probably in a position where you have (depending on the antenna of course) very high signal levels, and if you have a long wire or similar, you might have just a touch of corrosion somewhere that is causing the problem. (Along with front end overload..)

Amazing what a volt of signal will do to the front end of a radio designed for a millionth of that will do...

Have the same problem with WBT here in Charlotte.  Move out of the main lobe, and all is well, stay in the peak signal area, and get WBT everywhere.  The cable TV ends up with WBT in almost all their local analog signals.. Of course, there it looks like stripes of noise..  (Diagonal banding.)

I grew up listening to Karl Haas on WJR in the 1960s.  When I started
listening again recently via the WCLV OggVorbis stream, I was amazed at
how little his program had changed over 40 years!  Except for his
featuring the occasional post-1975 musical work, you'd never know it
wasn't 1965, and you'd never miss knowing.

"Adventures in Good Music" is truly an evergreen program;  I hope it
never leaves the air.

Does anyone know whether WCLV's archives also include Haas' WJR programs?
It would be fun to hear some of them now.

47CFR73.44:
"... Emissions removed by more than 75 kHz (from the station's carrier)
must be attenuated by at least 43 + 10 Log (Power in watts) or 80 dB
below the unmodulated carrier level, whichever is the lesser
attenuation,..."  (followed by an exemption for powers of less than 158
watts)

In WOR's case the formula would yield an attenuation of 90 dB so the
80dB figure would apply.

Are you certain the harmonic isn't being generated locally?  (possibly
even in your receiver)

Hi folks...I've been going through my collection and I see I need a few new dubs of WABC PAMS jingles that I either lost along the way or don't that don't play very well on my reel-to reel machine anymore.  The few things I need are fairly rare, so I was wondering if there's anyone out there, that has an extensive WABC PAMS jingle collection and would be willing to burn a CD for me.  I don't have alot to trade with but I would compenste you for your time and mailing expenses.

I believe this quote from the rules should help:

(b) Emissions 10.2 kHz to 20 kHz removed
from the carrier must be attenuated
at least 25 dB below the
unmodulated carrier level, emissions 20
kHz to 30 kHz removed from the carrier
must be attenuated at least 35 dB
below the unmodulated carrier level,
emissions 30 kHz to 60 kHz removed
from the carrier must be attenuated at
least [5 + 1 dB/kHz] below the
unmodulated carrier level, and emissions
between 60 kHz and 75 kHz of the
carrier frequency must be attenuated
at least 65 dB below the unmodulated
carrier level. Emissions removed by
more than 75 kHz must be attenuated
at least 43 + 10 Log (Power in watts) or
80 dB below the unmodulated carrier
level, whichever is the lesser attenuation,
except for transmitters having
power less than 158 watts, where the attenuation
must be at least 65 dB below
carrier level.

The above is from section 73.44 of the 1-98 edition of the FCC rules.  I
doubt they have changed since then.

Charlie

Are you sure that the harmonic is not being produced in your receiver?
Some sort of non-amplifying preselector will confirm.
Ian.

"Receiving them loudly" is rather vague.  How many watts are they transmitting?  What kind of antenna pattern?  They are probably operating within specs but overloading the front end of your radio. Have you tried a tuned trap at 710 KHz?  Its simple to build one from a junk AM radio. Remove the ground connection from the antenna coil, add a couple antenna connectors with the center pins connected together. Connect the antenna coil wire you removed from the ground connection to one of the antenna connector's center pins.  Ground the shells of both antenna connectors to the spot where you disconnected the antenna coil. Tune the radio to 710 KHz and tune for minimum signal.  No you have a deep notch at 710 KHz and you won't have to worry about overloading the front end with WOR's signal.

Almost certainly it's the radio overloading on 710 and itself producing the
harmonic
you hear.

Test it some miles away and it should stop, unlike an actual radiated harmonic.

I assume you've checked out the jingles section of Allan Sniffen's WABC tribute web site:

http://www.musicradio77.com

There's a pretty extensive collection in there.

I've just recently begun reading about the history of radio, particularly amateur radio-- mostly web articles so far--and I've noticed some conflicting dates for Frank Conrad's broadcasts.  Did he begin them in 1916, then continue them after the war?  I've read on two different sites that he first directed his microphone to the phonograph in autumn 1919.  Even in a single letter posted in a column, someone states at the beginning of the letter that Mr. Conrad began broadcasting in 1916, then later in the letter states he began in 1919. I was wondering which was correct.  I'm also curious about radios themselves in 1919-1920.  From what I've read, people were still using primarily headsets (or exclusively headsets?) to listen in; I couldn't pinpoint just when it was that speakers were first in use.  Was that after the first sales of sets to the general public? I was wondering if the hams were using headphones or speakers. Actually I'm wondering quite a lot of things, since I'm still in the beginning of reading about all this. :)  I love the earlyradiohistory.us site and wish it had more to it. Can anyone direct me to any sites that have more historical information with more detail, such as particular dates when speakers came into use and how these early sets were put together and how they worked (I've read a little general information about that but my mind hasn't wrapped around all the tech jargon just yet...frequencies and oscillators and vacuum tubes and couplings and all. Science isn't my strong subject. I could use a site or book that explains it on the level of a ten year old; that I could probably understand <g>).  I've also been looking for sites with personal stories of early radio but haven't found any that go quite back to 1919. :)  Thanks for any information anyone can offer. I really do appreciate it.

You might want to email WCLV... I have no clue. :) (Or email WJR and see if they have them??)

Anyone know anything about KATL?

I don't think this station exists anymore does it?

I've got someone's card: King H. Robinson - General Manager.  Seems that in the 1940's (year of this card I think) the station was located in State National Bulding. TIA.

I did a search on Google, and there is a "State National Building" in Houston, Texas, and in the 1940s there was a radio station there with call letters KATL. I couldn't find any information about what call letters the Houston station known as KATL has now (those letters are currently used by a station in Miles City, Montana), or if the station even exists anymore.

Here's a Rockabilly history page that mentions KATL and Houston in the 40s:

http://www.rockabillyhall.com/SRAB.html

and here's a picture of the State National Building in Houston:

http://www.houstonarchitecture.info/ShowBuilding.php?ID=208

Hope this helps!

- Merle

I don't understand this site:

http://www.katlradio.com/

Does not look like a proper radio website! to me :c)

I thought KATL was a Texas station originally.

           I've been trying to figure this out for quite a while too. The
```

KATL that's in Miles City MT was originally known as KRJF. In the early to middle '60's...for some reason that I don't know....all of a sudden they became KATL...same owners...same broadcast facility...same frequency. The owners of KRJF/KATL at that time had the last name of either Scanlan or Scanlon...I'm not sure of the spelling. They owned the local newspaper here too. I remember all this happening...I was a kid then...but I don't ever remember hearing the reason for the sudden change. Of course just being a kid, I really didn't care why back then either. Years later when I became curious about it, there was nobody here could remember the reason for change. KATL here even stayed on the original KRJF freq of 1340 until about 10 years ago when they changed to what they're on today...770. I do remember the reason for the freq change...it had something to do with the upgrade of transmitting power from 5,000 to 10,000 watts. If anyone knows anything about this...I'd like to know too. The only thing that I could figure out on this so far is that the call sign of KRJF is still not being used anymore by anyone else.

Ben

According to White's Radio Log, in 1951 KATL was operating in Houston, Texas on 1590 kc at 5000 watts. Then, White's Radio Log in 1973 shows KYOK in Houston on 1590 kHz at 5000 watts. According to the FCC website KYOK became KMIC in 1999, and is now a Disney station.

Pat Chamburs, the 80 year old host of the Jaaz and Jive - Pat Chamburs show on WMNF 88.5 is retiring.  He previously worked at WFLA starting in the 1950's WDAE and I believe WABA/WYNG.  His radio station is hosintg party for him and I am collecting stories. If you have some fond or funny memories of Pat Chamburs while at WMNF or at any of the other radio stations he worked at (WFLA, WDAE, WYNG-WABA) please add them as comments at my blog. For more details see
http://seminoleheights.blogspot.com/2005/04/stories-about-pat-chamburs.html

Thanks,

Radio 2 in Australia Dishes up a Winner

At Last

Movement at the Station... Good on ya Andrew, Lee and all at 2

Sure Youre Not Radio 1 ?

Look out NOVA

Keith

A New website as well for Radio 2

http://www.radio2.com.au/

And Now if youre an Aussie Overseas in from Bali to Bahrain,In Shanghai

or Singaporem New Delhi to New Guinea at Last Radio Australia has some competition.

Its sure to be a lot more popular than what the ABC/Radio Australia dishes up

Radio 2 is the only national commercial digital broadcaster on the digital audio channel of the Austar [channel 2] and Foxtel [channel 831] subscription TV platforms and is also the only Australian commercial radio broadcaster to transmit on the WorldSpace Asia digital

satellite platform into South East Asia and Northern Australia
including Darwin.

With a WorldSpace Receiver for instance our Troops in IRAQ
Can hear Radio 2  24/7

Theres a new nz radio Google group at
http://groups-beta.google.com/group/NZNew-ZealandkiwiRadiobroadcasting

What Im trying to do is find out some of the people I worked with a long time ago when Broadcasting in New Zealand went through some radical changes. Some would say that was good and some bad

If any one knows of Where They are Now ?, I Would appreciate News of them on the Thread at

http://groups-beta.google.com/group/NZNew-ZealandkiwiRadiobroadcasting

They're there even with the pre-amp off.  I do think it might be a front end overload problem.

I think a guess would be in order. KATL is much more memorable than the
other calls. Many stations change calls to ones that are more
promotion-friendly. They do nave cattle ranches in Montana, right? Makes
perfect sense.

Just as the Houston station was sold to the operator of Black stations, who had "OK" in many of his call letter combinations. KATL was not a good Black call, compared to the "OK" moniker.

April 11, 2005

XM Satellite Radio and America Online are teaming up to launch a co-branded radio service over the Web beginning this summer, the companies plan to announce today.

A basic service will offer a free sampling of 20 XM stations and 130 AOL Radio stations.

An expanded service, free to AOL subscribers and available to others for a fee, will provide access to 70 XM stations and more than 130 AOL and third-party radio services. Included among these will be some of AOL's live Internet concerts and music debuts. The XM programming will include programs such as "Artist Confidential" and "Then . . . Again . . . Live!"

Dulles-based AOL is the nation's biggest Internet service, with 29 million subscribers. District-based XM is the biggest satellite radio service, with 3.8 million subscribers.

For sale:

(The "Radio Crazy" is baaakkkkk!!!) Hi!

Partial interest in new LPTV station to serve fantastic and wealthy Rehoboth Beach, Delaware. Channel 59, 20,000 watts ERP, 24 hour license. Can go HD digital.

Rehoboth Beach for the "unwashed" is possibly the richest city in America for a community with a Winter population of under 5,000. The Winter population (2000 census)is 1495. They get about 2.7 million visitors per year!

This is a joint venture. There is an element of risk and you could lose all or part of your investment. You heard it first here, kiddies!

Active or inactive investors with at least $10,000 each are welcome.

Please call anytime (478)741-1710 in Macon, GA.

73,

Meyer Gottesman, W6GIV

Studioline was a syndicator out of Reston, VA, which was run by
Jay Taylor and John Humphries.  They were one of the first folks
doing direct broadcast satellite radio as well.  I have no idea
what happened to them.

# Frequently Asked Questions (FAQ) File for OTR (Old-Time Radio)

Copies of this FAQ are distributed to rec.answers, rec.radio.info, rec.radio.broadcasting, rec.antiques.radio+phono and other news groups; and are on file at bloom-picayune.mit.edu in the file:
/pub/usenet-by-group/news.answers/radio/old-time-faq   or
http://www.faqs.org/faqs/
The most recent HTML-ized version is at http://www.old-time.com/otrfaq.html

What is "OTR"?

You haven't mentioned OTR music, why not?

Where can I buy recordings of old radio shows?

Which vendors have (lower prices) (higher quality) (faster response)?

Are OTR shows rebroadcast? If so, where and when?

I remember a great show called (x). When was it aired?

Are there any books about OTR?

Does anybody trade tapes of OTR shows?

What's this stuff about Copyright?

How can I get my local radio or TV station to broadcast OTR programming?

I have some old transcriptions and tapes, how can I make them sound better?

Are there any OTR clubs near me?

I have some OTR tapes or CDs of the same program, but their dates are different. Why?

Is there any place where I can get a complete listing of all the episodes in a particular program series?

Is there any place where I can get a written synopsis of the plots or themes of OTR programs?

Is there a World Wide Web page (URL) that I can access for more information?

Is there an email newsletter on OTR? How do I subscribe to it?

What ever happened to the person that played [insert character] on [insert name of show]?

What is the best way to archive OTR programs?

My old reels squeak. Why does this happen, and can I fix it?

What is the best radio / antenna to get distant OTR stations?

Is there a group for modern radio drama ("new-time radio")?

I am interested in re-creating some OTR drama. Where can I get scripts?

I can hear what sounds like another program playing in the background on many of my OTR tapes. Is this due to the tuning on the old radio or to the tape recorder that recorded the program?

Is there an internet news group for old time radio?

OTR network shows were usually heard at the same local time, no matter what the time zone. How did they do this?

I'd like all the information there is about [insert name of OTR show]. Is there a FAQ that covers all the shows ever on the radio?

Is there any information on OTR conventions?

Are there any WWW Bulletin Boards where I can post OTR questions and read OTR information?

I would like to find recordings of [fill in rare OTR show name]. I have seen the show mentioned in Jay Hickerson's book, but haven't seen the show in any of the paper or on-line catalogs. How do I get this show?

I see a lot of OTR MP3s on the WWW. Are these worth collecting? How about the OTR CD-ROMs being offered on the WWW, are they worth the money?

Were any of the old-time radio personalities interviewed recently?  Where can I find these interviews?

What MP3 player is best for OTR?

I keep reading/hearing about the LOC hoarding a bunch of unreleased OTR episodes. Is this true? How can I get them?

Where can I find OTR to download?

I bought some CDs with OTR MP3s. Some of the programs sound pretty bad. Why is this, and how can I make them sound better? If I make an audio CD from the MP3s, will it be better?

MP3s have lots of different numbers, like 32/22 or 64/44.  What do they mean?

## 1. What is "OTR"?

OTR is an acronym for "Old Time Radio", a term loosely applied to radio programs broadcast from the dawn of broadcasting to the very early 1960s. Alternate names are "radio nostalgia", "golden age radio", etc. Usually this applies to radio drama, mystery stories, comedy and adventures. Some individuals classify the resurgence of this type of radio programming in the '60s and '70s as "Revival Radio", and similar programming since the '70s as "Modern Radio Drama". Purists even discriminate between the "Golden Age" (late '30s and the decade of the '40s) and the "Silver Age" ('50s). In any case, there are plenty of programs of various types that are enjoyable entertainment. Best of all, they don't require a large screen TV to enjoy 'em -- the "visuals" are provided by the listener's imagination.

## 2. You haven't mentioned OTR music, why not?

There was a good deal of big band, bluegrass, country and other music broadcast during this era. For some reason, there seems to be more current interest in the dramas rather than in the music. You will find much more discussion about this topic in alt.music.big-band or the various news groups specializing in music of various types. Bluegrass fans might enjoy the Old Time Music on the Radio WWW pages. (They happen to use the same acronym, "OTR", but are not affiliated with The Original Old-Time Radio (OTR) pages). In addition, there is a Big Band and Other OTR Music BBS at www.old-time.com/otrbbss.html

3. Where can I buy recordings of old radio shows?

There are several individuals and companies willing to sell tapes and CDs of OTR programs. A partial list can be obtained from the www.old-time.com site. Many public libraries have a small stock for perusal as well. Some vendors and collectors even have their own WWW pages.

4. Which vendors have (lower prices) (higher quality) (faster response)?

Prices, quality and service differ somewhat among all vendors. Check with other OTR fans to learn of their experiences, then check with potential vendors. Audio quality is an important consideration when purchasing recorded tapes. As yet, there is no "standardized" description of sound quality. Jim Widner and other OTR collectors have suggested various metrics to describe the quality of OTR recordings. Discussion of these standardized descriptors is summarized at the www.old-time.com site

5. Are OTR shows rebroadcast? If so, where and when?

Yes, several AM and FM radio stations, satellite feeds, a shortwave station, and at least one Public Access TV station rebroadcast OTR. Check the Old-Time WWW page for current info. If you learn of other sources, leave a note!
For AM listening, try the National Radio Club's AM Radio Log, 17th Edition: Complete Listing of U.S. and Canada AM Radio Stations (Mannsville, N.Y.: NRC, 1997). All AM stations carrying things like "Old Time Radio" are listed with the format code NOS (Nostalgia), and there are lots of other codes. [Order from NRC Publications, Box 164, Mannsville NY 13661-0164 USA. Price is: $22.95 post paid]
For FM listening, try Bruce F. Elving's FM Atlas (Esko, MN: FM Atlas Pub., 1993). Alongside lists, this has maps of your area and its stations as well. [Order from Bruce Elving, PO Box 336, Esko MN 55733-0336. Price Range: $11.00 + approx. $1.00 s/h]

The M Street Radio Directory, M Street at +1 615-251-1525 voice, or +1 615-251-8798 FAX. The address is M Street Corp., PO Box 23150 Nashville, TN 37202 The price for the 8th edition is $65.00 plus S/H

6. I remember a great show called (x). When was it aired?

If the show was heard nationwide, look through the program databases / logs at the Old-Time site or at Jerry Haendiges' site (see answer A14 below). If the show was only on local radio, you will have more difficulty in finding an answer. Checking with your local radio stations is probably the best bet. Go to top

7. Are there any books about OTR?

Yes, there are many books related to OTR. See the www.old-time.com site for a bibliography of several hundred books. There is also a page where you can read or enter critiques or reviews of various books on OTR.
Jim Widner and Everett L. Slosman left this address for a bookstore specializing in OTR books:

Rainy Day Books P.O. Box 775, Rt. 119 Fitzwilliam, NH 03447 (603)585-3448
Bob Crump reminded us that most good used book stores will do a nationwide search for a title, if given enough time. Henry Brugsch related a good experience with the following on-line bookstore:
Acorn Books acornbks@netcom.com

There are also several "book finding" services that will help obtain old/out of print books for a fee.

8. Does anybody trade tapes of OTR shows?

Yes. Check with the various on-line OTR services. Leave a note in the OTR Digest or alt.radio.oldtime. Remember to observe copyright laws!

9. What's this stuff about Copyright?

The copyrights on some OTR shows have expired. Several copyrights have been renewed, and some may have fallen under "common law" copyright (even though they were not originally copyrighted). 1970s era Berne Convention agreements further cloud the issue for non-lawyers. See the Old-Time WWW site for the latest "common sense" and legal citations.

A concise answer was given by 'A. Joseph Ross' (lawyer@world.std.com) (used with his permission):

> Just to get a little perspective in this controversy, copyrights do expire. Under the old copyright law, a copyright was good for 28 years from the date of first publication, renewable for another 28 years, for a total of 56. Under the 1976 act, those copyrights were extended to 75 years, provided they were renewed. Copyrights under the new law, which took effect on 1 January 1978, are good for the life of the author plus 50 years. Copyrights on anonymous works, works made for hire, etc. are good for 75 years after first publication.

> So, since otr has just barely been around for 75 years, little or none of it is in the public domain yet by reason of having been around for a long time. The question of what constitutes publication, and the fact that sound recordings could not be independently copyrighted until the new law took effect add additional complications.

10. How can I get my local radio or TV station to broadcast OTR programming?

Call the station and tell them of the many people who like to listen to OTR. Suggest this programming will increase the number of listeners and help buy things from their advertisers.

Shawn Fulper-Smith, a managing director of a non-commercial station, tells us:

> The days of radio being ruled by the artisans is over, and for some time now it has been in the hands of people who only look at the bottom line, so to reach them you must talk through public radio pledges, or through sponsors on commercial stations.

Don Fisher has been successful in getting his local Public Access TV station to rebroadcast OTR. In fact, Don is the MC of the program. Contact him for hints on how to get your Public Access TV station to do something similar.

Elizabeth McLeod, who has spent more than 15 years working in local radio, gave the following advice:

> I can tell you that one phone call from a listener means absolutely nothing to a program director. PD's are totally under the thumbs of their General Managers -- and GMs, in turn, base their decisions EXCLUSIVELY on sales issues. It doesn't matter how many people want to hear something -- if the GM doesn't think he can sell it, if the GM doesn't think it'll bring hard cash into the station, it won't get on the air. Period.
>
> The only reason a commercial station exists is to make money for its owners. ALL decisions at the station, be they about programming or anything else, are made with this in mind.
> Don't bother to approach the station itself, APPROACH THE STATION'S ADVERTISERS!!!
>
> Listen to the station and figure out who its biggest sponsors are. Generally, they'll be local banks, car dealers, insurance agencies, and appliance retailers. Do you know anyone connected with these advertisers? Then approach these people. Tell them you've heard their ads on such and such a station, and that you think a lot of people would be interested in hearing OTR, and that advertising on an OTR series might be a good strategy. And get your friends to do the same. And be persistent! In other words, SELL THEM ON THE IDEA!
>
> You need to keep in mind that some types of stations are more likely to air OTR than others. If your local station is has a firmly-defined format, you are probably "S-O-L," as the saying goes. They won't break

format, no matter what. On the other hand, if you have a local non-commercial community-type station, way up on the left side of the FM dial, you may have a very good chance of success.

11. I have some old transcriptions and tapes, how can I make them sound better?

You might try using a good equalizer and/or digital signal processing (DSP) unit between the playback and recording devices. Some people have mentioned that the Radio Shack DSP unit does a fair job. There are also other, more expensive DSP units available from Ham radio stores and audio stores. Some subscribers have attested to the efficacy of the Timewave brand of DSP units.

There are several computer programs available to convert analog sounds (as on a tape) to a digital format (e.g. WAV file). Some of these computer programs also have noise reduction, filtering and enhancement capabilities. In many cases, application of digital technology will improve the sound of a noisy or deteriorating analog tape. There is a problem, however, if the digitized rendition is re-recorded to tape, and subsequently re-digitized for further treatment. Since digitization is a sampling technique, sampling a sample can result in extremely degraded sound patterns.

A very nice program that will convert analog material to digital format is Audiotools by Andrew Fish. For more information on this software, visit Andrew's site at http://www.unrelatedinventions.com/Audiotools/

From: hhoward@mindspring.com (Henry Howard)

For cassette machines (and reel to reels for that matter) occasionally take a "Y" cord and connect the output of your cassette player to both "sides" of the "Y". Plug the combined side of the "Y" into your stereo. If the sound is mush(ier) than what you hear normally, you have a head alignment problem (assuming that the tape you are listening to was properly aligned.)

From: Ron_B._Hare@livewire.com (Ron B. Hare)

Dolby HX on the recording deck makes an audible difference. Other audio optimization features are of negligible value for OTR. Dolby HX also requires no playback decoder.

[Dolby HX uses or "preserves" the Dolby noise reduction method of the master tape when duplicating - ed.]

12. Are there any OTR clubs near me?

Check the club listings in the Old-Time WWW page, and leave a note in one of the on-line OTR groups asking about local clubs for your area. If you find a club that is not listed at www.old-time.com, ask a club officer to send a note to the webmaster with particulars about the club.

13. I have some OTR tapes or CDs of the same program, but their dates are different. Why?

Sometimes broadcasts are dated according to their original broadcast date, and sometimes according to a date on which they have been rebroadcast. For instance, the Armed Forces Radio Service rebroadcast many Mutual Radio transcriptions at a later date. Your tape may be of one of these later dates. Alternately, somebody might have made a mis-typopgoof.

Finally, some shows -were- broadcast more than once, and sometimes on different programs! For instance, a few Suspense shows were re-scripted / re-cast for Escape. You might also find similarities between certain SF shows as done on X Minus 1 and Dimension X.

14. Is there any place where I can get a complete listing of all the episodes in a particular program series?

Some on-line OTR collectors have contributed Program Logs for several well-known series. The logs are available at www.old-time.com/otrlogs/ . While you are logged in at that site, check the "Humongous OTR Database" (a database of contributed catalogs and libraries), which is searchable with your WWW browser. The "logs and publications" entry at the Old-Time WWW site gives names and addresses of several vendors of these items (thanks to RadioJoe5@aol.com (Joe Coleman) and others).

Jerry Haendiges maintains a VERY complete set of OTR program logs, at his Vintage Radio Place: http://www.otrsite.com/radiolog

Jay Hickerson maintains several logs and lists, as well as -Hello Again-, an OTR newsletter. Jay is the author of The Ultimate History of Network Radio Programming and Guide to All Circulating Shows. You can see more info at http://www.old-time.com/sponsors/hickerson.html
Jay's address is:
Jay Hickerson JayHick@aol.com Box 4321 Hamden, CT 06514 (203) 248-2887 FAX (203) 281-1322

15. Is there any place where I can get a written synopsis of the plots or themes of OTR programs?

Again, some vendors include this information with their catalogs. If you would like to contribute your interpretations of OTR plots or themes, send them to the on-line OTR services or to webmaster@old-time.com for inclusion in one of the databases.

Jim Widner and others have contributed some synopses / introductions to various programs. They are on file at http://www.otr.com and http://www.old-time.com. Also check Frank Passage's logs at the old-time WWW site; most contain a short synopsis of the program.

Many of Jerry Haendiges' logs contain excellent summaries of not only the program series, but of each episode as well.
Many of the local and national OTR clubs maintain informational libraries with this material.

16. Is there a World Wide Web page (URL) that I can access for more information?

Yes, there are several WWW sites. Each site contains different information, so you might want to visit them all. The major OTR WWW sites all have links or pointers to each other, so you can explore many topical areas within old time radio. Good places to start exploring are: www.old-time.com or www.otr.com or www.otrsite.com

An excellent database of OTR-related WWW sites, with an explanation of the contents of each is at www.otr.com

17. Is there an email newsletter on OTR? How do I subscribe to it?

Several newsletters currently exist. Here his how to get the best:
The Old-Time Radio Digest (AKA "Internet OTR Digest") is a very popular and freely available electronic newsletter, delivered nightly. Its purpose is to foster general discussions about the hobby of collecting, preserving and listening to OTR. To subscribe, send an email

> TO: old.time.radio-request@oldradio.net SUBJECT: subscribe (The body of the message is ignored)

18. What ever happened to the person that played [insert character] on [insert name of show]?

Check the "Personality Pages" at www.old-time.com for home pages of several well-known OTR personalities. Also check the Where Are They Now pages at www.440int.com.

19. What is the best way to archive OTR programs?

The most popular way seemed to be reel-reel tapes, using each of the four tracks to record monophonically. Modern reel machines are in the > $2,000 range, and used open reel machines are becoming harder to find.

Purists claim open reel tapes are best stored "tails out", in which the tape is played (not fast-forwarded) onto the take-up reel. This method of storage makes "print through" of the magnetic sound image a little less noticeable because the "echo" will come before the louder sound that caused it, and be somewhat masked by the louder sound.

Cassettes are generally fine for portability / ease of use / exchange, but they suffer from several problems when used as a long-term storage medium. These problems include "overwinding" and splitting of the tape at the leader. Because of their thinner track width and slower speed (1 7/8 IPS), the density of the information is greater than with wider and faster (3 3/4 IPS or 7 1/2 IPS) reel tapes. This leads to a greater loss of signal (particularly high frequencies) over time.

The Hi-Fi VHS tape is gaining in popularity because of its six-hour storage capability and relatively robust mechanical construction. "Hi-Fi" decks need no video signal to synch the systems, and can thus record audio without an accompanying video signal. One T-120 Stereo Hi-Fi VHS cassette can easily hold 12 hours of OTR audio (recorded monophonically on the right and left channels independently). If the linear track can be accessed independently, this will add six more hours of recording time. There is very little fidelity loss when using this medium to duplicate programs.
Conrad Trautmann left this note in response to a query about finding used reel-reel machines:

> You can also call Harris/Allied used equipment division at 1-800-622-0022 or call Radio World magazine at 703-998-7600 for subscription information. Radio World is an industry trade and has used equipment listings in the classifieds once a month.

(Jim Blackie indicates that the Harris/Allied number has changed to: 1-800-300-0733.)
From: andy@vintagebroadcasts.com (Andy Blatt)

> I wholeheartedly recommend Play It Again, Sam of Lakewood, Ohio. They also sell used Pioneer reel decks with a warranty and accept major credit cards for repair or used machines. The address is 12611 Madison Avenue in Lakewood, Ohio 44107. The phone number (no answering machine, no fax machine) is 216-228-7330. As far as pitch control cassette decks, Marantz offers several one of which is the three-head portable PMD-430.

[Play It Again Sam has a WWW page at www.playitagainsam.com - ed]

Richard Novak wrote this informative note on using Hi-Fi VHS as an archival medium:

> To clear up any misunderstandings concerning VHS HiFi machines and their ability to record audio, I offer the following..
> It should be understood that what distinguishes a HiFi machine from a linear machine is that the audio track is recorded helically (diagonally) on the tape along with the video track. On linear machines the audio is recorded at the upper edge of the tape (and a control track at the lower edge, if anyone wonders what the extra head is for.)
> On a HiFi VHS the audio is not recorded as an analog signal as would be the case with linear recording. Instead the analog audio signal frequency-modulates a carrier which is then recorded between the video tracks. A duplicate signal is also recorded linearly to maintain compatibility with linear VCRs. The FM signal recorded on the HiFi track should not be confused with FM radio broadcasts. One of my customers thought the FM switch on his HiFi was for recording FM from the radio. Today's machines no longer use the label "FM", instead use "HiFi". Less confusing.
> The sound recorded from FM radio broadcasts (or any other source) onto

HiFi VCRs is virtually indistinguishable from the source. The material can be dubbed to cassette with no generation loss.
There is no difference in audio quality using either six hour or two hour mode.
It is true that at slower speeds the diagonal tracks are closer together. This does degrade the video signal as anyone knows who has compared six hour video with two hour video. But does not degrade the FM carrier with the audio track.
The tape writing speed of the audio track in HiFi mode is the same regardless of linear speed. This is because the head speed remains constant and is independent of the linear tape speed.
Worked it out once and it is around seven meters per second. Whatever it is, it's a whole bunch faster than 7 1/2 inches per second. If anyone really wants to know the writing speed, it is the circumference of the upper cylinder (or video head) multiplied by the rotational speed which is 30 revolutions per second, or 1800 revolutions per minute. (Two heads 180 degrees apart at thirty rps results in 60 frames per second.)
Who cares how it works.. The point is that VHS HiFi is the best and cheapest medium around for recording masters. But not for archiving. Most experts still agree that reel to reel is the best and most reliable method of archiving. (Sticky shed syndrome from the 70s notwithstanding.)

Although Bob Burnham does not like dubbing (two-well) cassette decks for producing highest-quality cassette tapes, he does have a few recommendations:

One of the BEST dubbing decks (if you must use one) is made by Denon. Both sides can record at the same time and both sides have pitch control, and both sides have separate output jacks for connecting to other equipment.... almost like TWO (click) TWO (click) TWO DECKS in one. Tascam (Teac's pro division) also recently introduced their model 303 double deck. If it's anything like the 202 MKII, it's probably not worth it. You pay a high price for the name, but still basically consumer grade inside and lots of plastic. Denon is better.
I mentioned Kingdom Tapes in Mansfield, PA as a good source for cassette copiers, and equipment servicing. All the duplicators I have in use today came from this company. They have all the major brands (plus their own house brand), also tape decks, blank cassettes, etc. Great service (same day usually available). They'll beat anyone's price on cassette dubbers. 800-788-1122. Fax is 717-662-3875.

Several hobbyists are now investigating the utility of using CD-ROM or MiniDisks for archival purposes. CD-ROMs can hold hundreds of hours of program material, but at the cost of time-consuming conversion from analog to digital representations. Selection of appropriate encoding and compression technologies is extremely important to prevent digital artifacts. MP3 (MPEG III) compression seems to be more favored than is RealAudio(R) compression.

## 20. My old reels squeak. Why does this happen, and can I fix it?

There are at least two causes for "squeaky reels" on a reel-reel tape recorder.

(1) The tape edge may be rubbing against the rim of a distorted take-up reel, or (2) the oxide may be sticking to your erase (or other) heads. If the former, the least frustrating alternative is probably a new take-up reel. If the latter, Fred Korb left this note:

> If you have any squeaky reels that you would like to recover, I will be glad to send you more information on how to do it. Just send me a stamped self addressed # 10 envelope and I will respond. Send your request to: Fred Korb, c/o Oldtime Radio Collectors and Traders Society, 725 Cardigan Court, Naperville, Illinois 60565-1202. I am willing to help you preserve the sounds of radio days gone by.

[Editor's note: Fred's method consists of a kit by which a lubricating film can be automatically applied to the tape as it is played. I tried it. Although temporary, it does indeed work! I'd recommend it for those squeaky tapes that you wish to re-record onto newer reels.]
Richard Fish (lodeston@bluemarble.net) also left this helpful info about an alternative method:

> HYRDROLYZATION is the culprit. The tape material -- the backing, or the binder compound used to stick the magnetic particles to the plastic backing -- has absorbed water from the air. The water molecules actually make the tape expand a bit, so it doesn't fit the machined tape-guides properly anymore; and they can interfere with the lubrication impregnated into the tape; and it is theorized they can even interfere with the polished smoothness of the tape surface.
>
> WHY SOME TAPES AND NOT OTHERS? It depends on the formulation of the plastic backing and binder. In the mid-70s, both 3M (Scotch) and Ampex, the two major tape manufacturers, started experimenting with their formulas. They thought they were introducing major improvements, but instead created a tape much more prone to hydrolization than anything had ever been. The problem did not show up for years, and the formulas did not get corrected until sometime in the mid-'80s. Theoretically any tape could get hydrolyzed over a long period of time, especially if stored in a high-humidity situation, but in practice most squeaky tapes were made (roughly speaking) between 1975 and 1985.
>
> WHAT'S THE FIX? Tom Lopez at ZBS (the most prolific and entreprenurially successful producer of radio drama in the US today) gave me his formula and I've done it many times now and it works:
> Bake the tapes in a convection oven for 8 hours at 130 degrees Fahrenheit. It is entirely possible to bake a tape twice if the first time doesn't do the trick. You get about a three-week "window", sez Tom, before the tape starts to re-absorb water. So the best deal is to bake the tape and immediately make a copy. But if you forget to do it and it re-hydrolyzes, you can bake it again.

21. What is the best radio / antenna to get distant OTR stations?

Several readers have been acclaiming the GE SuperRadio III as an excellent choice for picking up distant AM stations that carry OTR programming. Although the tuning dial has notoriously poor calibration, the sensitivity and selectivity seem superior to other radios.

Some readers have had good success with the Select-A-Tenna antenna advertised in several magazines, and the Grove Catalog. The S-A-T seems to be rather directional, and may eliminate off-axis interference.

Ham Radio magazines sometimes carry information about small loop antennas for AM DX-ing. Some pointers to instructions on how to build them are at http://www.old-time.com. Also, Dan Hughes (dan@soltec.net) left this note:

> Several years ago one of the electronic magazines ran plans with dimensions and number of turns, etc to build one of these antennas. I have built several and I'm no mechanic. If you (or anyone else reading this) would like a copy of the article and plans, visit my website at http://members.soltec.net/~dan

If you are interested in AM Broadcast Band reception, and technical articles related thereto, send a SASE to the following address for their product catalog:

National Radio Club Publications Center PO Box 164 Mannsville, NY 13667-0164

(The National Radio Club also has a WWW page, at www.nrcdxas.org/)

22. Is there a group for modern radio drama ("new-time radio")?

There are several USENET groups whose charters include modern drama. Check the lists on your local Internet provider to see which are available to you.

Here is a list of some of the WWW sites for modern audio drama:

Jim French Productions (Imagination Theatre): http://jimfrenchproductions.com/ Atlanta Radio Theatre Company: http://www.artc.org ZBS Media: http://www.zbs.org/zbs.html LodesTone Productions: http://www.www.lodestonecatalog.com Midwest Radio Theatre Workshop: http://www.mrtw.org/mrtw

23. I am interested in re-creating some OTR drama. Where can I get scripts?

Check your local or national OTR clubs. Many have a "print library" that includes scripts. You can also point your browser at the University of Maryland's script page, at www.lib.umd.edu/UMCP/LAB/scripts.html

Jack French (OTRpiano@erols.com) said:

> One excellent source is the book. "One Hundred Non-Royalty Radio Plays" compiled by William Kozlenko, Greenberg Publ of NYC 1941. It's certainly out of print now, but many libraries would have a copy. I bought mine at a used book store a few years ago. The 100 radio plays in the book include adventure, mystery, fantasy, comedy and historical. Most were originally produced on educational stations in the 30s. Authors include Saroyan, Julian, and Liss.

Larry Groebe, of the Generic Radio Workshop, has several pages dedicated to on-line OTR scripts at http://www.genericradio.com

24. I can hear what sounds like another program playing in the background on many of my OTR tapes. Is this due to the tuning on the old radio or to the tape recorder that recorded the program?

In addition to the old radio being mistuned, similar problems can be caused by one or more of the tape recorders used before you received your copy of the program. Print-through has already been mentioned. Bob Burnham has a nice explanation of two more problems: crosstalk and channel leakage.

> Crosstalk and Channel Leakage are 2 different things. OTR collectors seem to have the most problem with channel leakage.
> When you hear another program faintly playing in the background in normal direction, this is usually Channel Leakage. This is a leftover problem from the 1970s & early '80s when most collectors traded on open reel tapes which were quarter-track mono -- there were different (separate) programs on left & right channels. This allowed 6 hours of shows to be placed on one reel. Unfortunately, many collectors would duplicate L & R shows simultaneously. Depending on the quality of the equipment (and its condition) it was common for one program to bleed into the opposite channel...especially if the collector was careless and allowed over-modulation.
> Crosstalk results when a tape is recorded (or played back) on a machine with mis-aligned tape heads. It can also occur when trying to record over a 1/2 track recording with a 1/4 track machine with dirty or mis-aligned erase head. You usually will hear another program playing IN REVERSE in the background.
> HOW TO PREVENT CHANNEL LEAKAGE AND CROSSTALK...
> If duplicating quarter track reels, copy ONE channel or track at a time.
> As for crosstalk, make certain your machines are kept in proper alignment. Use a high quality BULK ERASER if you re-use old tapes... this is especially true for those who use reels.
> Sorry, there is NOTHING you can do to remove these flaws once they are there.

25. Is there an internet news group for old time radio?

Yes. alt.radio.oldtime is available via some news servers. Since many news servers ignore alt.groups, you may need to contact your ISP to get that news group listed locally. See www.old-time.com/newsgroups.html for more information. Also try www.groups.google.com to sample some of the messages.

26. OTR network shows were usually heard at the same local time, no matter what the time zone. How did they do this?

Two ways: Many networks used telephone lines to carry the show from the studio to transmitter sites. The show was done live at least twice - once for the East coast, once for the West. After Bing Crosby spearheaded the introduction of recorded shows (about 1948), the East coast show was recorded for later telephone transmission to the West coast.

27. I'd like all the information there is about [insert name of OTR show]. Is there a FAQ that covers all the shows ever on the radio?

No. There are many books (Remember them? They have words printed on pieces of processed dead tree) written about what we now call "OTR". If you would like to contribute an original article about one or more facets of OTR, many of the webmasters of on-line OTR sites would be happy to consider archiving it. Go to top

28. Is there any information on OTR conventions?

Yes. There are several. Here are some of the larger ones: * Annual OTR and Nostalgia Convention in Cincinnati, OH (April) * Radio Classics Live, Brockton MA (May) * Annual Lum and Abner Society Convention (June) * REPS Radio Showcase (June) * Friends of Old-Time Radio (October) * SPERDVAC (November)
See the convention page at www.old-time.com for specific dates and contact person info.

29. Are there any WWW Bulletin Boards where I can post OTR questions and read OTR information?

Yes. Try Old Time Radio Bulletin Boards at www.old-time.com/otrbbss.html. That page contains a list of several old-time radio oriented WWW bulletin boards. You can also access OTR message boards at http://www.lofcom.com/nostalgia/phorums/ or try some of the USENET groups.

30. I would like to find recordings of [fill in rare OTR show name]. I have seen the show mentioned in Jay Hickerson's book, but haven't seen the show in any of the paper or on-line catalogs. How do I get this show?

Jack French, an expert on old-time radio and editor of Radio Recall, gives us this information:

> There's good news and bad news....the good news is if Jay's compendium says they are in circulation, somebody has them. The bad news is there is no guarantee you'll find them. Let's start at the beginning. If they're in Jay's book, and there is either the initials of a dealer, log preparer, or collector with that entry, the assumption is that person has some or maybe most. If the entry is devoid of such, we push on. Few dealers list rare shows in catalogs since so few people want

> to buy them. Generally the catalog represents a small part of a dealer's or collector's total holdings. There are at least forty OTR dealers in the country so you can contact each one with a specific inquiry. Most collectors belong to at least one OTR club. There are about 20 clubs. Most will publish your request in their newsletter for little or no cost. Most of the members of OTR clubs are not on-line so this is the only way to reach them. There are over 25 state and college archives that may have the shows. Most have no catalog but will answer any reasonable inquiry. Contact them all. All of the contact addresses for OTR clubs, pubs, dealers, and archives are contained in NARA OTR Source List. Contact me separately if you're interested in this low-cost research aid.

31. I see a lot of OTR MP3s on the WWW. Are these worth collecting? How about the OTR CD-ROMs being offered on the WWW, are they worth the money?

Just as with home made recordings of any type, the quality of OTR MP3s varies considerably. Some of the online MP3s may have been converted from low sample rate RealAudio(tm) files, others might have been "ripped" from low-generation masters. Most CD-ROMs for sale on the WWW were recorded using these varying-quality MP3s. In other words, the MP3s in themselves are "collectable" only for the enjoyment one might get from listening or further trading. They have little intrinsic value, and are of unknown quality. It might help to associate your estimate of quality with the provider's name, to attempt to predict quality and avoid long downloads of poorly prepared material.
Another point to remember - some OTR is still under copyright protection. Please observe applicable copyright laws.

32. Were any of the old-time radio personalities interviewed recently? Where can I find these interviews?

A large number of OTR personalities were interviewed by the author John Dunning. Stewart Wright, Editor of the RHAC Newsletter gave us the following information. (You can learn more about RHAC by checking their page at http://www.old-time.com/sponsors/rhac.html)

> The Radio Historical Association of Colorado (RHAC) has tapes of many OTR personalities interviews that were conducted by John Dunning in the 1980's. Several Radio personalities such as Elliot Lewis were interviewed more than once. The following is a fairly complete list of the Dunning interviews in the RHAC library.
> Steve Allen, Elvia Allman, Eve Arden, Hy Averback, Parley Baer, Parley Baer and Georgia Ellis, Parley Baer and Sam Edwards, Parley Baer and Whitfield Conner, Bill Baldwin, George Balzer, Harry Bartell, Andre Baruch and Bea Wain, Court Benson & Grace Matthews, Bernice Berwin, Mel Blanc, Ray Bradbury, Curley Bradley, Frank Bresee, Candy Candido, Hal Cantor, Charles Collingwood, Whitfield Conner & Haila Stodd, Whitfield Conner and Parley Baer, Whitfield Conner and Virginia Greeg, Norman Corwin, Mary Jane Croft, D Day Program J Macvane & Lar, Dennis Day, Rosemary De Camp, John Dehner,

Kenny Delmar, Jerry Devine, Howard Duff and Dick Joy, Richard Durham, Ruth Duskin Feldman, Sam Edwards, Sam Edwards and Janet Waldo, Alice Faye, George Fenneman, Morton Fine, Al Flanagan and Dick Mcdaniel, Paul Frees, Fred Friendly, Alice Frost, Art Gilmore, Roberta Goodwin (Bob Bailey's Daughter), Gale Gordon, Virginia Gregg, Virginia Gregg and Whitfield Conner, Phil Harris, Clarence Hartzell, Dennis Horseford, John Houseman, Bill Idelson, Raymond Johnson, Jack Johnstone, Jim Jordan, Dick Joy, Roland Kibbee, Sheldon Leonard, Phil Leslie, Larry Lesueur, Elliot Lewis, John Macvane, Fletcher Markle, Fletcher Markle, Grace Matthews & Court Benson, Dick McDaniel and Al Flanagan, Dick McDaniels and Pete Smythe, Marvin Miller, Shirley Mitchell, Carlton E Morris, Morris Kaplan, Frank Nelson, E Jack Neuman, Nelson Olmstead, Vic Perrin, Michael Raffetto, William N Robson, Eric Sevareid, Anne Seymour, William L. Shirer, Penny Singleton, Pete Smythe Collegiate Band, Olan Soule, Berne Surrey, Glenhall Taylor, Irene Tedrow, Cliff Thorsness, Les Tremayne, Lurene Tuttle, Veola Vonn, Janet Waldo, Gertrude Warner, Peggy Webber, Anne Whitfield, and Dr. Paul Winchell.

The Radio Enthusiasts of Puget Sound (REPS) also has interview tapes of many Old-Time Radio personalities. Most of these interviews have been conducted in the 1990's. Personalities include:

John Archer, Harry Bartell, Frank Buxton, Chris Conrad (Son of William Conrad), William Conrad, William Conrad & George Walsh, Stewart Conway, Norman Corwin, Sam Edwards, Herb Ellis, Charlie Flynn, Jim French, Sandra Gould, Burl Ives, Peggy Jordan (Granddaughter of Jim & Marian Jordan), Merrill Mael, Jo Anna March, Les Tremayne, Janet Waldo, Anne Whitfield Phillips, Rhoda Williams, and Douglas Young.

The REPS web site is located at: http://www.homestead.com/repsonline/index.html
Yesterday USA on the Internet is doing a series of live interviews with OTR personalities about one every two weeks. They start at approximately 8 PM (ET) on alternate Sundays and are about 1 hour in length. The interviews are conducted by John or Larry Gassman. So far they have done Harry Bartell, Herb Ellis, and Conrad Binyon. Listeners can call in questions.
You can find out more information on upcoming interviews by going to the YUSA Home page at http://www.yesterdayusa.com/

33. What MP3 player is best for OTR?

MP3s can be played on most computers, memory (RAM)-based players, hard-drive players, and CD-ROM based players. Each player has advantages and disadvantages. A chart comparing various CD-ROM players for OTR playback suitability is at www.old-time.com

34. I keep reading/hearing about the LOC hoarding a bunch of unreleased OTR episodes. Is this true? How can I get them?

The Library of Congress (LOC) does indeed store copies of many old-time radio shows. Any qualified person can access this material, or even get copies. There are, however, some restrictions on its use. Elizabeth McLeod, lizmcl@midcoast.com , who has done much research in the area, gives us this information:

> LOC material may be listened to at no charge at the Library's Recorded Sound Reference Center by "qualified researchers" working on a project intended for public distribution -- from a full length book to an article for your local OTR newsletter. You cannot, however, make copies of the material due to the contractural and copyright restrictions which the Library is required by law to observe. (While the LOC preserves and houses the material, it doesn't own it.)
>
> It is possible, though, to obtain copies of the material from the LOC by going thru a process which is neither fast nor inexpensive. But if you have the patience and are willing to spend the money for material you can't get any other way, here is what you do:
>
> 1. Locate the specific item in the LOC's SONIC database, accessible from the Recorded Sound Reference Center Homepage, http://lcweb.loc.gov/rr/record/
>
> 2. Make note of the LOC Call Number and description of the item you need.
>
> 3. Phone, fax, or email the Recorded Sound Reference Center with the items you are requesting -- contact information is available on site. The Reference Librarian who handles these things is Brian Cornell.
>
> 4. The Library staff will determine what legal permissions will be required in order to copy the items you want, and will contact you with the names and addresses of the people who must be approached in order to get these clearances. If the item is from the NBC Collection, you will need to clear rights with their Intellectual Property Department in New York. Additional clearances may be required if the program is under a separate copyright.
>
> 5. You must write to the people specified and ask permission to have a copy made. It's a good idea to specify why you need the copy -- and don't just say "because Joe Blow is my favorite radio comedian." If you don't have a professional-sounding reason, make one up.
>
> 6. Wait to hear back from the Legal Entities. If you've written to NBC Intellectual Property, you will get a letter back from them in about four weeks. Two copies of a legal contract will be enclosed, specifying what you may and may not do with the recording. Sign both copies, and send one of them back to NBC.
>
> 7. NBC will advise the LOC that it has granted permission, and in about three weeks you will get back a requisition form from the Library's Phonoduplication Lab. You'll need to check it over, sign where specified, and send one copy back to them with your check for the lab fee -- which starts at $86 per hour, not including the cost of tape stock. Then, fax the other copy of the form, and a photocopy of your check to the lab, and they'll begin processing your duplication request. (Yes, the fee is

outrageous -- but there are worse places to spend your money than with the entity which has done more for the physical preservation of broadcasting history than any other organization in the United States....)

8. In about four weeks, FedEx will deliver your tape. Needless to say, you may not make any commercial use of the recording in whole or in part -- and you had to sign a contract to that effect in order to get access to it. Commercial permissions are a whole separate case.
Like I said, this is not for everyone -- but if you're working on a serious project, it can be a valuable resource for getting access to material that simply isn't available anywhere else and which is unlikely ever to be released on the commercial market.
Elizabeth

35. Where can I find OTR to download?

The number and location of FTP sites that provide OTR changes more rapidly than does this FAQ. Your best bet is to check the backissues of the various alt.binaries.sound(s).radio.oldtime groups on USENET.
Hint: point your browser to www.groups.google.com and try your search from there

36. I bought some CDs with OTR MP3s. Some of the programs sound pretty bad. Why is this, and how can I make them sound better? If I make an audio CD from the MP3s, will it be better?

Wow. The answer to that question could fill a whole FAQ by itself. I'll try to keep it short.

Poor-sounding audio can be due to several causes. The audio on the tape from which the MP3 was made could have been poor, or the person that converted the analog audio to digital audio could have done a bad job. The statement: "remastered to digital audio" doesn't mean much, if the person doing the remastering does not pay attention to enhancing the source material.
MP3 and other digital compression techniques are lossy. That means the encoding process throws away data in order to make the file smaller. Although digital copies may not have noticeable loss, re-encoding, or encoding in a different digital format will lose even more data. Example: If somebody took a 32/22 MP3 and encoded it as a 64/44, it would sound no better than the 32/22, since data was lost in the original encode. Similarly, making a 128/44 MP3 out of an old, high-compression RealAudio(R) file would not improve the sound. The advantage to the higher bitrate is the possibility that the new encode will play in a larger number of MP3 players.

Some people record their RAs or MP3s onto cassette, and then trade the cassettes. At some time in the future, somebody else might try making an MP3 from the cassette. This analog - digital - analog - digital conversion results in a very quick deterioration of the sound because of the lossy compression I mentioned before. The new encode is a "sample of a sample". The sound deteriorates much more rapidly than does the "generation loss" experienced when duplicating tapes.

How can one tell if an MP3 was originally made with a high bitrate, or merely upsampled to a high bitrate? Listen to it, and compare it with a low bitrate sample. After all, the objective is to get as good an audio rendition as possible.

37. MP3s have lots of different numbers, like 32/22 or 64/44.  What do they mean?

Way back in the reel-reel days, folks could record audio at 1 7/8, 3 3/4, 7 1/2 or 15 inches per second.  The faster speeds gave better fidelity.  Today's MP3 recording does something similar.  Two measures of MP3 quality are "bitrate" and "sampling frequency".  Lets take a look at each:

Bitrate used to mean the transfer speed of the file.  Much OTR is encoded at a bitrate of 32 Kbps (Kilobits per second).  That meant that OTR could be sent along a relatively slow internet link at 32 Kbps without breaking up.  It also means that the digital OTR file is severely compressed when compared to the original analog file.

The lower the bitrate, the smaller the file, and the greater the compression. Since MP3 is a "lossy" compression format, greater compression means lower "fidelity" and more digital artifacts.  Since OTR is pretty low-fi to start, and is monaural, 32 Kbps usually worked pretty well.
Sampling frequency is the number of times a second the audio is sampled or stored.  Audio CDs, for instance, are sampled at 44.1 KHz/second  (over 44,000 samples per second).  The great majority of OTR is sampled at 22 KHz, which is quite good enough for voice and lo-fi music.

So, the typical monaural OTR file is encoded at "32/22", or 32 Kbps bitrate and 22 KHz sampling rate.  Remember, it is the bitrate that determines the file size, so a  file encoded at 32/22 is pretty much the same size as the same file encoded at  32/44.

So-called "standards" have evolved for internet use.  OTR is either 32/22 or 64/44 ("Hi-Q").  Audiobooks are usually 64/44.  AM-quality music is around 128/64 stereo.

Some OTR listeners "upsample" their OTR so the shows will play on different MP3 players.  They take a 32/22 OTR show, and re-encode it at 64/44.  This is usually NOT a good idea, because the encoding process loses more information. Once data is lost, it can't be restored.

NOTE: URLs mentioned in this FAQ may have changed.  For the latest information, point your browser to www.old-time.com, or join one of the internet mailgroups mentioned above. Email addresses listed here may have changed as well.

Yep welcome to what the rest of the world has for radio especially in places remote and poor and on the edge of economy and civility in other words welcome to the latest hits brought to you live from the ships that just came into port and if its working you can try for some of them just by looking on the net. you call it the ipod shuffle format i call it sounds and shades of home:) this isnt aimed at enliengtened types but to people who think every station has to play one kind of music..... grow up get a grip and understand not everyone is some dumb teenage kid who like 5 bands and wants to do air guitar while his sister sings into her hairbrush next door to top 40......
Oh i love format changes its like shark week on Discovery only less chum is

used and lots of blood in the water afterwards:) (and yes it happens to my favourites too so leave it) and playing everything on american radio is a long time comming I will have to find something else to excercise my fingers and wrist now that the constant dial changeing will not be required:)

There is such a thing as being TO unique. So different that you make a nusece of yourself and make it hard for you to be with and around others. For some its my uncultured posts and poor spelling that makes me to different. In the case of a country its very dangerous and bad to productivity and to leads to massive job loss and inconvience when trying to trade or do business with them. After a while its better to just throw up your hands and say forget it.  NOW how in the world does this have to do with radio broadcasting. Well there is a correlation. There is only 2 countries in the world who choose not to use the same broadcast standard for digital radio. Ironicaly there is also only 2 nations that dont use the metric system. We will use metric as the most widely known and used example. This simple neglect in the metric system has cost jobs, lives, compromised safety and done so much in so many little ways its unmeasurable. For keeping this post short I leave that as comment to set the stage and give a description of Eureka 147. Heres how eureka 147 works and what I am talking about.
EUREKA 147 DAB

The Eureka 147 DAB system is based on MPEG Layer-2 as source coding scheme. During the development one of the goals was to achieve "CD quality" audio quality. Therefore the target bit rates for one audio program should be between 192 and 256 kbps. for broadcasting in the DAB system. The lack of frequency and the necessity to offer additional audio services compared to the existing selection of services on analogue FM broadcasting has lead to a reduction of the average bit rate. In the UK, which is currently the most successful DAB market, most services are today transmitted with a bit rate of 128 kbps for a stereo service. And still the broadcasters and network operators are looking for additional options to reduce the bit rate even further.

Isnt it interesting that only the usa and japan (technically part of the usa) dont use eureka 147. Like metric this will make us hard to deal with. Its like being the only openly gay guy at a southern baptist convention meeting. I mean we dont use metric, the cost of this has been jobs and trade. Many metric nations forbid the use of non metric measure on labels and in production. This is so shipping weights can be reasonable and calculated and sizes can be unifrom. SAE measure has its own uniformity that is not concurrent to metric so trying to trade with a metric nation can be dicey. Now the world will not stop if we dont use eureka 147 in the united states but it will isolate us in yet another way. It goes back to my first assertion how different do we have to be to be so unhelpful to our national neighbours its easier NOT to deal with us?

fair use invoked for private demostration purposes and reduction of internet duplication of improper and inaccurate information copy from http://www.broadcastpapers.com/radio/ibc2003CodingSBR06.htm page for non orginial fair use material.

Hello, I'm a voice talent with a home studio (it's been a great investment), and I've decided to invest further in an isolation booth (like a WhisperRoom or VocalBooth) and an ISDN setup.

Both are hugely expensive, and I'm hoping to find what I need second hand. Anybody have any leads or thoughts about where I can find what I'm looking for?  Of course I'll check out eBay.

Thanks!

Tom Test

Hi group!

I need some good advice. I am working on a national, danish newspaper,
where the journalists are about to make audio for radio news when they
meet their sources.

Therefor we need to buy some digital recorders, that can do the
recording job.

It must have en intern mic at a standard, so the sound recorded can be
used in radio. But also it would be nice if it have a mic in--line for
external mic use (EV 635A).

The problem: It should at a affordable price under 175$/135�.

Any good advice on with model should be the choice?

Kind regards
Jan

AM radio multiplexing question: transmitting SSB in sync with AM (numbers stations, clandestine broadcasting)

I understand that it is possible to multiplex SSB transmissions on top of AM transmissions, especially on SW.
The AM transmission is decoded by the envelope or PLL coherer, the SSB transmission is ignored.

On a properly tuned SSB receiver, the AM transmission only partially interferes with the SSB transmission.

Some numbers stations use this transmission technique, but it just as valid if say Radio Free Asia were to use this technique by transmitting over Chinese domestic radio.

1. What is the math behind this transmission working (SSB is a form of Angle Modulation, not Amplitude Modulation)?

2. Are some receivers more affected by (interference where) SSB transmissions superimposed over AM than others? (PLL versus SYNC vs Envelope Detectors)

Sorry for not replying sooner, I got involved in other things.

Thanks for pointing me to the National State Building etc.

I've actually got a pair of headphones belonging to the General Manager of KATL in the 1940's. And his card. I bought them on Ebay. I just was curious of what the history was.  Maybe somone living in Houston knows. Or there are some old directories. Maybe if I write to a Houston Newspaper. :c)

Hello,

Would anyone have any pictures or illustrations showing any

battery-operated portable Telefunken cassette tape recorders from the
1960s and/or '70s?

I'm wondering if anyone might a photograph or diagram of such cassette
models from perhaps a book or magazine, etc. or if there might be such
pictures somewhere on the Internet.

If you have such a relic from the '60s and/or '70s, I'd greatly
appreciate a photograph of it.

I'll probably need to check with Telefunken itself concerning pictures
of old portable cassette tape recorders, but unfortunately I have found
in the past that usually this sort of thing takes such a long time, so
I thought I'd try here first.

Thanks very much,

Brad

I don't know which newsgroup would be the best place to ask this.

A local FM radio station is transmitting on multiple frequencies above and
below its normal frequency.
Its normal frequency is 93.5MHz, and it's also transmitting on 500kHz
steps between 91.5MHz and 95.5MHz, with the outer bands a few decibels
above the noise floor.
I hooked a multimeter up to the input of the 5-stroke signal meter on my
radio, and here's the values I got:
91.5MHz: 130mV
92.0MHz: 235mV
92.5MHz: 290mV
 92.7MHz: local station: 250mV
93.0MHz: 330mV
93.5MHz: 290mV
94.0MHz: 330mV
94.5MHz: 255mV
 95.1MHz: local station: 300mV
95.5MHz:  50mV
noise floor: up to 20mV

The most realistic waveform I can get with that data is very strong
(>1000mV) pulses about 500ns wide, with weak (~100mV) reversed regions
between.
I don't have an oscilloscope to verify this, though.
Have any of you experienced this kind of problem with your
equipment, and what was it caused by?

Interesting. Some of this could be subcarriers for stuff like Talking
Books; I know there is at least one station in the OKC.ok.us area
that transmits a subcarrier for broadcasts to the blind and visually
handicapped, since my late wife used to have a receiver for it. Possibly
other subcarriers are Muzak or similar broadcast "background music"
services.

Can you get someone to look at that that with a spectrum analyzer? Can you get hold of an NBFM receiver?

If it's really something wrong with _them_, then I'm sure their engineer would be very glad to know before the FCC sends a pink slip. And if they're transmitting special-purpose subcarriers, the engineer will be able to tell you about it.

Are you certain they are putting out multiple signals -- or -- is their signal simply overloading your equipment and generating spurious responses that look like multiple signals?  Remember, a commercial FM broadcast station is putting out a zillion or so watts ERP -- that can cause a lot of overload for a short distance around the antenna.

might just be that the radio is being overloaded by the local radio
station and this is showing up as images

have you tried this test on another radio reciever?

What is a five stroke signal meter?  Red bars on a consumer stereo?

You use a field intensity meter or a spectrum analyzer to measure
signal strength.  An oscilloscope isn't really very useful.

Any feedback on Podcasting would be appreciated at this point. My public radio program is broadcast here in Arkansas and streamed on the web live, but I recently have learned far too little about podcasting to even know what questions to ask. My server techs don't even know much about it yet. So my question is this...is podcasting the way to add more listeners to my program and what is the best method to use to get it done? I have a website for the program and I would like to give listeners a link to each topic in the archive so all they have to do is click on the topic and they could hear the program. Any comment?

 The in-home AM/FM radio is already going the way
> of the 1950's short-wave,

And what way was that?  There was virtually no short-wave radio penetration in the 1950's..maybe .5% of homes has short-wave reception capability at most.  There's never been a significant short-wave penetration among non-hobbyist listeners in the U.S.-- never, ever.

That said, yes, there is a possibility that AM./FM as we know it now will go away.  It is, in fact, more than a possibility.  It's a certainly with time. But who cares?  When it does go away, it'll be replaced by something else that serves roughly similar needs and desires and will probably be niftier and more appealing--else why would AM/FM go away?  I could not care less if a particular technology goes away.  It happens all the time.

Now, I'll go away.

So how does streaming make bottom-line sense now when it didn't three and a
half years ago, when hundreds of stations pulled their signals to avoid
having to pay additional fees to stream ads that used unionized talent? Are
CC and Infinity scrubbing their webcasts of such ads?

Howard

Very, very much not an urban setting, but West Virginia Public Radio was exclusively horizontally polarized at most, if not all, their dozen mountain top transmitters. The chief emgineer contended it worked better in the mountainous terrain.  Their situation might have assumed a fixed transmitter power out, thus the circular would result in half the ERP (per polarization).

I note that they have recently obtained construction permits to convert to circular.  Perhaps they are buying new transmitters - which will have much higher efficiency.  This way the power bill and wires up the mountain need not change (much) to get the higher transmitter output needed to maintain the same horixontal ERP when going to circular.

For sale:

(The "Radio Crazy" is baaaaaakkkkk!) Hi!

Partial ownership in new LPTV station in Rehoboth Beach, DE. Channel 59, 20,000 watts ERP. Will place a grade "A" contour over Rehoboth Beach, Lewes and Dewey Beach. The FCC will soon allow us to apply for a "companion" digital channel for HD TV, etc.

I am the 100 percent owner of the construction permit.

This is a joint venture. There is an element of risk and you could lose all or part of your investment.

Active or inactive investors with at least $10,000 each are welcome. A Delaware corporation will be formed.

For the "unwashed", Rehoboth Beach is a "filthy rich" beach resort city. The Winter population is only 1,495 (2000 census)but they get over 2.7 million visitors per year. Condos on the beach go for $995,000 and rent for $2,100 per week in the Summer.

Tel: (478)741-1710 in Macon, GA. Please do not mask your caller ID data as such calls will not go thru. If you don't like the deal, nobody will ever call you back from this entity and nobody will give your contact information out!

References:

a-My parole officer. Mr. Larson E. Rapp. c/o Zing-Zing prison, Ossingstink, NY. Tel: 1-800-IMA-THUG.

b-Trade reference: Brazilian Bandit Airways, Oshkosh Airport, Oshkosh, WI. Purchased a one-way ticket to

Rio using all small and unmarked bills. Don't worry,
we won't deposit your funds in my Swiss bank account
until I am safely in Brazil!

(the references are in jest, but the deal is real!)

73,

Meyer Gottesman, W6GIV

Some of them are people who collect and restore old radios and can't find a decent AM station to show off their work so they buy or build a part 15 transmitter and feed it old radio programs or music.

Here is a link to a very intriguing story about how the RIAA's campaigns against music downloading might be more about protecting its own self rather than the artists that it claims to represent.

There has always been a delicate balance between the music industry and radio. They RIAA needed for radio stations to play their songs to give their artists exposure so people would buy their records, but every time a song got airplay, that increased the chance that someone was going to record that song off the radio and save having to buy an expensive album full of songs no one wants. I know, because I taped tons of songs back in the 70s straight off the radio. My music appetite was much larger than my budget for albums. Now, fast forward 30 years, and the same thing is happening, but now you add satellite radio and the internet to the mix. Plus, now, nearly everyone has access to better quality recording equipment than I used back in the 70s, so homemade CDs and even DVDs are everywhere, not to mention MP3 players that store albums of music on a card smaller than a postage stamp.

So the RIAA is on the very edge of obsolescence right now, and eventually their lawsuits against people just like me are going to drive the public to a point of no return. And if the artists start to sense a backlash against them, then they'll drop the RIAA and find an alternate way to make a living with their music.

End of sermon. Here's the link to the article:

Can't speak for Infinity - Uncle Mel must have just lifted the streaming ban, because to date I've never been able to find Infinity stations that stream. But Clear Channel has been streaming Internet broadcasts of their stations with no ads at all for a year or two... first using HiWire, and now using... I forget who.

Yes - and as they use automation more and more, it gets easier. The
"stream" will have an announcement (don't worry, we're not playing you
the commercial", or, morel likely these days, a commercial produced
with non-AFTRA talent. This gives the streaming station another
potential revenue opportunity.

If you currently have streamed audio making your broadcast available in a podcast would take very little effort and potentially open your base to new listeners. The following is a podcasting tutorial that makes things very easy - http://www.feedforall.com/podcasting-tutorial.htm

In addition, once the podcast is created submit the feed to the list of podcasting sites http://www.podcasting-tools.com/submit-podcasts.htm this will increase the shows exposure.

Best,
Darren

I think this was the case at the time when most listeners were at home
with horizontal folded dipoles.

The big deal is that in the past 15 years or so, radio listenership has
moved very much into the car (even for NPR which tends to have more home
listeners than most stations) which has made vertical components that
much more important.

>Hey Guys!! Does anyone know where the first radio station was located
>in United States? Thanks!!!

Define "radio station". Do you mean the first regular radio transmission from a permanent location? The first licensed radio station? The first commercial licensed radio station?

Credit for the first wireless radio telegraphy transmissions in the U.S. is generally given to Guglielmo Marconi, who demonstrated the first controlled transmission and reception of long-range radio signals in 1895.

Daily time signals were transmitted by the U.S. Navy stations beginning in 1904.

Hobbyist radio broadcasting also began in earnest in 1904 with the marketing of complete transmitter-receiver systems by Electro Importing Co., NYC.

A number of events in 1919-1920 could qualify as the "first" radio station in the U.S. that broadcast a regular schedule of programming:

# A station located at the Glenn L. Martin aviation plant in Cleveland, Ohio, under the oversight of F. S. McCullough, which transmitted a concert on April 17, 1919, and was also reported planning weekly broadcasts, according to the August, 1919 Electrical Experimenter: Caruso Concerts to Amateurs by Wireless 'Phone.

# WWV, set up as an experimental station in 1919 by the Bureau of Standards in Washington, District of Columbia. An Almost Unlimited Field For Radio Telephony, which appeared in the February, 1920 Radio Amateur News, enthusiastically reviewed a test broadcast by WWV, noting that recent advances meant radio was poised to make "Edward Bellamy's dream come true", for soon it would be possible to transmit entertainment directly to homes nationwide. The May, 1920 issue of the same magazine reported on the continuing tests in Washington Radio Amateurs Hear Radio Concert, while Music Wherever You Go, which appeared in the August, 1920 Radio News, reviewed the Bureau's "Portaphone", a portable radio receiver designed to allow people to "keep in touch with the news, weather reports, radiophone conversations, radiophone music, and any other information transmitted by radio". And a report in the October, 1920 Scientific American

Monthly, Radio Music, noted that the Bureau's Radio Laboratory was now broadcasting Friday-night concerts, and "the possibilities of such concerts are great and extremely interesting".

# 2XG, Lee DeForest's experimental "Highbridge station", which returned to the New York City airwaves after being shut down during the war. On November 18, 1919, the station broadcast on-the-scene reports from the Wesleyan-New York University football game, as reported in Foot Ball Score--Via Wireless Telephone by Morris Press in the December, 1919 Radio Amateur News. A report in the January, 1921 QST noted that the company was now offering a nightly news service broadcast.

# 8XK, beginning in late 1919, licenced to Westinghouse engineer Frank Conrad, near Pittsburgh, Pennsylvania. An early report on this experimental station, Amateur Radiophone Concerts, ran in the January, 1920 Radio Amateur News.

# DeForest Company engineer Robert F. Gowen's experimental station in Ossining, New York, 2XX, which beginning in late 1919 made test voice and music transmissions, reported by Gowen in Some Long Distance Radio Telephone Tests from the April, 1920 Electrical Experimenter, and by Marlin Moore Taylor's Long-Distance Radio Talk With Small Power, from the April, 1920 Telephone Engineer. These tests were followed by more comprehensive entertainment programs, including one featuring Broadway's Duncan Sisters, reviewed in "Radio Vaudeville" Heard Miles Away from the May, 1921 Science and Invention.

# 1DF, an amateur station operated by A. H. Wood, Jr., of Winchester, Massachusetts, which was reported by the February, 1920 QST to be transmitting concerts on weekday nights and Sunday afternoons.

# A station at McCook Field conducting point-to-point communication and broadcasting tests, according to William T. Prather's report, Radio Telephone at Dayton, Ohio, in the May, 1920 Radio Amateur News.

# 8XB, beginning in early 1920, an experimental station operated by the Precision Equipment Company in Cincinnati, Ohio: 8XB First Station to Radiocast, by Lt. H. F. Breckel, Radio Digest, October 4, 1924.

# A cluster of stations in the San Francisco Bay area, an early example of which was reported in American Legion Couples Dance to Music by Radio from the March, 1920 Radio Amateur News. The most prominent, however, was Lee DeForest's experimental station 6XC, the "California Theater station", beginning in April, 1920. Wireless Telephone Demonstration in San Francisco, an early report on 6XC's activities, appeared in the August 21, 1920 issue of Telephony, while Talking to a Nation by Wireless, from the September 1, 1920 Journal of Electricity, reviewed a broadcast by 6XC of a talk by American Radio Relay League president Hiram Percy Maxim, who predicted that someday radio broadcasts would have audiences in the millions. Radio Telephone Development in the West, an overview of early regional radio activity by Harry Lubcke, comes from the February, 1922 issue of Radio News.

# 9BW, Charles A. Stanley's amateur station in Wichita, Kansas, which in mid-1920 featured Sunday night sermons by Dr. Clayton B. Wells, reviewed in Enter--The Radio Preacher, Radio News, November, 1920.

# 8MT, an amateur station operated by Robert M. Sincock in Uniontown, Pennsylvania. A one-line notice in the June, 1920 QST reported that the station was being used to "broadcast information on entries, schedules, etc., for the races to be held at the Uniontown Speedway".

# A concert performance by the Georgia Tech band in Atlanta, Georgia, transmitted by radio through the efforts of Sergeant Thomas Brass, as reviewed in the July, 1920 issue of Telephone Engineer.

# May L. Smith in Manchester, New Hampshire, who in mid-1920 was featured as the first prize amateur station winner in the August, 1920 Radio News: Radio Station of Miss May L. Smith.

# 2AB, the amateur station of Morton W. Sterns in New York City, which Concerts de 2AB in the August, 1920 QST noted was broadcasting regular Friday evening and Sunday morning concerts.

# 2XJ, AT&T's experimental station in Deal Beach, New Jersey, whose weekly Tuesday night concerts, consisting of "selections by famous artists, band music, humorous pieces and lectures" were reported by Bright Outlook for Amateur Radio, in the October, 1920 Radio News, along with the prediction that "the next five years will see many radical changes". This station also inspired a whimsical innovation by W. Harold Warren, reviewed in The Radiophone on Roller Chairs, Radio News, August, 1920.

# 8MK, an amateur station on the air beginning August, 1920 for the Detroit News: WWJ--The Detroit News (extract), by the Radio Staff of the Detroit News, 1922.

# Plans by the Michigan Agricultural College in East Lansing, Michigan for "a regular wireless telephone service, through which weather reports, crop reports, extracts from lectures on agricultural topics, etc., will be disseminated", reported in Michigan College Plans Wireless Telephones for Farms from the August 14, 1920 Telephony.

# 9BY, an amateur station licenced to the Young & McCombs Company in Rock Island, Illinois, which the September, 1920 QST reported was planning Thursday evening concerts, to begin around September 1st.

# 2ADD, an amateur station licenced to the Union College Electrical Laboratory in Schenectady, New York, which began weekly Thursday night concerts in October, 1920, according to Jetson O. Bentley in Radiophone Concerts, from the December, 1920 QST.

RCA made its broadcast debut in 1921, using a temporary longwave station, WJY, with its broadcast of a Jack Dempsey heavyweight fight. A transcript of the fight was sent to Westinghouse station KDKA,

Pittsburgh, for rebroadcast. KDKA, generally credited with being the
first commercial radio station in the U.S., had begun regular radio
broadcasts in 1920.

For more info: http://earlyradiohistory.us/

Btw, a simple Google search using the keywords "u.s. first radio
station" unearthed the site.

"Uncle Mel" is now running Sirius, and is no longer the head honcho at
Infinity.

Several big market Infinity FMs have been streaming via the closed AOL
for Broadband system for a few months now.  I believe this

"experiment" started even before Mr. Karmazin left Infinity.

Shortly thereafter, they started streaming WCBS/880, the NYC all-news station...the first Infinity station to stream outside the AOL network.  And just last week, they launched most of Infinity's big market all-news and news/talk stations into streaming.  So, if you haven't found Infinity stations that stream, you haven't looked very recently :)

I can't speak for Infinity either, but the streaming ban was lifted after Uncle Mel left the company.  So far only spoken-word formats are being streamed.

Samantha <chevychic1022@aol.com> had written:
| Hey Guys!! Does anyone know where the first radio station was located
| in United States? Thanks!!!

Guess what. No one really knows. The first radio station in any *state* often can't really be determined.

It's even true of cities: for example, the first radio station (voice) operating in Kansas City may be one of: WDAF, WHB, or WOQ. Early stations often shared transmitters and definitely shared frequencies. So then you get to the question of what is a station.

So perhaps you should do your high school term paper on something else.

 I listen to WABC quite a lot at night (John Batchelor mostly), and they
routinely pull those types of ads from the webcast  and either replace it
with dead air or a filler of some sort. Some ads and brokerage shows get
through.

BPL Inherently Flawed, League CEO Tells Broadband Alternatives Conference

Newington, CT, Mar 22, 2005--ARRL Chief Executive Officer David Sumner, K1ZZ, told a New York City conference on "Alternative Broadband Platforms" March 18 that broadband over power line (BPL) has "an inherent technical flaw"--interference potential--that cannot be completely nor inexpensively eliminated. He also told the gathering that no BPL system operator can guarantee that its system will always work or that it will be allowed to operate. Sumner said the problem is simple: Power lines were not designed to carry broadband signals, so they can't do it very well...

Tuesday 22 March 2005
swissinfo

The Swiss Broadcasting Corporation (SBC) says it will axe up to 80 jobs and eight language services at swissinfo, leaving only a reduced English department.

The corporation's board said on Tuesday that it was acting in response to the government's decision to end funding for swissinfo.

As we all know, the FCC rigidly enforces that prohibition. We also
know that a Pacific transmitter location is a perfect place to serve
the Canadian Maritimes.

You know, it's no secret Mel is no fan of streaming...but I don't really blame him in that case.

At Infinity, his strict "no streaming" policy increasingly meant that the company seemed to be walling itself off from the growing world of digital audio.

But at Sirius, his company is now PART of that world, and I can't blame him for cutting off free feeds of exclusive talent, that you can't hear anywhere else.  I do believe they should stream those folks to subscribers via their in-house streaming that already exists for music stations on Sirius.

Nor could I, if Sirius were to offer a web-only subscription option for those of us for whom the available Sirius hardware remains unacceptably inflexible.

Unfortunately, the only way to subscribe to the web stream is first to purchase Sirius hardware, because you need the hardware's serial number.

And as a matter of principle, I'm not about to buy any hardware that isn't at least as portable as a 1980 Sony Walkman.

Yeah, it was Joseph P. McCarthy (J. P. McCarthy on the air) on WJR.  I can't remember the years Joe moved from Detroit to Cleveland and then back again. He the WJR morning man for many years, stayed in Cleveland just a few years, then moved back to WJR for many more years.  He died of a fairly rare form of cancer several years ago.  I have a CD that WJR produced commemorating his career--a recording of the morning broadcast on WJR the day after his death.

For sale:

(The "Radio Crazy" is baaaaaakkkkkk!) Hi!

Partial interest in new LPTV station licensed to Rehoboth Beach, Delaware. I am 100 percent owner of the CP. It expires May 5, 2007.

This is a joint venture. There is an element of risk and you could lose all or part of your investment.

Active or inactive investors with at least $10,000 each are welcome. All investors would be investing!
(Duh?)

Tel: (478)741-1710 in Macon, GA. Please feel free to
call anytime. ID-blocked calls will not go thru so
don't even think about it! (Nasty leer!).

Reference: (My parole officer). Mr. Larson E. Rapp,
c/o Zing-Zing prison, Ossingstink, NY. Tel:
1-800-IMA-THUG.

(My trip to Zing-Zing was prompted when I heard some
strange ham on 15.00000000 Mhz and when I asked him to
QSY, he asked me to QRT! My door was broken down by
agents less than ten minutes later. I can't understand
why that ham kept humming a 440 Hz tone and telling me
the exact time! (?????)

The references are in jest, the LPTV is VERY REAL!

73,

Meyer Gottesman, W6GIV

Interesting. What exactly is in the book that you're afraid people will see?

(File under: Methinks he doth protest too much.)

Apparently so.   If you listen to WBZ radio on the 'net,  you hear Mayor Menino,  ads for the Red Cross,  PSAs,  etc.

Also,  the broadcast industry ran away from the 'net,   possibly fearing it, not understanding it,  or a combination of both.

Kinda like the motion picture industry - they feared television,  they feared pay TV,  they feared cable TV (as did a lot of the broadcast industry for awhile),  they feared the VCR,  of all things.    Some of these "fads" turned out to be their best friends,  and their best hope for survival! They were just too stupid to realize it at the time!

Well, maybe I was a little prophetic a few years ago on this, but it's deja vu all over again.

The broadcasting industry didn't UNDERSTAND the Internet, and no one knew where, and in what direction it was going to go five years ago.

Some, in this group, condemned the Internet mode of broadcasting. A fad. Technically inferior. Can't reach as many people. Blah blah blah. A lot of absurd statements.

Now, they realize if they don't climb on board, they're going to be left at the starter's gate (duh!)

(This from the station's web site).

Good Friday through Easter Monday, Radio Caroline celebrates our 41st anniversary with live broadcasts from our radio ship Ross Revenge berthed at the Tilbury Liner Terminal, Essex. Easter Saturday BBC Radio Essex joins us on-board for another Pirate Radio Essex broadcast. Visitors are welcome and access on board is free.

Special programmes this Easter weekend live from the Ross Revenge:

Good Friday: Rob Leighton's breakfast oldies special, Jim Richman launches live from the Ross Revenge, Elijah & Jim Ross with a tribute to the late Tony Allan, John Patrick's Rock show and Pandora at midnight.

Easter Saturday: Tony Christian's morning show, Pandora's tribute to the late Tommy Vance, Clive Garrard, John Patrick's Request Show, Mark Dezzani's Revenge Party. Join Sam & Suzy overnight at midnight. BBC Radio Essex live from the Ross Revenge (see below for details.)

Easter Sunday: Martin Smith, Pat Edison, Doug Wood, Mark Stafford & Dave Foster. In his show Mark Stafford plays music & clips from Radio Caroline's 41 years of broadcasting.

Easter Monday: Steve Silby, Barry Marsh, Barry James, Paul Douglas and Riga Steve.

BBC Radio Essex Live from the Ross Easter Saturday:

Following the success of BBC Radio Essex's 'Pirate Radio Essex' programmes to celebrate 40 years since the launch of Radio Caroline last year, they will be broadcasting live from the Ross Revenge Easter Saturday afternoon. BBC Radio Essex presenter Steve Scruton will be presenting a four-hour special from the 558 studio 1 on-board the Ross Revenge between 2 and 6pm. It will be transmitted across their AM & FM network. This year's broadcast will feature the music of Easter Week 1965. As well as the hits from the British charts of the time, there will be pirate radio plays, some of which may not have been heard for forty years.

"We're keeping the dream alive," said presenter Steve Scruton, who had the original idea to mark last year's 40th Anniversary. He added, "This year we're broadcasting from a radio ship full of pirate heritage." Radio Caroline's Peter Moore said, "Ross Revenge is the last fully-operational ship in the world. She is equipped with all the typical broadcast hardware of the sixties, but has also been adapted to handle the digital age. We are very pleased to be sharing the ship with BBC Essex, the first such co-operation that has ever taken place." Peter added, "We challenge Tim, Steve and Ian and any listeners who may step aboard, not to be gripped by the memories and nostalgia of what was a significant and exciting era of UK radio." As well as Steve Scruton, Pirate BBC Essex presenters Ian Wyatt and Tim Gillett will be aboard the Ross Revenge contributing to the show. "We're very privileged to have been invited by the Radio Caroline organisation aboard their special vessel," said BBC Essex Programmes Editor Tim Gillett. "The Ross Revenge is regarded by offshore radio fans as a very important part of the pirate radio era."

There is now a new studio on the Ross Revenge.

Visitors are welcome during our live broadcasts this Easter weekend and there is no charge to come onboard.

Come along and have a free tour of this historic vessel. Merchandise will be on sale. Live programming from our radio ship and former Icelandic trawler recommenced following a complete studio refit and the installation of a new central heating system. Thanks to Grant Engineering for their generous help in installing this new more efficient boiler for heating the boat.

The Ross Revenge is moored at Tilbury Ferry Terminal. Click on the banner below for details or call Vaughan (evenings & weekends only) on 07890 279049.

OK, how does Internet streaming benefit WBZ in tangible dollars and cents? If people in the Boston market choose to listen via the 'Net at the office, maybe they're hearing 'BZ where they normally would not be able to, but they're not hearing the advertising that drives the station's earnings. People in other cities, states, countries ... how does their listening to the Web stream matter? Yeah, I suppose Bobby in Birmingham and Rajiv in Bombay would be more likely to listen to WBZ in their cars should they ever move to or visit Boston, but that can't be the justification. I like Internet radio just as much as the next guy, and I'm glad to see more stations returning to cyberspace, but I'm still wondering how broadcasters hope to recover the costs of streaming.

Howard

March 24, 2005

In what may mark the coming-of-age for satellite radio, Hyundai announced it will include XM Satellite Radio as standard equipment for all its models starting next year.

While several manufacturers offer Sirius Satellite Radio or XM as an option, Hyundai is the first to make satellite radio a standard feature. The company expects 500,000 cars to be fitted with XM's service by 2007. Separately, Sirius announced that Jaguar, Land Rover, and Mercedes Benz will join other manufacturers that offer Sirius equipment as a factory-installed option...

Thursday, March 24, 2005
Rhoda Tse

"Americans are tuning in!" to Christian radio -- at least according to statistics from the world's largest association of Christian broadcasters and the nation's foremost Christian survey group.

Statistics from the recently released Barna report showed that nearly half of all adults in the United States - around 46 percent - are tuning in to Christian radio broadcast in a typical month. That's 141 million Americans listening to some form of Christian broadcasting at least once a month.

What's more, nearly 28 percent of those on the list are non-Christians.

The National Religious Broadcasters (NRB) meanwhile found in a separate study that the number of religious stations grew 14 percent in the past five years as compared with the four percent growth in the overall radio industry.

NRB President/CEO Dr. Frank Wright calls this growth, "dramatic." The fact that Christian radio stations grew at a 14 percent rate is "a reflection that there is underlying demand." There is an interest among many Americans for the "spiritual," and these latest statistics indicate growth of this interest over the years.

However, according to the Barna survey, the reason for the decline in non-Christian broadcasting may be because the absolute number of nonbelievers who listen to the radio declined. In 1992, 38 percent of the radio audience were unbelievers, but the number dropped to 28 percent, the survey showed.

But to Dr. Wright, the decline in overall radio usage does not reflect a decline in Christian interest. Rather, he said nonbelievers are likely to be tuning into the "explosion" of other broadcasting mediums, such as television and Internet.

"We need to use every means of distribution that we can find. Our focus is on the Gospel message, less the delivery system. We'll always strive to stay abreast of media - so we want to use every available platform," said Wright.

The National Religious Broadcasters (NRB) is an association representing Christian communictors in radio, television, Internet and film.

Hi

about ten years ago I bought a batch of used 10" reels that had come from a syndicator in the VA (USA) area called Studioline. Some of these were shows hosted by DC area Jazz historian Felix Grant. I never had te heard to erase these, and recently learned of a University that houses Mr. Grant's vast collection. I asked if they would like CDs of the shows I had, and they said yes.

Several weeks after I sent them over, Mr. Grant's widow called me and wanted to know about the tapes and about Studioline. I told her basically the above story - to be honest, I don't even know where I got them.

Does anyone have any information on Studioline - or more of these tapes?

thanks

btw - here are the Felix Grant archives....

I think the logic goes something like this:

- If few people listen, then it doesn't cost very much, and we make a few of our P1s happer because they can get the station in their offices, which helps to build brand loyalty.

- If lots of people listen, we can sell that.

H Glazer <hmglaz@worldnet.att.net> had written:
|
| OK, how does Internet streaming benefit WBZ in tangible dollars and cents?
| If people in the Boston market choose to listen via the 'Net at the office,
| maybe they're hearing 'BZ where they normally would not be able to, but
| they're not hearing the advertising that drives the station's earnings.

Data point: KCBS in San Francisco is touting its (new) stream as
giving listeners the ability to listen at the office. The audio
stream at the web site is being heavily promoted on-air.

Either the marketing department isn't communicating clearly with
the sales department, or they're laying the groundwork for what
they hope to be a new revenue stream.

Likewise with KFWB.  One reason for the corporate change of heart on
streaming, I've been told, is problems with building penetration by AM
signals.

If KFWB's promotions are any indication, they indeed have such hopes.
KFWB promos also pitch advertising avails.

Yeah, but they'll be trying to sell that to the advertising agencies they deal with, who know full well (I would think) that their AFTRA-talent-voiced ads aren't being heard by any of that burgeoning number of Internet listeners. People who listen to WBZ in the office, most likely, already listen to WBZ in their cars. Brand loyalty has already been built. The only really new listeners WBZ stands to gain are the out-of-market ones that Boston-based advertisers don't care if they reach, even if the stream wasn't scrubbed. Are Sullivan Tire, Giant Glass, or whoever, really going to pay more because 'BZ is now being heard online by people who can't hear their ads?

Now that Mel is gone, all of the Infinity N/T outlets are doing it.
They did a trial in New York on WCBS and reportedly got very good
response.

Most AM stations cannot be received well in any large office or retail
facility.  That is why streaming will be increasingly important.

Also, if you look at the power that some stations have in some metro
areas, and the other technical factors, both AM and FM, then it will
make even more sense.

KFWB is 5kw-U, KNX is 50kw-U, but there are some that are only 1kw-U there in such a large locality as LA.

The FM side is no different.  I once was on the 405 in Orange County and started to lose KMZT before the John Wayne airport.  KUSC wasn't much better.

Also, there are translators and other things that attract listeners. Translators usually cover a much smaller area, some only run on a few watts, most outside the Northeast and Southern California can have up to 250 watts or more, and cover large areas, almost as much sometimes as a Class A FM.  LPFMs also have taken to streaming.

Religious stations like K-Love thrive on streaming.  In fact, K-Love is usually in the top-5 of streaming stations as far as total time spent listening.

Also, non-broadcast outlets like BYURadio at http://www.byuradio.org/ (although they have a satellite feed on DISH Network, and are on one LPFM), and KZION at http://www.kzion.com/ have streams and pick up quite a few listeners.  I don't think either of these have hit the top-50 in terms of TTSL yet but well could.  There are others that have made the top-50 that are not broadcast either.

You're looking at it wrong.

People who can't get WBZ in the office might start listening to WBUR instead. When they get back into their cars, there's a chance they might not leave them set on 1030 (particularly if they heard a tease for something they want to listen to on the way home), and that's potentially a P1 lost.

Why I don't listen to radio any more.......

"News Talk 1250, WTMA"
"Your home for news and talk, 730 WSC"
"News Talk 1250, WTMA"
"Your home for news and talk, 730 WSC"
"News Talk 1250, WTMA"
"Your home for news and talk, 730 WSC"
"News Talk 1250, WTMA"
"Your home for news and talk, 730 WSC"
"News Talk 1250, WTMA"
"Your home for news and talk, 730 WSC"
"News Talk 1250, WTMA"
"Your home for news and talk, 730 WSC"
The minute record is held by WSCC (WSC is RCA Communications' marine callsign) at 12, in 60 seconds.  The hourly rate record is held by WTMA at 237/hour during a local talkshow where they ran out of subjects.

I've called into both and BEGGED them to go easy on the self-promotional repetition, to no avail.  "We all know what the station's callsign is and what frequency it is on.", I tried to convince them.  Deaf ears....all deaf.  Someone told me they do that so we don't forget in case the ratings people call us.

Pick any station with either computer or talking heads....same thing.
"News Radio 750, WSB"...over and over and over.

When the rating company called to ask me what station I listened to, I told her I liked BBC-2 better than BBC-4, but listened to both.  She was speechless until I explained where REAL radio broadcasting was still being produced.  Thank you, people of the UK!  I offered to pay my radio tax to BBC to help pay my share of the internet server costs.  They told me thank you for offering but it wasn't necessary.  I replied to that with an offer to pay for BBC-TV on broadband of the local programming so I could watch great British comedies less than 5 years old like PBS intermittently broadcasts.  They're actually thinking about it!

Broadcasters in the USA have killed radio and TV.  Remember when NAB used to limit the spam to 10 minutes an hour with actual PROGRAMMING for 50 minutes?  We'll never see that, again.....

Dammit.....

One reason they're doing it on the all-news stations and the big market news/talkers:  There are very little rights and blackout issues.  WCBS, for example, has to black out the Yankees, and WBZ in your hometown would have to do the same with the Bruins (if there was a hockey season, natch).   KFWB in L.A., the same with the Dodgers. KDKA in Pittsburgh will have to black out Bill O'Reilly, unless Infinity corporate sibling Westwood One has less problems with streaming nowadays.

But that's about it, really.  Most of the big market Infinity all-newsers produce their own programming almost all the time.

The other reason: It extends the brand.  All-news stations, especially, want to appear ubitquous.  By showing up in your office computer (especially with those AM in-building signal problems), and all over the world, they assure P1s that they're connected to the station no matter where they are.

They'll make some change off of selling the stream insert ads... my old home of KFBK/Sacramento is selling them with some success.  But it's almost a secondary thing.

We have heard and read the paranoia, even in this group.

One friend of mine who worked in radio told me his management was paranoid over "dead air" or even breaking format in the evening, because a listener might change the station and never put it back on theirs during morning drive.
Would this argument make sense?

- they want you to listen in the car -- AND THE OFFICE -- and they don't want you listening to something else in the office. There are a considerable number of stations that DON'T have the union-written commercial situation, and they've been streaming. You might find one of those stations, put it on in your car, and never go back to the station that is the internet fraidy-cat.

- if they don't go after the internet crowd, someone else will.

Finally - since streaming stations "drop in" non-AFTRA PSAs, could it be possible that they would "drop in" non-AFTRA commercial spots? And those bring in money.....

Not much interest in the inventors newsgroup...anyone like to elaborate on this concept or propose a newsgroup where participants might like to discuss prototyping this concept?

## Introduction

TIRK is proposed as an alternative to the coin-operated music jukebox found in a public bar or pub. As an alternative, the user is paying for live music streamed straight off the Internet through a broadband connection to any worldwide internet radio sites. Selection is made via a touch-screen GUI (graphic user interface) that categorises internet radio music stations into both country and music genre categories. (see www.vtuner.com) Pricing is suggested to be set at the traditional jukebox level. That is $2 for 5 minutes.

## Development Issues

1. Must public performance royalties be paid for and to whom?
2. Can users change their streaming selection once chosen and if so how to prevent other users hijacking their chosen selections once engaged?
3. Internet radio stations currently follow an ad-hoc development strategy. Some have introduced subscriber fees whilst others limit demand simply by cutting off the ability to connect once overloaded. Would such a device require the manufacturer to engage in a long term process of pushing along industry restructuring? That would be to encourage uniform connection standards and network alliance subscription packages being made available to subscribers. Network alliances are likely to be especially valuable for foreign language learners of English and Spanish, where multiple regional variations would encourage one subscription price for access to multiple "talk and news" broadcasts across a suitable range of countries. The same structural network principles would apply to all music genres that do celebrate regional variations. The long term move from currently largely free to subscription based access to Internet Radio stations is

likely to be of benefit to not only the capital investment projects of the radio stations but also of benefit to individuals provided there is enough flexibility in cross-network subscription package components.

4. The software developed for such kiosks would have to be able to cope with a variety of streaming formats and player types, although Windows Mediaplayer and Realnetworks Realplayer are the established industry standards. While touch-screen GUI design is well established, writing the software to work seamlessly with a large variety of different Internet radio stations would however need careful planning. Software updates would of course be easily managed since the device is inherently an "always-on" broadband device.

## Long-term competition

The long-term threat to such a device is DRM. This is Digital Radio Mundial and NOT Digital Rights Management which shares the same acronym. However the DRM standard appears to be a hindered in the implementation because of equipment costs for radio stations (similar in context to the delay of HDTV - High Definition Television). It would however provide a cheaper access alternative to broadband. If radio stations can digitally broadcast to reach a global audience (International DAB - Digital Audio Broadcast) then broadband access to international radio stations would be under competitive threat. However it should be noted that the ability to pick up such stations on digital car radios would be the most exciting potential application of the DRM technology. Also the restrictive capacity of available wireless frequencies will certainly limit the full development potential of this competition both in terms of radio station choice and the broadcast quality achievable.

## Conclusion

The TIRK device has a long-term profitable implementation profile, bringing existing home-based Internet Radio entertainment into bars, pubs and clubs. Royalties licensing may or may not be an immediate issue, and in the short-term perhaps an avoidable concern depending on the proposed public location in which the device is to be used. The extent to that this issue is avoidable also relates to the long term challenge for an industry restructuring in this sector to create Internet radio stations operating within online network alliances. This would allow both private individuals and Radio Internet Kiosk holders to subscribe to more effective services. The TIRK device may also have an unforeseen sales potential amongst certain learning environments (language colleges) or even in the home for private individuals. Those individual wanting at home to entertain guests yet avoid the technical concerns of running an Internet connection or maintaining a home computer.

As a layman who browses in here from time to time,   I am amazed at the negative reactions over new ideas -- "if it doesn't fit the proven model, it can't possibly work."

Such an attitude is reminiscent of a recent support call - my internet DSL line went down and I called to report it.  An offshore call center person said "It is not possible.   No problem has been reported."   When I said "I am reporting the problem" - circular reasoning began.

What little I know of radio -- I **do** know that when broadcasting began, it was experimental. People tried things that worked and others that didn't. The same happened with televison. Brooks and Marsh were very quick to point out old 1940s TV shows with concepts that fell flat. The same with FM radio - some formulas worked and others flopped. The internet is no different.

I think it came to a point - where radio seems to be locked in a conservative framework -- several months back -- when someone said LPFM will fail, because it doesn't track in "the book". My response is - while LPFM does not have the scientific studies that the mainstream broadcast world has, its commercial underwriters don't care about "the book". If Louie's Sub Shop underwrites the high school football game at a cost of $150 and the spots yield him $400 in extra business that night, it works, regardless of what Arbitron says or doesn't say.

I guess I'm amazed, because the Internet is a "wild west" medium, and I would think that broadcasting - with its long, rich history of not being afraid to try new things - would have been pioneering there, rather than running scared and away from it for the first several years of its existence.

Eh?..Speak up laddie..It must be old age...I can fall back easily, but the
spring forward gets a bit harder every year.

mike

And just to complicate things, as if they are not already sufficiently
complicated (e.g. the Navajos keep Daylight Savings but the Hopis,

whose reservation they surround, go with the rest of Arizona and don't
and the most likely medium wave DX catch in Arizona is Navajo) the
countries in the Southern Hemisphere which have summer time are going
OFF summer time.

And then there's Israel where the exact dates of summer time are a
struggle between the orthodox, who feel that summer time encourages
desecretation of the Sabbath on Saturday night and the secular who
feel that summer time conserves fuel.

It seems more likely that people would only listen to WBZ in their
cars (and not the office) because it's a rip-and-read all-news channel.
They like the headlines and traffic reports on the drive to work,
but when they get to the office they want some music.  (Or anything else
besides a constant repetition of headlines what they aleady heard.)

Well...unless you're in Indiana, Arizona or Hawaii....then the time REALLY
gets confusing...

Indiana had a chance to adopt DST and join the rest of the world this year,
but for other reasons the Indiana General Assembly decided to not meet and
vote on anything this year, allowing over 300 Bills to die of old age.

Indiana - We're 46th in SAT's, 46th in # of college grads, and we suck.

The station with the longest #1 run in the US, KGO in San Francisco, averages 50 to 70 KGO's an hour. It is part of thier success.

>
> I've called into both and BEGGED them to go easy on the self-promotional

You may know it. You are interested enough to visit an off the beaten path news group about radio. Most people don�t remember what they listened to... especially since this country has a tradition of giving call letters to staitons instead of names.

>  Deaf ears....all
> deaf.  Someone told me they do that so we don't forget in case the ratings
> people call us.

Ratings people do not take the ratins data on the phone.

>
> When the rating company called to ask me what station I listened to, I
> told
> her I liked BBC-2 better than BBC-4, but listened to both.

That was some poll, probably done by an advertiser on thier own. Radio ratings are not done on the phone. And radio ratings never, ever, ask about a "favorite" station.

> Broadcasters in the USA have killed radio and TV.  Remember when NAB used
> to limit the spam to 10 minutes an hour with actual PROGRAMMING for 50
> minutes?  We'll never see that, again.....

You will never see that again because you never saw it before. The NAB did not limit ad time per hour. The FCC would review your license renewal application back when licenses were renewed every three years if you went over 18 minutes an hour, and the voluntary NAB code also recommended 18.

Only in the early days of FM growth (late 60's to mid 70's) did FMs on their own try to do 10 minutes, more or less. On the other hand, in the fondly remembered glory days of Top 40 AM, stations frequently ran 18 minutes, with 6 or 7 breaks an hour being common.

Hey, buy a carton of Cokes. I'll betcha the carton has "Coke" and "Coca Cola" multiple times on every can and all over the carton. Guess why.

When the broadcaster doesn't know what is going on with current technology,
it doesn't bode well for new technology.  A snippet from that page:

=================================================================
What does it mean that 98.1 KING FM is broadcasting in HD Radio=3F Technology?

For those with digital receivers, the noise and interference that cause the
static, hiss, pops, and fades heard on today's analog radios will be
virtually eliminated.
=================================================================

There is no static, hiss, or pops on FM radio.  Fading (which includes loss
of stereo) is the only artifact of a reduced-quality FM signal.

Hello folks,

We invite you to visit our worldwide broadcast database:

http://www.broadcastdb.com/

If you haven't seen it yet, it's a database of live radios and TV
stations broadcasting from all over the world.

Feel free to submit your stations url's and live streams.

Regards,

broadcastdb.com

Arizona stayed on standard time to placate the drive-in theater
owners.  The drive-ins are mostly gone, but the inconvenience remains.

I am looking for either LP or tape of some old Musak music, (sting orchestra
with horns etc) from the 50's or 60's for a production piece. Or some info
where I might be able to glom on to some, would appreciate any info,
and thanks for listening!

So what's all the fuss at Clear Channel about suddenly providing 40-50 minutes per hour of commercial-free content, then?

It's not a new concept.

Our radio vs the BBC is such a clear case of capitalism NOT being the best basis on which to arrange some aspects of society that I just suddenly conceived the fond hope that some of you out there might be moved by this example to question the American truism that "business does it best".

Once you have actually entertained this heterodox idea, you might try looking around to see other areas in which letting business control everything has turned out to be a bad idea.

By such moments of individual enlightenment is progress slowly made.

Leonard

Back in 1969, when I was first getting into radio, I heard an aircheck from KGB San Diego.  It was put together (I believe) as an entry for the "Gavin Station of the Year."

I listened to it so many times, I can still recite it... all the way up to Bobby Ocean giving away the big prize, over $8,000 cash, to a woman who answered her phone, "I listen to double cash KGB" and whose husband had just taken a large pay cut to go into teaching.  She was the perfect contest winner.

This was one incredible radio station - especially to me, working in Fall River, MA at the time.

I'm looking for someone who might have a copy today or knows of a copy online.  I have no idea where mine went.

Geoff Fox

For sale:

(The "Radio Crazy" is baaaaakkkkk!) Hi!

Partial interest in new low power TV station license to service Rehoboth Beach, Delaware. Channel 59, 20,000 watts ERP. I am 100 percent owner of the CP. It expires May 5, 2007 so sufficient time to build.

Joint venture: (Yopu venture out and go to the JOINT!) Ha! There is an element of risk. You could lose all or part of your investment. Consider yourself fairly warned. Having said that, this is a nice situation. Rehoboth Beach is a famous resort city on the ocean. While the Winter (census 2000)population is only 1,495 they get over 2.7 million visitors a year!

Condos on the beach go for $995,000!

Active or inactive investors with at least $10,000 each are welcome.

Tel: (478)741-1710 in Macon, GA. Please feel free to call anytime. Do not block your caller ID data as the call will not go thru. I respect your privacy and will never call a second time if you indicate a lack of interest after your first call.

73,

Meyer Gottesman, W6GIV

Plus, it's worth noting, both Indiana (as was previously noted) and Arizona are

the westernmost states in their time zones. Because of this, the sun is already late setting, so why aggrevate the problem by making it set (and rise) an hour later, even? And Hawaii, being so close to the equator, doesn't really have long days, anyway, so there's not much point in "saving" the evening hour by advancing the clocks, only to lose it in the mornings.

there's always room for analog :-)
sadly I'm in NYC. Stations here, those that ever had
analog - wouldn't give you the parsely off their fish.

thanks
bill

actually, DST *is* an inconvenience. I lived in places that had it. it was
hard enough getting up in the dead of winter to go to school, but having to
do so an hour earlier because some twit says we have to set the clocks
back?

the DST problem is a carry over from WWII. it should have been abolished
once the war was over.

Geoff ...

<<Back in 1969, when I was first getting into radio, I heard an aircheck from KGB San Diego. It was put together (I believe) as an entry for the "Gavin Station of the Year."

I listened to it so many times, I can still recite it... all the way up to Bobby Ocean giving away the big prize, over $8,000 cash, to a woman who answered her phone, "I listen to double cash KGB" and whose husband had just taken a large pay cut to go into teaching. She was the perfect contest winner.

This was one incredible radio station - especially to me, working in Fall River, MA at the time.

I'm looking for someone who might have a copy today or knows of a copy online. I have no idea where mine went.>>

Have you tried Ed Brouder's www.manfrommars.com site? He has several KGB airchecks including some from 1969 or thereabouts.

Lee

No, if the signal to noise ratio is that low, there *is* no usable signal
at all, and what you hear is the amplification of "nothing"...basically
the same thing you hear when you tune to a spot where no station exists.

Good God! I have been in the business for 35 years and of all the stations I've ever worked at NO ONE has ever asked about KRUX! This was a station so poorly listened to, we couldn't give away tickets in contests.

Yes. But I thought I'd bought off everyone who knew.

You are confused; DST long predates the War.  New York started
observing DST in 1921; Chicago in 1920.  Denver started in 1920, but
stopped two years later.

Thanks Lee.

I have found one from 1969 which could be the aircheck.  I just wrote
to Ed to ask for some specifics.

True. If the signal fades, eventually you'll lose reception of *any* type of radio transmission. AM, FM and digital simply die different deaths, viz-

AM - programme volume decreases and gradually disappears into noise.
FM - noise increases and gradually overwhelms programme.
Digital - nothing noticeable at all at first, then screetches and yelps and suddenly disappears altogether.

Rod.

This is an old idea, the Jukebox companies have had this in the market for several years now.
Not much interest in the Live media, most applications use the Remote Music Download to update the box and tailor its local stores to the music being played in that location.

And it's not a "fuss."  It's simply worthy of notice in the trade and, to a
minor degree, of interest to the general press.

I Stand corrected on that. I thought the feds instituted it during WWII to
increase productivity for the war effort

860. In addition to so many other signs of piety, they are also persecuted, which is the best sign of piety.

861. The Church is in an excellent state when it is sustained by God only.

862. The Church has always been attacked by opposite errors, but perhaps

never at the same time, as now. And if she suffer more because of the multiplicity of errors, she derives this advantage from it, that they destroy each other.

She complains of both, but far more of the Calvinists, because of the schism.

It is certain that many of the two opposite sects are deceived. They must be disillusioned.

Faith embraces many truths which seem to contradict each other. There is a time to laugh, and time to weep, etc. Responde. Ne respondeas,215 etc.

The source of this is the union of the two natures in Jesus Christ; and also the two worlds (the creation of a new heaven and a new earth; a new life and a new death; all things double, and the same names remaining); and finally the two natures that are in the righteous (for they are the two worlds, and a member and image of Jesus Christ. And thus all the names suit them: righteous, yet sinners; dead, yet living; living, yet dead; elect, yet outcast, etc.).

There are then a great number of truths, both of faith and of morality, which seem contradictory and which all hold good together in a wonderful system. The source of all

Just like Ted FM here in Columbus, however with me, it is listen to one or
two songs in a row, then change the channel..

Everything old is new again. In 1968, there were plenty of AM stations playing the Rolling Stones right after Bobby Goldsboro. The format was called "Top 40."

And it's not a "fuss."  It's simply worthy of notice in the trade and, to a
minor degree, of interest to the general press.

But doesn't the "hour earlier" occur only for one day? The rest of the time -- or at least until DST goes back to Standard Time -- is calculated the same. The length of actual daylight certainly doesn't change one way or the other.

A trivia question for you:

Which state is located closest to the equator? Hawaii or Florida?

..
..
..
..
..
..
..
..
..
..
..

Hawaii, but only by 3 or 4 degrees latitude ... or about 150 miles.

The sunrise and sunset times for Honolulu and Miami are not as far apart as you otherwise might imagine. On Dec. 21, 2004, the respective sunrise/sunset times were:

Honolulu: 7:05 a.m. & 5:55 p.m.

Miami: 7:03 a.m. & 5:35 p.m.

Arizona, Hawaii and 3 territories do not observe the DST change over - they are on winter or standard time all year long.  Indiana has it's own crazy patchwork that allows many counties to remain on standard time, a few to use summer time year-round and others to use the more widely accepted DST changeover.  For residents of the U.S. the decision to use DST is a state and local municipality rights issue, so I would not expect complete uniformity for a long time.

The principal modern day benefit of winter time is to allow children to wait for the morning bus or walk to school in something other than total darkness.  Now that we have had the DST changeover, students in mid-atlantic states are once again waiting for the morning bus or walking in the dark.  It would make so much more sense to just stay on one standard year-round.  Alaskans have coped with extreme changes in daylight and darkness - I think those of us in more southern locations could handle the sun coming up at 5:30AM.

Everything old is new again. In 1968, there were plenty of AM stations playing the Rolling Stones right after Bobby Goldsboro. The format was called "Top 40."

Howard

Hell, I've been doing that for a couple of years now.  Once you shed your mental training about how everything has to flow together to create a continuous stream of wallpaper sound, it can be interesting and challenging.  Two completely different songs back to back can create some cool sonic juxtapositions.

Music is like a big banquet table piled high with all kinds of yummy goodies, but most people restrict themselves to just a nibble here and there.  The radio industry as it exists today is going to make sure you only get an occasional taste of what's really out there.  I'm inviting you all to shed your musical anorexia and jump in and pig out.

[From radiolondon.co.uk - this one was posted "very early in April" - Mike]

"Radio London's correspondent in California, Ranny Teebus, sent us this report about a ship destined to go into the history books of offshore radio... Ranny's contact states, "We really felt an affinity with the original Radio London in the UK - the 60s music and the jingles. We want to bring back the "British Invasion" in radio terms at least!

Sadly though, we couldn't just choose a station name, what with all the regulations and whatever over here. We wanted to use "Wonderful Radio London" but the FCC (Federal Communicator Committee) wouldn't let us use WRL as you now aren't allowed to use just three-letter callsigns any more. This really isn't fair as couple years ago after being forced to use KKHJ, station KHJ were allowed to go back to using their three-letter callsign. As we would have had to add a 'W' to make it WWRL, we still weren't allowed to use it, as there used to be a station by that name years ago, in LA."

After Radio London's further investigation, it transpires that the quote came from Robert E Lee, Station Manager and ex-Programme Director at WLBH, on the outskirts of LA...Now we have a ship that can be made ocean-going in about a couple months or so, therefore we can go anywhere in America with our broadcasts - well, except on land!

"Although one of the big satellite radio stations here is interested in taking us, and I can't say whether it's XM or Sirius at this stage, there is no point in going on air if people can't hear you in the car and anywhere in the home.

With the prospect that the listener can now buy a satellite receiver that will get us in the car, we're also excited about the prospect of going on satellite because people can still hear us also anywhere in their house if they turn the volume up loud enough. At this time of year it's not too hot or cold in most of the US, so we are hoping that car users will have their windows down, so attracting other road users to our station. While it is true that more new cars in the US are being fitted with satellite radio, and as I said, you can receive the stations also with a home satellite hi-fi unit, we feel that AM still has a long way to go. This is definitely where the ship comes in. We are going to take the ship around the US coast so that people can get a flavour of what we have to offer.

"Because of the importance of the station in renewing interest in 60s music, the FCC have allowed us 500kW in certain parts of the US on AM from the ship, but that would be a dangerous undertaking, and rather hazardous for the crew and DJs because of the close proximity to the antenna being on the ship and all. Although there is new antenna technology available that could possibly do this from a ship, we reckon we'll fall back to using 50kW to 150kW with a conventional antenna to be on the safe side.

"As the FCC wouldn't allow us to use WWRL, we decided on a station name of WWDA as that represents the main thrust really of what we're about - the WDA part means "World Digital Awareness". The way forward is digital, even on AM (and you only have to look on the internet to find out the details of, for instance the DRM system). Heck even the British BBC are interested in this technology for their World Service, so that must say something! We'll be adding digital real soon, and that will give us a big boost in listeners!"

Ranny then asked Robert about the picture he'd provided of the ship at the centre of the project. "The Sea Bird is able to travel under her own power and what rust there is can be simply sorted out. Heck, it helps in providing good contact with the sea as a good earth for the transmitter's antenna!" he said.

But what about the "388" painted on the side? Apparently the FCC has already given the company a little-used frequency of 770kHz throughout the US. Robert says, "They have kindly given us that frequency and as a definite tribute to Radio London in the UK, we felt that the frequency should be in wavelength terms, so we've had lots of jingles prepared to include this. The frequency is clear in many places on the US coast. We have to use low power in some locations for the month or so that we'll be there, about 1kW, but some other places we'll be up to at least 100kW. It's great to be able to use the same frequency on all our promotional material wherever we are!"

( Photo of the new "World Digital Awareness" ship and story at http://radiolondon.co.uk/kneesflashes/happenings/current/hapcurr.html )

[I found this apposite quote elsewhere - "The first of April is the day we remember what we are the other 364 days of the year -- Mark Twain" )

Just like Ted FM here in Columbus, however with me, it is listen to one or
two songs in a row, then change the channel..

geoff

The three territories are in the topics, where days do not vary in length much, so it's natural they would not go on DST.

Maybe so, but it's something you could probably use to expand your
horizons.....and you might even learn how to spell, too.

The US use of DST actually had its start in 1918, during WWI. Germany
first instituted DST in 1916 for the same reason that the US would
later do so: to increase the length of the workday that could be lit
by sunlight. Remember that this was at a time when electricity was not
yet in widespread use and sunlight still provided working light in
many buildings and factories.

Press Release
April 5, 2005

Hell Unleashed: New Radio Free Satan Premieres

The re-launch of Radio Free Satan, appropriately descending on the=20
weekend of the Pope's death, is back in action, and with plenty of=20
surprises.

The world's evilest internet radio station returns with a whole new=20
look, new management, and plenty of new programming!

Tune in at http://www.radiofreesatan.com for a fresh stream of=20
around-the-clock programming, professionally produced shows, and the=20
wickedest personalities on the planet. Best of all, anyone with an=20
internet connection can hear Radio Free Satan for free without buying=20
extra hardware or paying for expensive subscriptions.

Hell ain't a bad place to be when you're listening to Radio Free Satan!=20
Stay tuned for the best music from every genre and every era -- vintage=20
metal, rockabilly, gothic, swing/big band, punk rock, classical,=20
industrial -- plus classic comedy, old-time radio serials, and mind=20
blowing talk and perspectives from the most outspoken minds of the=20
carnal world.

Visit the new website at www.radiofreesatan.com for information on our=20
DJs, shows, message board, e-list, and more. Plus, new and exciting=20
plans for the future of RFS, including contests, podcasting, and other=20
ways to enjoy your Radio Free Satan.

For more info, check out--
http://www.radiofreesatan.com
Email: shane@evilnow.com
Phone: 219-931-9300
--=20
Ever Forward!

And it's not a "fuss."  It's simply worthy of notice in the trade and, to a
minor degree, of interest to the general press.

>>I thought the feds instituted it during WWII to increase productivity for
the war effort<<

It was around before WWII, as others have noted, but it was year-round
during the war ("Eastern War Time," etc.).

Try any shop that deals in used vinyl.
Your public library may carry string orchestra recordings, too.

But make sure you respect the appropropriate copyrights.

If NPR's nothing but left wing crap, why does the nutcase left scream
about it selling out to evil capitalist corporate AmeriKKKa and kissing
George Bush's butt?

Seems to me that any organization that gets a negative response from
the lunatics on both the left and the right has to be doing something
right--and NPR's drive time news shows are now the second and third
most listened to national radio programs.  Only the bloated dope addict
has more listeners.

A trivia question for you:

Which state is located closest to the equator? Hawaii or Florida?

..
..
..
..
..
..
..
..
..
..
..

Hawaii, but only by 3 or 4 degrees latitude ... or about 150 miles.

The sunrise and sunset times for Honolulu and Miami are not as far apart as you otherwise might imagine. On Dec. 21, 2004, the respective sunrise/sunset times were:

Honolulu: 7:05 a.m. & 5:55 p.m.

Miami: 7:03 a.m. & 5:35 p.m.

*Played* Wagner.  He's dead.

And technically, he wasn't NPR.  His show is syndicated by WCLV, a
commercial classical music station in Cleveland.  Yes, "is."  He'll
live forever on the radio.

The point being the U.S. should adopt daylight standard time and stick with it year round. I see no downside. There would be less confusion in spring and autumn and most kids would be able to wait for busses or walk to school in the light.

BROADCASTDB Live Radio : Just Added

http://www.broadcastdb.com/

More than 4110 live radios and 536 live televisions.
More than 4700 radio links ! and Webcams !

New this week :

Live Radios and TV:

PLAYBOY TV UK- Adult - PLAYBOY TV - UK
WMSL Radio 64k - Great Sings 80's, 90's / UK
PGM Radio - Christian, Oldies - Miami / FL
New Dimensions - Conversations, Metaphysics -
Australian Broadcasting - Conversations, Metaphysics -Australia
Indie-Connections Radio - Pop, Rock, Alternative
Passion Radio - Classic, Dance - UK
Pro FM - 24/7 80's - 90's danceclassics & Todays Dancehits
FM TANGO - Tango 98.5 FM - Rosario
Otto's Baroque Musick - Broadcasting Baroque music 24/7
Radio ENA - Australia's first 24 hour FM Greek radio station.
PJFM RADIO - Top 40, mix of music. Pjfm radio plays all kinds of the
latest music some which is not
in the shops!!
RADIO BRIGANTIA - News, music, pop, various, portuguese
Radio Dashuria - The best Albanian Radio - Live from Prishtina
K104 Radio - K104 Radio - 104.7 FM - Todays Hit Music - Poughkeepsie,
NY
Hiway Radio - 24/7 Indpenedent music of all genres.

Oh, no you don't!

I hate having dinner while the sun is still up.

If we're going to change, let's have standard time all year.

Yes - especially if by "FM radio" you include the standard broadcast stereo
imlementation - where the stereo difference signal gets progressively
noisier, meaning many radios include a force MONO button, as the stereo sum
(i.e. mono audio) "lasts longer" - and clear mono may be preferable to poor
stereo?
```

I realise this is because the difference signal is carried using additional modulation techniques, but when talking about "FM" radio as a consumer product, most people mean FM VHF stereo as broadcast, rather than a purely FM modulation technique?

Steve

They have it backwards, anyway.  Get up earlier in the summer and

have an extra hour then, rather than a cold, dark hour on winter
mornings.

They actually tried that in 1974, in the midst of one of the "energy crises".  I distinctly remember being an elementary school student (second grade, IIRC) when that happened, and having to walk to school in the dark.  It actually did cause a statistical increase in the number of deaths of school-age children in the morning, so for once government did the right thing and decided not to make it a permanent change to year-round DST.

April 9, 2005

Craig, Colorado

High winds ahead of a major storm expected to move in over the weekend knocked down a radio tower Friday, disrupting television and radio stations and police communications in Moffat County.

Police communications had to be switched to alternate channels after the tower on the north side of town was blown down about 2 p.m., said Ruth Wade, communications supervisor with the Colorado State Patrol.
Wind gusts of up to 80 mph were reported in the area, Wade said.

"It is still blowing pretty steady," she said early Friday evening.

Crews were repairing the steel, three-legged tower, but Wade did not know when they would finish.

The spring storm was expected to drop to 2 feet of snow along the foothills of the Front Range late Saturday night and Sunday.

And that's the problem....we "lefties" know that there are two sides to every story, a job which NPR does extremely well (and results in charges from both radical ends of the political spectrum that they've gone, or embrace, the "dark side"). In this regard, I fear, the right has managed to repeat this misrepresentation often enough that it's taken root as an urban legend.

Remember what Himmler said....

| Karl Haas is neither left nor right.  He's dead, Scott.
|
| But he's not NPR, anyway.

Indeed...as Steve might point out, Karl Haas used to work for WCLV, the for-profit classical station in Cleveland.  The shows heard now (and just prior to his death) are repeats, as Dr Haas retired several years ago, figuring he'd pretty much done a treatment of every sort on the music played for the program.

There is a fascinating collection of assorted BBC World Service publicity material and personal photographs and documents from c1950-2000 at

http://www.richardsonmedia.co.uk/Bushlog.html

I found this article about BBC Monitoring:

>From "Voice for the World" booklet, published by BBC World Service, 1988.

LISTENING TO OTHERS

British national newspapers love to carry exclusive stories - and to boast about them. If BBC Monitoring were a national newspaper, the rest of Fleet Street would be in a constant state of envy.

Whether it is Mr Gorbachev appealing for calm in the Armenian disturbances, the shooting down of an Afghan airline by Mujahedin rebels, a coup in Burundi, or the release of an Ulster nurse by Sudanese guerrillas, it is the monitoring service which broke the news to the world.

The examples are random and relate only to the recent past. BBC Monitoring has quietly sustained that kind of record since its inception just before World War Two.

It has many milestones in its history, announcing the news that is flashed around the world: Hitler's death in 1945; Nasser's nationalisation of the Suez Canal and the Hungarian uprising in 1956; the end of the Cuban missile crisis in 1962; the Russian invasion of Czechoslovakia in 1968; the declaration of martial law in Poland 13 years later.

Set up at the government's request to listen to the output of the world's radio stations, BBC Monitoring is based at Caversham Park in the Berkshire countryside, as it has been since 1943. Its receiving aerials and satellite dishes are sited four miles away at Crowsley Park.

In 1947, the service and its American equivalent, the Foreign Broadcasting Information Service, reached a formal agreement for the complete exchange of monitored material. Effectively, the BBC and the Americans divide the world between them, the BBC concentrating on Europe, the Middle East and Africa, with a unit in Kenya.

At its wartime peak, BBC Monitoring needed 1,000 people, Today it has half that number, which includes a substantial number of multilingual monitors who can switch from language to language as the need arises.

The service's workload is staggering. Monitors, operating shifts around the clock, listen to some 200 hours of broadcasting a day in about 35 languages from some 50 countries. Another 300 hours of monitoring is provided daily by about 25 news agencies. Altogether, with the American input, news and information from about 130 countries is handled.

It all adds up to 3/4-miIlion words, which have to be sifted by editorial staff who produce
a 24-hour newsfile and a printed summary of world broadcasts.

The daily newsfile of up to 12,000 words, is teleprinted to consumers in the BBC, other news organisations and government departments. When martial law was declared in Poland in 1981; 16 international news agencies and newspapers and radio stations in Europe, Asia and the USA subscribed to the Polish file. Other 'best-sellers' have been broadcasts from Argentina during the Falklands War, Afghanistan since Soviet intervention and Iran, particularly during the US hostage crisis.

The summary of world broadcasts - based on the same information as the newsfile but in greater detail - runs to 100,000 words a day. It is published six days a week in four parts covering the USSR; East Europe; the Far East; and the Middle East, Africa and Latin America

Thousands of copies are printed and posted daily or dispatched electronically to subscribers all over the world including Nexis, the world's biggest database in Dayton, Ohio.

To meet the constant increase in broadcasting output, a �16 million five-year modernisation plan began in 1985, underwritten by the government. It included a major building programme, extensive engineering improvements at Crowsley Park, and the computerisation of the service.

Two of four 11-metre satellite dishes agreed under the plan have been installed. These are steerable and are powerful enough to access signals from satellite television transmissions.

'The trend is towards TV as the prime source of information,' says Eric Bowman, the General Manager of BBC Monitoring. 'We see about 40 different channels, but at the moment we're only watching Soviet and Libyan TV on a regular basis. We won't have our full TV set-up until early 1989.'

That is when the main-frame computer, linked to an electronic storage and distribution system with 180 visual display units, is expected to come into service. 'It will simplify transmission and editing and speed things up,' says Eric Bowman. 'In the meantime it's people and typewriters as usual.'

I think the ARRL needs all the help they can get.  Only 1/6 of all hams are
members so they lack credibility with the FCC.  They need to be more
inclusive and this is one way of doing it.

```

> Keep Farmers Informed

This sounds like Urban legend. KFI was founded by the leading Cadillac and Packard dealer of LA, and was anything but a farm station save a brief period early int he morning. I thought the calls, like many early ones, were assigned in order.

At least one of my local fm radio stations says that their radio station "is now broadcasing in high-definition" on their radio frequency.

So what I need to know now is

Does anyone know where I can buy a high-definition radio?

and how much do they cost?

Tommy Vance
11th July 1943 - 6th March 2005

Richard Anthony Crispian Francis Prew Hope-Weston was born in Oxford but ran away to sea when he was 16 years old. He had been brought up on the rather staid British broadcasting of the fifties and, like a number of his contemporaries, he fell in love with the brash sound of American commercial radio the moment he heard it. In his case, it was while working as a cabin boy in the merchant navy.

Abbreviating his name to "Rick West", he tried to find work on American radio, taking whatever shifts he could, even if it meant working for free. He studied his craft and was constantly learning from his colleagues. He taught himself the deliberate delivery of the professional broadcaster where every word counts. A job on KOL Seattle necessitated another name change. He was offered a show - but only if he called himself "Tommy Vance". The programme had originally been intended for another presenter who had pulled out of the deal at the last moment. Unfortunately this change of heart took place after the jingles had been recorded. The other presenter was called Tommy Vance. The jingles and pre-launch publicity could not go to waste so "Rick West" became "Tommy Vance". From there he moved to the legendary KHJ Los Angeles, the home of the boss jocks.

KHJ was one of the most successful and influential Top 40 stations of the era and California in 1965 was a great place to be. Unfortunately America was then involved in a war in Vietnam and, when Tommy got his draft papers for the US Army, he decided it was time to head back to the UK. British musician Ian Whitcomb lent him the fare and just before Christmas Tommy knocked on the door of Caroline House in London. No programme controller was going to pass up on the opportunity to employ a KHJ boss jock and Caroline's Bill Hearne was no exception. On 3rd January 1966 Tommy presented his first show on Caroline South.

Tommy had acquired something of a mid-Atlantic accent while living in America. He had also acquired a wife. She was not best pleased with the idea that her husband was going to be on a ship two weeks out of three. It would mean she would be stuck in an unfamiliar city on her own. So Tommy left Caroline after a few months and moved to Radio Luxembourg.

The marriage did not last so, when Caroline's Ronan O'Rahilly suggested Tommy should return to the ship, there was nothing to stop him. In December 1966 he rejoined Radio Caroline South.

During the summer of 1967 it became apparent that the government was going to legislate against the offshore stations. The pirates desperately tried to find loop-holes in the new law so that they could remain on the air. Tommy heard a rumour that Philip Birch, boss of Radio London, was negotiating to move his station to France. If this was going to happen, Tommy wanted to be a part of it. In July 1967 he transferred to Radio London. Unfortunately Big L failed to find a base on the continent. Rather than break the new law, it chose to close down on 14th August so Tommy's stay with the station was brief.

Tommy was one of the initial team of disc-jockeys signed up for the BBC's new Radio One and co-hosted Top Gear with John Peel. When the programme was given to Peel to present solo, Tommy continued to host the occasional show for the station but his very distinctive voice was also heard on offshore radio on the numerous commercials running on Radio Caroline for Major Minor Records. He appeared on various television shows and was the voice of dozens of advertisements.

Together with his good friends Dave Cash and Kenny Everett he presented shows for Radio Monte Carlo International and all three of them were part of the launch team for London's Capital Radio in 1973. Tommy presented the morning show with Joan Shenton on the station's first programme schedule but during his time with Capital he also hosted commercial radio's first reggae show and, at a time when punk was being vilified by the press, he carried out the first in-depth interview with Johnny Rotten of the Sex Pistols.

Never one to sit still, Tommy and a couple of partners opened one of London's top commercial recording studios, Silk Sound, later joined by The Bridge. His voice was much in demand for advertising work and he presented a long running rock show on Radio One as well as a daily music and chat programme for BFBS. For many years he was also the voice of Radio One's Top Forty. When the BBC launched Greater London Radio in 1988, Tommy hosted the afternoon drive time show - a heady mixture of "rock and rolling news". He was also part of the launch team for Virgin Radio and presented rock videos on VH1.

Tommy liked to give the impression that he was just a hack voice-over man, cynically selling whatever was on the script. (He dismissively referred to himself a "voice on legs".) In truth, he did have an amazing voice and the ability to sell almost anything but he was much more than that. He loved his music, he enjoyed his broadcasting and he had a passion for life. When he moved to Spain a couple of year ago, it was with the intention of a gentle semi-retirement. But it was not long before he was back on the air playing music for the tourists and ex-pats on the Costa del Sol's Spectrum FM. He just could not sit back and take it easy. It was not in his nature. He came back to Britain and threw himself into work again, doing commercials, appearing on television and returning to Virgin to present a weekly show on their DAB and internet offshoot, Virgin Classic Rock.

Fans of his shows on VH1, Radio One and Virgin will remember Tommy as the ultimate rock jock. He certainly did love his rock but his taste in music was much wider than that. Roots reggae was a particular passion. He was a skilled interviewer as listeners to his GLR and BFBS shows can testify. His voice was in demand for commercials over four decades. Tommy could do it all. He was the consummate broadcasting professional with an incomparable knowledge and a glorious voice. The radio world is a poorer place for his passing.

Thoughts on the demise of the former BBC/DW Caribbean Relay Station...

Websites with details of relay station:
http://www.tdp.info/atg.html
http://www.transmitter.be/mar-b6122.html

-=-=-=-=-=-=-=-=-=-=-=-=
Possible reasons for shutdown
-=-=-=-=-=-=-=-=-=-=-=-=

1. Marconi is totally out of the SW transmitter business, so transmitter repair over the long run is a gamble.

2. The B6122 transmitters were not very efficient, electrically -- 60% vs the commonplace 80% efficiency with most modern transmitters.

3. Two modern ALLISS modules could replace the existing Caribbean Relay station.
(ALLISS module info :
http://www-db.thomcastcom.ext.coltfrance.com/db/thomcast/webdriver?MIval=V_Prod_Detail_b.html&F_ID=5&D_ID=1&P_ID=9)

4. There is extra capacity for SW transmission on the South American continent. On the South American continent hydropower is used to power radio broadcasting vs more costly diesel used in the Caribbean and South Atlantic.
HCJB (and TDF) could cover the Americas completely with their existing and spare SW transmission capacity.
Worst case scenario (1% probability) would require leasing the Russian Vladivostok-Kamchatka & Magadan relay stations, to meet transmission needs.

5. Because the US / Canada and Western Caribbean are not primary BBC/DW target areas, it becomes logical to sell the facility off so that it can be turned into an upmarket resort -- thus putting some Euros into cash strapped BBC/DW as well as VT-Merlin that operated the facility.

Try listening to http://www.bbc.co.uk/radio4/index.shtml?logo which
proves that quality terrestial radio is very much alive and well and
still, with no commercials.

Maybe they're strong enough in the Zanesville area and don't care how they
sound in Columbus.

"I'm not funny, I'm not pretty.
```

My whole reason for existence is that I'm a disc jockey.
My interest is in the music."

The man who started life in Oxford with no less than six names, ended it as someone so well known that he used only two initials - TV.

Richard Anthony Crispian Francis Prew Hope-Weston had gained his first radio experience in the US, with stations in Washington State, using the name Rick West until he joined KOL Seattle in 1964. As has been the case with numerous DJs when they change stations, he was then obliged to adopt a new persona, to make use of station jingles which had already been recorded in the name of Tommy Vance. From there, he went to California and KHJ, Los Angeles, where he became a star jock.

The threat of being drafted into the US army prompted a swift return to Britain. In January 1966, Tommy transferred from being a top DJ earning big bucks on KHJ, to being an unknown on Radio Caroline South, braving the North Sea for a meagre �18.50 a week. Although he said he relished a challenge, he described this sudden upheaval, which occurred within the space of about five days, as the biggest cultural shock of his life. The jingles (by the Johnny Mann Singers), which had been instrumental in changing his identity, came with him to England. Although he never officially changed identity by deed-poll, 'TV on radio' was a memorable catch-phrase and 'Tommy Vance' remained his name for the rest of his life.

Tommy tolerated three winter months aboard Caroline, had a stint on Radio Luxembourg, then came back to Caroline for another six months.

In July 1967, Radio London programme director Alan Keen persuaded Tommy to jump ship to the Galaxy. He was already a regular Big L listener, having become a fan of John Peel's 'Perfumed Garden', while aboard the Caroline ship Mi Amigo. (TV and Peelie later co-presented 'Top Gear' for the BBC.) Radio London was short-staffed, because so many of the DJs were opting to leave before the Marine Offences Bill came into effect in August. Tommy was persuaded to join because at the time, there were plans for Radio London to recommence broadcasting from the continent after August 14th. Management hopes were high for the station's future, but not all the DJs shared their optimism.

Although Tommy's stint on Radio London must have been the briefest in his long broadcasting career, his place in Big L history will always be remembered. He was the last DJ to join Radio London, presenting his first show the day he arrived aboard the ship - July 25th 1967. Tommy had the honour of presenting the final Fab 40 on August 6th. His last show (breakfast) was on August 7th and he left the Galaxy the following day. His voice, however, was heard on Radio London's final day. On August 14th, a pre-recorded 'Juicy Fruit Spectacular' was broadcast between 1330 and 1400, and at the end of the show Tommy (who co-hosted it with Lee Peters) said a personal farewell to his Big L audience.

Listening on shore to the close-down, Tommy said: "It was very sad because it was a part of your life. I was perpetually confused by the evolution of the medium in this country because I'd come from America, where radio was commonplace. It always struck me as terribly strange that if America had this proliferation of radio, why couldn't the UK have it?"

Of course, thanks to the influence of offshore radio, the UK eventually got a variety of radio stations, and Tommy was to work for many of them, including Radio One, Capital and Virgin. It's impossible to list everything in a career like Tommy's. He made an appearance in a Slade film and released several (unsuccessful) singles. His talents also took him into television; he hosted Top of the Pops, voiced many commercials and fronted the Friday Rock Show on VH1.

Tommy told us that people regularly presented him with copies of the final Fab 40, thinking that they were doing him a favour. But he did not really want to listen to it, as his one-and-only Big L chart presentation was not something he regarded as one of his finer broadcasting moments! The Fab 40 title was a misnomer, as Alan Keen had crammed a much larger number than 40 records into the final chart. Not surprisingly, the show overran by 22 minutes.

Tommy always enjoyed a party. He was present at our 35th Anniversary Offshore Reunion in August 2002. (His signature from the Guest Book, is below.) Sadly, a business commitment in Spain prevented him from attending the Radio London 40th Anniversary Reunion, which took place on February 26th 2005, less than a week before his untimely passing.

(Picture right: Tommy at the 35th Anniversary Offshore Reunion, 2002, with fellow broadcasting pioneers Johnnie Walker, Ronan O'Rahilly, Dave Lee Travis, Mark Sloane and Keith Skues.)

Students from Luxembourg, making a documentary about their country's famous radio station, arrived at the 2002 reunion and interviewed Duncan Johnson and Keith Skues. But Tommy, hiding behind his trademark dark glasses, kept well out of the way. He told us he did not want to talk to them, because he felt he had enjoyed a little too much to drink.

Perhaps Tommy's least-known (but nevertheless, very popular) role was that of 'The Thing That Ate Birmingham' from Kenny Everett's famous 'Moment Of Terror' promo, made while they were both working for London's Capital Radio. Never one to miss the opportunity of obtaining a special effect, the mischievous Kenny recorded the sound of Tommy burping. By adding an enormous amount of echo, Kenny enhanced the sound to create an audio monster. He frequently used 'The Thing that Ate Birmingham' in his space serial, Captain Kremmen.

Quotes are from Brian Long's book, 'The London Sound'.

Typical radio promotion gimick.

Here is an excerpt from Chuck Blore's future book showing how
things were done 'back then'

-----------------------

When High Fidelity was a big deal in records,
Gordon's stations were all Hi-Fi Radio."

"What made them Hi-Fi. Was that just a name?"

"Oh no. He always made it seem very special. And very real. When we began promoting "Hi-Fi is coming to radio" all the stations were told to back off the higher frequencies of the actual signal a little bit each day for two weeks.

Without anyone really noticing, at least that was the theory, the actual stations signal gradually became kind of dull, and duller. But

then, we had the big announcement ... `Ladies and Gentlemen. Welcome a
new millenia in radio broadcasting. This is K E L P HI-FI RADIO' and
with that we slapped all those frequency adjustments back to normal
and, Oh God! What a difference."

-------------------------

Don't believe 50% of what you hear on radio promos, the ignore the
remainder

:-) They probably cost more, sound worse, consume so much battery power that they have to be provided with a separate mains power supply (which isn't shown in the brochure of course), and will be enthusiastically advertised for at least two years before any of them actually appear in the shops, by which time you'll have forgotten why you were interested and spent your money on something much more worthwhile It won't be available as an option in the new car you're thinking of buying, and half the programmes will be transmitted in mono.

Rod.

Is this the same as "IBOC" digital radio ?  AIUI this is the US digital
radio system, where radio stations broadcast a digital carrier close to
their analogue one.  It is VERY different to the European DAB radio system
which is usually implemented in a different frequency band. (In the UK the
DAB system occupies Band III, whereas VHF FM occupies Band II)

Only car radios are out at the moment. JVC KD-SHX900 and Panasonic
CQ-CB9900U are just two that I know of off the top of my head. Boston
Acoustics will release the Receiver Radio HD in May, or so they say.
I expect that there will be a bunch of HD Radio receivers out by the
end of the year.

I am reporting the death of George E. McKay, Jr., on March 10, 2005, in Claremont, CA. George formed the McKay Dymek Company in 1975. One of its products was the AM-5 Hi-fi Tuner which, in rack mount with 500-ohm output, was used in hundreds of broadcast stations.

Another product was the DR-22/33 series digital triple-conversion all-wave receiver which continuously covered 50kHz to 29.7 mHz. Some were delivered under contract to the South Korean Navy. Used models are still traded on the Internet from time to time.

I was a boyhood friend of George from 7th grade==Ted Shireman

I'm trying to record radio being played via RealPlayer, but when I use the software OPD2d, it will save a file, but when I try to play the file I get this message from RealPlayerThis clip cannot be played, it contains unexpected data may be corrupt.

I've tried a few times. I have the latest version of all software, and am using Xp.Any clues on how I can solve this?

Someone recomended 'Set your sound card to record "What U Hear". Open any audio editor or Windows sound recorder, press record and play what you want to record.'

But there doesn't seem to be this option with this software.

Any suggestions?

thanks

Yeah it's "more stimulating talk radio" for the easily amused.

You likely should check if WTPG is running IBOC if it is, that's a
likely explanation of your problem.  Welcome to the new world of
digital AM that makes listening to other signals just about impossible.

It's more likely that they don't know about it.  Even if they're targeting only
the city
limits of Zanesville, it reduces the commercial value of the station (say they
want to
sell it someday) because it also reaches a vast market, or used to, between
Columbus and
Zanesville; a market that now can't hear them at all.

NOT a prime resort location.  Maybe it could be used for a golf
course, but I'd think any resort would have to be on a beach.

Even modern shortwave transmitting stations are hard to sell these
days.  I've heard of one which recently sold for about the same price
that people are paying for large 4-bedroom houses in my neighborhood
or a modest flat in London or Paris.

March 15, 2005
Mike Rogers

Over the next ten to twenty years there will be a revolution in broadcasting so drastic that I believe TV sets will virtually disappear in American homes within the next 25 years. The in-home AM/FM radio is already going the way of the 1950's short-wave, and within 15 years will become a curiosity.

After being slapped with several serious fines amounting to over $2.5

million dollars over the last ten years for profanity from the Nanny state under the guise of the FCC, Howard Stern is boasting that he will take his act to the future of radio broadcasting: Satellite radio and move to Sirius Satellite Radio beginning in January of 2006. Sirius is going to pay Howard Stern $500 million dollars over the span of five years. Great deal for Howard Stern? Most definitely. Good deal for Sirius Satellite Radio? Well, desperate people will do desperate things. But most of you folks already know this story. It's what Howard doesn't know (and that includes most people) that's going to hurt. The future of broadcasting is definitely not in satellites.

(snip)

For the FM radio stations, things look even worse. Many new cars are coming out in Japan that do not even have FM radio tuners in them. And why should they? The cars are all equipped with GPS and are soon to be Internet compatible. Most can already plug into radio via cell-phone. And the cell-phone providers are not lining themselves up with FM radio providers. They are setting up themselves with Broad-band and Internet stations. The AM stations' saving grace will be the traffic reports - but even that is "iffy" as GPS can do the same thing.

Recent surveys have shown that more and more people are gathering their news from the Internet. Younger people have no problem with this at all. The older generation who has the out-dated (and wasteful) habit of feeling like they need to read a newspaper or watch TV news will not change course. You cannot teach an old dog new tricks. But, this older generation, unfortunately, will be gone soon enough. And when they are, and the subscription numbers of newspapers hit rock bottom; the TV news viewer-ship continues to erode (and it has been eroding for the last 20 years across the board); and the conglomerates are no longer capable of justifying to sponsors spending millions on ads that no one sees, the entire mass media set-up we have been used to for the last 50 years will come crashing down. This is the assumption that TIVO has been working on, somewhat successfully, over these last five years. The problem for TIVO now is: With HDD DVD coming on the market, who needs to pay a monthly subscription to TIVO? I suspect that if you own TIVO stock, you had better sell now. Heck, think about it, any stock in any Big Media is a sure loser.

We now have Internet radio. I work in the music business. It is common knowledge among everyone in my field, that young people who want to hear new music, listen to Internet radio. No one listens to FM anymore. FM radio is beyond repair to the younger crowd as it has a very unfashionable and worthless image. The Internet radio stations are exciting and they are booming. It's just a matter of time, before Internet radio destroys FM radio for music lovers, be they Classical, Jazz, or even Country music, Rock, or Hip Hop fans. And it won't matter if we are talking about in the home or in the car.

In Japan, just about all the cellular phone companies are launching their own Internet accessible radio networks. Who needs to buy a $500 to $1200 dollar AM/FM CD player for the car when you can just plug your cell phone into your in-car CD/DVD player and be able to access literally thousands crystal clear Internet stations as well as down-loadable music from the Internet?

And, from what I understand, Internet TV is just around the corner. In fact, several business associates of mine are contemplating starting the worlds first 24-hour-a-day Internet TV News Network. How do they make money from it? Now that's the $64 million dollar question. But I can see making more money from that in twenty years than I can from how the traditional TV stations do it. The traditional stations are dinosaurs and most of them don't even know it yet.

Very soon, people won't need an AM/FM radio receiver. They won't need a TV screen. Newspapers are already on their last legs. Everyone already has a computer - No, everyone needs a computer. The computer will be able to do them all in one place. And back to satellite radio? Are you kidding, Howard Stern? You don't think that people are going to go out and actually spend a few hundred dollars to buy a satellite dish and tuner, plus pay monthly subscription fees, when they can most likely get your show pirated over the Internet for free do you?

The Internet is the key. Internet news is destroying the newspapers, and helping Big Media TV news destroy itself. Internet radio is here. Internet TV is just around the corner. HDD DVD is coming this year. And the beautiful part? No sponsors, no fees, no commercials. Some smart person is going to come up with, in short order, a revolutionary way to advertise too, and then it will be game over for Big Media.

So, Howard Stern, congrats on the $500 million from Sirius Satellite Radio.... Try to get the money up-front. And if you can, run like hell and don't look back.

For sale:

(The "Radio Crazy" is baaaaakkkkkk!) Hi!

Partial ownership in new LPTV station in very rich and nice Delaware beach resort city. Everyone knows of this place! When you contact me and ID yourself properly, I will gladly disclose the city of license.

I own the UHF low power TV construction permit (CP).

This is a joint venture and there is an element of risk. You could lose all or part of your investment. You heard it first here, kiddies! (grin).

Active or inactive investors with at least $10,000 each are welcome.

My tel. is: (478)741-1710 in Macon, GA. Call anytime day or night.

I live in an area with very bad reception both for normal radios and DAB
digital radio.

Is there anything you can attach to a normal or DAB radio to increase the
reception, if the radio doesn't have a built in aerial socket for an
external aerial.

Thanks

T

XM better rev it up now, because in 2007, Nascar will be on Sirius.

I have them both and like both services. Music on Sirius sounds better
and they don't have all the promos like XM has on their music channels.
XM is a bit easier to get indoors.  Sirius has better sports, but XM has

```
baseball.  Nascar going to Sirius in 2007. Sirius boomboxes sound much
better. In all cases, sat radio in the car is SO MUCH BETTER than
regular old AM and FM. Also, now that the price is the same (XM just
raised their price to match Sirius, you can't go wrong with either service.

The US general public "never" listened to short wave in the 1950s.
99.99% of the radios sold didn't have it.

HUGE SNIP

> And back to satellite radio? Are you kidding, Howard
> Stern? You don't think that people are going to go out and actually spend a

What kind of "expert" is this who thinks you need a dish to receive
satellite radio? Has he been in a store to price sat radio equipment?

But some of his dire predictions seem reasonable to me.

==============================
The HORRIBLE thing, is that dvdputz is correct for the first time.
Several Seattle stations are broadcasting in "high definition" also:

http://www.king.org/hdradio/
http://www.ibiquity.com/hdradio/
http://www.simplebits.com/notebook/2005/02/20/hdradio.html
http://www.wfuv.org/wfuv/digitalradio.html

I think his being correct, however, is just an accident.

The Low-Power AM station hobby has become more popular over the past 2
years.
In the U.S, it is legal to broadcast over the AM band 540kHz-1700kHz
using a 3
meter antenna and a 100mW transmitter.
Until recently, building a small AM radio station was very complicated
and very expensive, until now.
Using a SSTRAN AMT-3000 transmitter, which comes as a kit for under
$100.00US, or a built version which comes assembled and tested for under
$200.00 US, and a 3 meter, coil loaded and tunable antenna for around
$225.00 US, anyone can get on the air right now!
I get questions about range: the system I am describing has had reports
from 1/2 mile to over 4 miles! Range totally depends on these factors:
location, scope of the land, conductivity, choice of
frequency/adjacencies, and use of this antenna.
If the transmitter and antenna are installed correctly in a proper area,
several miles are possible. Many people are interested in a good, solid
local signal and this system does it for a fraction of the amount of
money you will spend for a comparable system.
If you are interested in low power AM Broadcasting, I invite you to

visit this site:
http://antenna18431.tripod.com/antenna.htm
In this site you will find information on the 3 meter antenna, pictures
of it, information and pictures of the transmitter and a link to email
questions, comments and inquiries to.
If you would like to be on the air, this is an excellent choice to do it
well, and at a very affordable price!

If you mean AM radio, and if you mean in the daytime, a passive MW loop
next to the radio lets you receive (in Ohio) 17 different broadcasts of

Limbaugh on a typical radio.

It doesn't help much at night unless you have a really really bad radio.

I'm interested in real results between this two antennas, urban area, same power,  same high  etc. Running circular we have only 50% of power, compared to normal dipole, but there are many positive feedbacks about circular polarization in urban area!

Is this really true?

The real estate could be used for many things besides a resort.
In the Caribbean, due to the limited amount of land -- land costs will
always be higher.

Not all resorts have to be on the beach, in Fiji many are not.

If a multinational company is interested, a higher price may occur during
the land sale.

| polarization in urban area!

| Is this really true?

In a manner of speaking, yes, it's true.  The reason why you have 1/2 the power that you would with a straight dipole is because half the power transferred goes into the other polarisation (10kW ERP = 5kW Horiz + 5 kW Vert).  And the reason why one uses vertical polarisation is for the number of automobile receivers that have vertically-oriented antennas.  But, other than that (with one exception which I'll cover presently) there's no good reason why you'd run C-pol.  For the rare individual who has a C-pol receiving antenna, (s)he'd be picking up both polarisations, and therefore get 3dB better signal-to-noise....but in an urban area, that effort is for naught, since there's already plenty of RF, and twice more than plenty is still more than plenty.  For the rest of those using dipoles in random orientations, they're just as susceptible to multipath, fading, and other propagation effects that would be experienced with a single polarisation.  Still, there's some value in this since it wouldn't make any difference which orientation a simple dipole was in, if it had a C-pol signal to work with.

I did extensive empirical testing in Quito, Ecuador in the mid 60's on HCTM1, using both horizontal and vertical polarization. I ended up with only vertical, which reduced the multipath from the reflection of the hills and mountains considerably. At that time, HCTM1, 95.1, was the only FM on the air in that city of 700,000 lying in a valley in the Andes, so it was a good test of signal. Since we were the only FM for about 1000 miles around, we could do pretty much whatever we wanted.

>From music to talk, broadcasters reach out to listeners who have computer connections.
By Susan Whitall / The Detroit News

Detroit radio stations are jumping on the Internet streaming bandwagon -- or jumping back on -- faster than weeds grow in April.

"Streaming" is a continuous online audio feed that you can listen to on your computer.

Expect more stations to go online every day, as industry giants Clear Channel and Infinity have both hinted that they're going full-bore ahead into the Internet world.

. Classic rock WCSX-FM (104.3) relaunched its Webstream Friday at wcsx.com, after shutting it down three and a half years ago.

"We'd been hearing from people who worked inside the Ren Cen and couldn't pick up the signal," WCSX operations manager Bill Stedman says. "Now they'll be able to listen at their computers."

Greater Media's WRIF-FM has been streaming morning hosts Drew and Mike and all its shows all along.

. For talk and news-talk stations, streaming has been less of a headache because they have mostly background music to license. Salem Broadcasting's conservative talk WDTK-AM (1400) has been streaming its shows online for some time. Progressive talk WDTW-AM (1310) streams most of its content and promises its morning show will be up soon.

. This past Valentine's Day, news-talk WJR-AM (760) started putting its programs up live on the Internet. WJR is streaming all of its programming except for Rush Limbaugh, Dr. Laura, Dr. Dean Edell, Matt Drudge and Ann Delisi.

President and general manager Mike Fezzey says the station is already getting a lot of calls outside its geographical reach. "Any opportunity to extend the brand and allow people to listen to us where they haven't been able to before is a good thing," Fezzey says. "There are people traveling who want to stay in touch, people who might go to a winter home in Florida or Arizona. Some people have a radio, but it's just easier to listen online if you're at the computer."

. This past Monday, all-news WWJ-AM (950) was among many Infinity stations nationally to start streaming as well. Rich Homberg, vice president and general manager for WWJ, is excited about throwing the station's "live and local" programming up online. Now anyone around the globe with a computer can hear all news all the time, including Joe Donovan's 20/20 News-style alliteration, updates on freeway closures and the latest on Detroit politics and Hines Drive flooding.

"Streaming is just another way that we're moving from a 'we' world to a 'me' world," Homberg says. "We want to move onto the devices of the future, whether that's computers or iPods. That's where the world is going, and we know it's important for us to be there."

Homberg envisions a time in the near future when an individualized WWJ broadcast will be downloaded onto your car radio, podcast-style, while it sits in the garage overnight.

WWJ doesn't rely heavily on syndicated content, and Homberg believes that will work in its favor online.

"There seems to be this rumor out there that the Internet will hurt radio," Homberg says. "But if you give people compelling local content, they'll listen. You can't be generic, though. If 15 hours of my (programming) day were network radio, I'd be concerned."

For FM, yes, circular polarization is a very good thing.  Part of it is because the antenna orientation no longer matters; your listener can have a vertical whip in a car or a horizontal dipole and still get good reception.

In addition there are some serious benefits in reduced multipath, many of which really only apply if the listener has a circularly polarized receive antenna, but some of which are of benefit even with a whip.

>Is this really true?

Yes.  Pretty much everyone today is running some sort of circular polarization. The real difference is in the antenna patterns and how low the angle of radiation is.  You don't want to waste your signal by sending it out into space or into the ground.

There are several reasons why low power AM broadcasting is important, Bob.

First off, if you do live in a small town or community, it surely can pay you to sell advertising or announcements.  It is being done now.

Second, if you offer a format or service no one else in the area is offering, your little investment could turn into a profitable part time job.

But thirdly, there are those out there that either wanted to work at a radio station or would love to own one, and there aren't too many people who can afford that.

It's an opportunity, but if you aren't interested, why did you bother to post?

Dan Milmo, media business correspondent
Monday March 7, 2005
The Guardian

Channel 4 will confirm today that it has made its first move into radio by acquiring a 51% stake in Oneword, the national digital station.

The broadcaster has agreed to buy the shareholding from UBC Media, the owner of digital station Classic Gold and Britain's largest independent production company in the radio sector.

The station will not be rebranded with the Channel 4 name, however, or broadcast formats adapted from series such as Big Brother or the Friday Night Project.
UBC took control of Oneword last year by acquiring the 50% of the station it did not already own for �740,000 in shares.

It is understood that Channel 4 is paying a premium to the price paid by UBC. Channel 4 and UBC began talks on collaborating over Oneword last year and the companies signed a development deal in August.

At one stage it was planned that Oneword would be rebranded as Channel 4 radio and be relaunched as a talk station aimed at Channel 4's key demographic of 18 to 34 year-olds.

Andy Duncan, Channel 4's chief executive, said the broadcaster had no plans to rebrand Oneword or repackage existing Channel 4 formats for radio.

"As we move towards a fully digital and converged world, we are actively exploring opportunities that exist across all digital platforms and UBC Media will be a valuable partner to help us further explore the sector," he added.

Oneword programming includes serialisations of books, play readings and Between the Lines, a radio book club.

Its schedule this month includes Thomas Hardy's the Woodlanders and A Midsummer Night's Dream.

The station has existing slots on the national digital radio multiplex, Digital One, and on Freeview, SkyDigtal and cable.

Oneword's audience has nearly doubled over the past year to 112,000, but UBC has complained that the launch of BBC7, a station with a similar format to Oneword's, has limited its growth.

Michael Hodgson, the head of corporate development at Channel 4, said the deal would allow the broadcaster to launch its own branded station in the future.
"This is a very strategic asset to hold," he said.

"The market will continue to develop and we have that capacity if we decide to launch something along the lines of Channel 4 radio."

Ofcom, the regulator of the UK's television and radio industries, last month urged Channel 4 to pursue "further operational efficiencies and market-based initiatives" as the broadcaster seeks to plug a projected �100m gap in its funding.

I'm going to put DAB radios in all my many vehicles. I can't put up with FM, with its constant fading, now I've heard DAB. FM also seems very restricted for choice, with no means of hearing Radio 7 and One Word.

Bill

> 1. Chevrolet Lacettis are rare in the UK
> 2. DAB is an OPTION, not standard
> 3. DAB is not becoming standard in cars
> 4. You're a knobhead
> 5. Go away.

ack that's a little unfair. It's a obvious option for manufactures,
but unit prices keep it in the �option' or �accessory' bin at the
moment, not the fact that it's dab. I have dab in my car and I have to
admit it was night and day when comparing it to my pants factory
fitted fm radio. I'd never go back to an in car fm unit.

quick google around and here's what's going on � without telling you
you're a �knobhead'

opel throughout europe and vauxhall in the uk has added dab as a
factory-fitted option to the newly designed audio system in the new
astra. all opel\ vauxhall brands will be optioning dab across europe
by sept 2004

gm daewoo's lacetti, has dab as a price-listed option � we knew that one.

tvr offers dab as a factory fit across its entire range, with standard fit on the tuscan s � but then the tuscan is a wankers car :)

rover and mg dealerships in the uk are offering DAB digital radio as an accessory.

the new lotus elise 111R has dab digital radio as a factory fitted option.

fiat dealerships offer dab as an accessory.

David, I disagree I worked at KMPC for 22 years we had the best news dept in Los Angeles now it's KFI. The hard news on the hour and half hour also breaking news coverage IMHO is the best. From your comments you don't like KFI, use the "on" and "off" button. I have nothing to do with KFI, as a former air talent, Vice President of Gene Autry's GWB,owner of KMPC, KSFO, KVI, KEX, and owner of radio stations my views are not personal. KFI is far from being stale and old fashion sounding. RE: 1260, you have to be kidding. Are you in broadcasting?? David, I repeat nothing personal, just disagree. Also, don't know her. Terri Raye Elmer KFI, one of the best newscasters in LA.

Can that be right?  If we assume his career was 40 years, that means he must
have interviewed 250 people every single year.  I don't recall many
interviews during his stint at Radio 1 (although I could be wrong) so he
must have been really cramming them in in later years.

Actually, it is 25 kw with a top-loaded 1/8 wave vertical. There is no "nice" antenna anymore.

I would suggest that it is very widely accepted that Mike Terry is
undoubtedly a knobhead.

You try to make out that you're oh so into audio, and oh so knowledgable about audio, so why is it when you come to radio you seem to be incredibly backward?

You wouldn't dream of expecting radio to sound good. Why? And don't you have an FM tuner at home? If so, have you never turned on Radio 3?

And now you're trying to suggest that DAB sounds better than FM in cars, just because you replaced your shitty factory-fitted FM car stereo? And the same argument went for when you replaced your malfunctioning FM portable (that you could hear taxis on, which shows it wasn't even fking working properly) with a ghastly The Bug portable and you seem to suggest DAB is better.

Pal, whatever your name actually is, you don't know WTF you're going on about.

My Sony ICF703L FM portable sounds miles better than my Evoke-1.
My Pioneer DEH-P77MP CD/MP3/FM car stereo with DSP-enhanced FM tuner sounds the dog's bollocks, and the FM bit WILL wipe the floor with DAB.
End of story.

Well I found this on Radio Magazine
http://beradio.com/searchresults/?terms=KFI&ord=d

KFI Tower Felled by Plane Crash
La Mirada, CA - Dec 19, 2004 - The Associated Press reports that a
private plane crashed into the tower of KFI-AM at 9:45 a.m. on Dec. 19.
The single-engine Cessna 182 brought the 760' tower down. The two people
on the plane were killed. Their identities have not yet been released.

 The plane was en route to Fullerton Airport from El Monte when it
crashed. Fullerton airport is about one mile from the tower site. The
FAA reports that the pilot did not issue any distress reports.

 KFI's tower has resisted earthquakes and a brush with a private plane
once before. The tower survived the previous air incident. The tower's
```

guy wires were replaced in March 2004 after 47 years of use.

KFI reports that the station was off the air for about an hour before switching to an auxiliary tower at the same site at about 5kW. The station is licensed for 50kW into the main antenna.

I have heard them claim 50kW in the past and I thought 640 was one of the old "clear channels."

Did they reduce power after putting up a new antenna?

It's wall to wall misdirection.  Michael Jackson and Robert Blake are not news.  I am not a fan of explosions and heavy metal stingers.
It's all sizzle and no steak.

David,

What Roger may not want to say, I will: GWB, while Roger was there, was one of the absolute finest radio companies in America if not the entire world. Service, responsibility, strong, live personalities, localism, high technical standards, decent treatment of the staff and general responsible business practices while making a profit.

Those of us still in radio would be honored to be considered to be in the same league as Roger.

Because of this, if roger says it, it is likely 99.9% correct. And that goes for his latest post.

He had a daily show on BFBS for many years, very similar in format to
R2s JW Drivetime.

When did they reduce power? Everything I check still shows them at 50 kW,
including the FCC data.

Ok so its not then. It's a statement made by someone who clearly has a
burgeoning psychosis when it come to radios. How's that?

Oh perrrlease Mr Psychosis man! In what way have I tried to make that
out, and in what way can someone be �backward' over the subject of a
radio??

>

A radio is certainly not my preferred choice of playback if I'm in one
of my geeky audio moments, no - and I think that's a fair statement. A
quality LSO recording, played on my Cirrus player through my Naims and
onto my MF5's will forever be a better listening experience than going
through the rigmoral of getting a tuner to bleat out a radio 3
rendition of the same recording. If you need me to explain why this
happens little person, then I will, but then again I probably won't
waste my time because you already know..... don't you?
Don't for one minute think that your incessant drivel regarding the
audio differences between a 99 quid dab portable and an fm tuner will
sell me the theory that fm is a audiophile choice of listening gear.
It's not. End of.... and start thinking about getting something that
resembles a life as well.

>
> Pal, whatever your name actually is, you don't know WTF you're going on

Apparently so. I've clearly been missing the wonderful secret world of the radio audiophile. My god, somebody kill me.

> End of story.
>

If you can tell me that your little fm car radio, played through your Nissan Micra's factory fit speakers is head up a better listening experience than a DAB counterpart � you've got some growing to do Mr Psychosis man. My enjoyment of having a DAB radio in my car extends as far as being able to kick in some DRC when I'm a 90mph and deaf from tyres on concrete, and the fact that I have a little more staion choice and �uninterrupted' playback. That is about how far an analysis of 'normal use' in-car audio can go.

>

You've got to read threads before answering them, otherwise you run the risk of coming across as a lost cause.
Here's what I said �again' when on the subject of DAB radios's in cars.

<ahem - clears throat> It's a obvious option for manufactures, but unit prices keep it in the 'option' or 'accessory' bin at the moment, not the fact that it's dab.

How was that? Did you get it that time? I haven't once said that it is standard or even will become standard � just that it's not standard because of it's price point at the moment. The future will show us whether DAB will become an in car standard. As and when the dab price point falls to an appropriate level, I'll chance the fact that it very much will � but only when the price is right.

Why do you think it will not become standard in cars?

> > gm daewoo's lacetti, has dab as a price-listed option - we knew that

There's some enormous hash signal 10 kHz above and below WTPG 1230
Columbus (aka. WCOL 1230 and WFII 1230) today, wiping out WHIZ 1240
Zanesville, which is Columbus's finest radio station.
```

Its daytime contours include Columbus on the map, too.

If I (directionally) deep-null away the hash, it also nulls away WTPG, so WTPG
is extremely likely to be the source.

Deep nulls are very very narrow, so odds are correspondingly high.

It still is a clear channel. However, they have not been able to rebuiled
the fallen tower and are still using the aux, but with hihger power than the
first few hours.
>
> Did they reduce power after putting up a new antenna?

The 1/8 wave antenna was the auxiliary tower, used when the 1/2 wave one was
being maintained. There has been no replacement or new tower built.

Yeah, sumbuddy, thanks for your attempts to help and for stating the
obvious, but I think he's already perused the NYT site...without much luck.

If you could point to the article more specifically, it'd be more help.

Why don't you two get a room at the Dinosaur Hideaway?

KFI is not KMPC.  It is a WOAI clone.  It is annoying to listen to.
It is classless.  The only reason they're #1 is the rest of the
audience is too fragmented.

For good sounding News/Talker try 810.

I'm trying to record radio being played via RealPlayer, but when I use the software OPD2d, it will save a file, but when I try to play the file I get this message from RealPlayer

This clip cannot be played, it contains unexpected data may be corrupt.

I've tried a few times.

I have the latest version of all software, and am using Xp.

Any clues on how I can solve this?

thanks

T

If anybody wants to read about KFI, there's a big cover story article
about inside the talk radio biz in the new (April 2005) issue of
Atlantic Monthly, featuring the nightime guy there.

Trivia, KFI originally stood for "Farm Information".

Hi--
I am looking for airchecks  from WCFL Radio in Chicago from the 1960's
era.
And maybe some of the Eddie Schwartz late night radio show from either
WIND or WGN.
I do have some Chicago radio shows to trade.Haven't made up a list but
can if requested.
Email me if interested
DC in Florida

It changed when KFI's main tower was knocked down by an airplane
earlier this year.  The incident was widely reported at the time.

They lost the tower in an aircraft collision. They are running an existing
auxiliary tower in a nonconforming operation until such time as the
half-waver can be rebuilt at the current site or a new site found.

I'm listening to the radio right now. Why would I have psychosis about
radios, let alone a burgeoning one??
```

Here's something you've said earlier:

"the fact of
the matter is if i want to listen to quality audio on my rig i
wouldn't attempt to do that with a radio of any sort"

There is no reason why radio should not be of decent quality.

>> You wouldn't dream of expecting radio to sound good. Why? And don't

Sure, but I fail to see why you stick up for the level of quality that
is used on DAB in the UK. They could easily provide higher bit rates to
provide higher audio quality. That's all I want, so why are you against
that?

> If you need me to explain why this

> sell me the theory that fm is a audiophile choice of listening gear.

I'm not saying that FM can get anywhere near the level of expensive
hi-fi separates, but if you're suggesting that your The Bug sounds
anywhere near as good as a Denon TU260 (�90-�100) FM tuner then you're
living in cloud cuckoo land.

> It's not. End of.... and start thinking about getting something that

>>
>
> If you can tell me that your little fm car radio, played through your
> Nissan Micra's factory fit speakers

I wouldn't buy a Nissan Micra and I always replace factory-fitted
speakers.

> is head up a better listening
> experience than a DAB counterpart

I guarantee that FM on my car stereo sounds far and above better than
DAB would. Here's my car stereo:

http://www.pioneer.co.uk/uk/product_detail.jsp?product_id=3176&taxonomy_id=25-121

it sounds great on FM. And FM reception is "DSP-enhanced". I'll spare you the details, because you won't understand them, but suffice it to say that it works very well indeed.

> - you've got some growing to do Mr
> Psychosis man.

Eh?

> My enjoyment of having a DAB radio in my car extends as
> far as being able to kick in some DRC when I'm a 90mph and deaf from
> tyres on concrete,

Deaf from tyres on concrete? Do you drive with all your windows open?

If you cannot turn the volume up on your car stereo to mask the vast majority of the road noise then your car stereo isn't powerful enough.

> and the fact that I have a little more staion
> choice and 'uninterrupted' playback. That is about how far an analysis
> of 'normal use' in-car audio can go.

But that's just the same as you being told by a micro hi-fi system owner saying "paying anything more than �200 on a hi-fi system is wasted money". It's his prerogative to think that way, but it shouldn't mean that everybody should think the way he does, and that's exactly the same thing as what is going on here; you're telling me what requirements I should have for my radio consumption, and I'm telling you that my requirements are not going to be dictated by you or anybody else.

Looking at the makes of your hi-fi separates then I'd expect your hi-fi system cost far more than mine (my separates are in the �200 per device range), but I would not dream of telling you that you've wasted your money or that you shouldn't require your audio to be at such a high level. Yet you are trying to tell me what quality I should accept. Sorry, but you haven't got and never will have that right.

I've read lots of reports of DAB in cars not sounding anywhere near as good as FM does. Here's 2:

http://tinyurl.com/5byfb

"You are correct FM does sound better, on some music much, much better,
sorry
I'm not an audiophile so I'll limit myself to saying that music (Radio

2) is
much flatter on DAB than on FM."

And the person that said this had previously stated that DAB sounds better than FM in cars, but hadn't even compared the two! This is very typical, because people just assume DAB will sound better, but don't even bother to compare.

http://www.digitalradiotech.co.uk/goodmans_gce7007_review.htm

"DAB really doesn't sound better than FM."

>>> quick google around and here's what's going on - without telling you
>>> you're a 'knobhead'
>>>
>>> opel throughout europe and vauxhall in the uk has added dab as a
>>> factory-fitted option to the newly designed audio system in the new

> not the fact that it's dab.
>
> How was that? Did you get it that time?

Don't try and patronise me, it doesn't work.

My sole issue is with Mike Terry's choice of thread title:

"Digital becoming standard in cars"

It is not becoming standard in cars. How difficult is that to understand? DAB will only be standard in cars when it is factory-fitted in a relatively large proportion of all cars manufactured, and up to now I think there's only one type of Vauxhall Astra that has DAB factory-fitted, and otherwise it's an optional extra.

> I haven't once said that it is
> standard or even will become standard

So why the fk did you stick your oar in? I don't need a lesson from someone that knows far less than I do about the current state of the DAB in-car market, thanks.

> - just that it's not standard
> because of it's price point at the moment. The future will show us
> whether DAB will become an in car standard. As and when the dab price
> point falls to an appropriate level, I'll chance the fact that it very
> much will - but only when the price is right.

It's bound to eventually, because the incompetent broadcastes have already nailed their sail to the DAB mast, but to suggest that "Digital [is] becoming standard in cars" is about as wrong as you can get.

> Why do you think it will not become standard in cars?

Scuse me? It will *eventually become* standard in cars, but to suggest that it is "becoming standard in cars" is analogous to suggesting that HDTV is becoming the standard way that people watch TV just because a tiny, tiny fraction of the general public has a set-top box that is capable of receiving Euro1080 (a European HDTV broadcaster on digital satellite) and occasionally watches HDTV. HDTV will become the standard way that people watch TV, but that's a decade or two away, so it is totally wrong to suggest that HDTV is becoming the way that people watch TV.

God almighty, some of the fking things I have to justify! There really are far too many buffoons on Usenet.

That is why I am in the Hispanic sector and in Latin America. Recently did a project with a news-talk in Argentina, where the morning news and information show has 47 staffers... including a staff comedian who does hourly parodies!

In the US, nearly all Hispanic stations are live and local, know that community service actually gets ratings, and where radio is still a profession.

I recall visiting KSFO in about 1961 as a teen and remembering that it was filled with courteous people who actually thought it was significant that a 13-year-old would visit them. today, stations have to have metal detectors to keep criminals out!

I look forward to more of your postings here.

accomplishments, please.
>
> KFI is not KMPC.  It is a WOAI clone.  It is annoying to listen to.
> It is classless.  The only reason they're #1 is the rest of the
> audience is too fragmented.

And news talk is NOT fragmented? 570, 710, 640, 790, 830, 870, 980, 1070,
1020, 99.5, KLSX, 1330, 1150 and 1540 are all talk stations in some form.
That is 14 stations in that format. That KFI has nearly a 5 share shows they
are focusing on what the market wants.
>
> For good sounding News/Talker try 810.

KGO is great... for San Francisco. KFI is a good news source, has a
significant quotient of local talent, like Handel, and is beautifully imaged
and produced by Robin. It is as good as they come, especially in the local
news coverage.

Sounds like IBOC ("HD Radio"). See the spectrum plot on
http://www.wor710.com/Engineering/iboc/installation_pictures.htm .

It should go away at 6pm or sunset, whichever is later.

It's my understanding that WTPG is in fact running IBOC.

Pedant alert:

Calling WHIZ 1240 Zanesville "Columbus's finest radio station" is much like, in my neck of the woods, calling KIXW 960 "Los Angeles's finest radio station."

KIXW is a Victorville station, 65 miles northeast of Los Angeles as the crow flies.

IIRC, Zanesville is roughly the same distance east of Columbus.

This concludes your Pedant alert for Thursday, March 10th. :)

Can't help you with that program Tony, but I have used Total Recorder to
to record various streams without a problem.  I record one program a
week which is a "real audio" stream and archive it to CD-R and it's been
OK every time I've done it.

It puts in a good signal, and it has about the only music I can stand to listen to
for long in the background; and gives you Limbaugh an hour before the wretched
WTVN 610 with its eternal echo chamber on every show.

Perhaps only a good signal if you live in the direction of Zanesville from
Columbus,
I don't know.  It's wiped out by WTPG now, whatever else it is.  I wonder why
WHIZ puts up withbeing obliterated by Clear Channel; it's their frequency, after
all.

Unless you have the world's best MW antenna array of course.  I can null anybody,
and sometimes even two anybodies at once, with stable signals (eg. daytime).

Hi. I'm doing a weekly chat show. You can hear it at
www.unitedkingdomtalk.co.uk   OR  you can find it on my website. Go to
the "Radio Shows" section of  www.chrisreardon.co.uk  It's in three 19
minute parts. The show is uploaded and changed every Saturday.If you
are a net or other radio station that would like to use the show, if
you think it's good enough, please do so. You do not need my
permission to do this, although I would appreciate it if you let me
know if you are using it and where and when.
Thanks.
Chris

Daily Radio Show Mon - Fri 4pm - 5pm UK Time at
www.offshoremusicradio.com

Weekly talk show playing continually at :
www.unitedkingdomtalk.co.uk

COMING IN APRIL -- Brand new twice weekly 2 hour show featuring dance
floor classics of
today and the future on the new Europewide station  WWW.RTI.FM
See my website for this and other details :
www.chrisreardon.co.uk
www.chrisreardon.co.uk
Daily Net Radio Show
Monday - Friday 4pm - 5pm UK TIME
at  www.offshoremusicradio.com

For the OP, calling a distant station an area's "finest" radio station
means it carries the Don Imus show. :)

 "David Eduardo" <amdavid@pacbell.com> wrote:

> > For good sounding News/Talker try 810.
>
> KGO is great... for San Francisco. KFI is a good news source, has a significant quotient of local talent, like Handel, and is beautifully imaged and produced by Robin. It is as good as they come, especially in the local news coverage.

I can't stand listening to Bill Handel. He sounds like he is spitting all over the microphone and desk when excited and I have heard enough dumb things come out of that guys mouth to last a lifetime. The radio personalities at KFI must carry their own microphone covers with them.

I have the car radio buttons on KGO 600, KFI 640, KABC 790,KNX 1070, KVEN 1520. I also listen to KGO 810 in the evening hours where they sound like a local station any night. I listen to the news on these stations and the most time. I listen to some of the personalities like Hannity during lunch time or John and Ken on the drive home but my preference at that time is Al Rantel on KABC.

The only personality I care for on KGO is Dr. Bill Wattenburg keeping in mind that I only hear KGO evenings.

Other than that the radio in the car is on a classical music station. Only one left 105.1 K-Mozart along with the public service stations.

We are open 24/7. Pedants are always welcome, as long as they conform to the dress code.

(It is reaching to call a 60-mile distant Class 4 a Columbus station, especially since there is a 1230 in Columbus...)

Most entertainment was not designed for lasting value. Dickens was paid by the word to pad stories and draw them out to increase circulation, and Shakespeare was considered "vulgar" by the ruling classes. They both provided entertainments, and, in retrospect, we found them enduring as well. Much of the best writing of that period is totally forgotten and irrelevant. Don't be so hasty to dismiss the simple act of providing enjoyment and entertainment.

In 1940 Winston Churchill established clandestine war - the SOE - to "set Europe ablaze". On this 60th anniversary of the war ending, Ralph Barrett, G2FQS, describes the courage, activities and apparatus of SOE agents in enemy territory. Because of monitoring, wireless operators were in particular danger. His presentation takes place at 12.00 noon on Saturday.

5 March at Station X, Bletchley Park, 50 miles from London. A live radio transmission will be demonstrated using SOE equipment. There is no charge for the lecture but there is an admission charge to Station X, which is open from 10.30am to 5.00pm. A guided tour is included. It is not necessary to book tickets in advance.

As part of its policy meeting on Monday, the BCI considered a range of key issues in deciding whether to licence additional commercial radio services at this time. These included the report on the impact of the south-east regional service Beat 102-103 FM on the region as a whole and on the local services in the area. This was viewed positively.
Also discussed was the Ox report which suggested that the number of services was generally restricted and that there was greater potential for additional services, particularly in areas served by just one local station.

The BCI Strategic Plan 2004-2008 was also considered. Under this plan the BCI is committed to meeting the diverse entertainment, education and information needs of the people of Ireland while making effective use of a national resource. One of the Commission's goals is to maximise the number of broadcasting services of Irish origin or licenced in Ireland. Specifically the Commission has provided a commitment to review the licensing policy in respect of different types of services.

The increased availability of spectrum was also discussed by the BCI. Work undertaken by the Engineering Division, in conjunction with ComReg, will allow the BCI to offer additional radio services throughout the country on AM and FM.

The BCI also noted that the substantial workload involved in the re-advertisement of local radio licences has now concluded, and finally discussed was the commitment to review the BCI's policy of Ownership and Control.

In considering all of the above, the Commission agreed in principle that the licensing of additional services should be progressed at this time.

The BCI have also decided that it would be appropriate that a formal written policy regarding the future development of services should now be put in place. No formal written policy exists to date, although the BCI's licensing policy has centred around three key principles - diversity; use of spectrum; and viability - all of which have their origins in the 1988 Radio and Television Act. The new revised written policy will continue to reflect these principles but in the context of a changed broadcasting environment. The BCI feels that the sector is now more robust and that the issue of viability might now be more balanced with the need to ensure diversity. The increased availability of spectrum may place a different emphasis on this principle where an efficient frequency plan with known transmission sites and coverage areas can be matched effectively with expressions of interest received.

The BCI announced its intentions at a media briefing at their headquarters yesterday afternoon.

Irish Music Radio, formerly Radio Dublin, will return to the capital's airwaves later this year. The station's management team sought, and has been granted, a second thirty day Temporary Broadcasting Contract from the BCI. Live programmes will commence at twelve midnight on Friday 17th of June and the station will be on air each weekend up to and including the weekend of September 24th.

Speaking shortly after confirmation of the licence the Chairman of Irish Music Radio Damien Farrell said: "This is a very important step for the station. The awarding of a second temporary licence indicates to us that the Commission is interested in what the station has to offer to the present Dublin radio market".

Managing director Joe Doyle also commented on the awarding of a second licence: "Following the announcement by the BCI today I feel very confident about the future. I believe that the Commission now realises that stations such as Irish Music Radio and Premier FM have a place in the market and I welcome the Commission's announcement today that they plan to introduce new stations in Dublin over the next three years."

Joe continued: "This second licence is to us a vindication of our decision to seek legal status and to enter into temporary contracts with the BCI."

Irish Music Radio will transmit on 94.9MHz FM from Three Rock Mountain and programming will come from studios in Clondalkin, south-west Dublin.

Here's one from my hometown:

The battle is on for the chance to launch a new radio station in Dorset and the surrounding areas. A Bournemouth-based Christian radio service, a student union station and a talk station led by Fred Dinenage are among those bidding for the chance of a permanent licence.

Bournemouth's Young Men's Christian Aid's broadcasting arm Hope FM has been transmitting its message in two 28-day broadcasts a year for more than a decade.

Its community-based programmes include music, interviews, topical discussions, special guests and slots for thought of the day.

But now the radio station is going head-to head with at least 13 other radio stations from across the South West, including Bournemouth University's student union's Nerve Radio, in its bid to win a community radio licence.

If their application is successful Hope FM will have licence to broadcast across Bournemouth and Poole all year round for up to five years.

Station manager Kevin Mwachiro said: "It's really exciting for us. It's a local station, run by local people, giving them a great opportunity to get involved in the community."

Mr Mwachiro explained that in its application Hope FM had to demonstrate to Ofcom, the communications industry regulator, that there is enough demand for the radio station.

Meanwhile, Meridian TV presenter Fred Dinenage is leading a bid by The Wireless Group to launch a new talk radio station in the Solent area.

Ofcom has put the Solent area FM licence, which covers 1,250,000 people across south Hampshire, east Dorset and the Isle of Wight, up for grabs and it has attracted interest from 12 other radio stations.

But The Wireless Group hopes to convince Ofcom its allTALK FM interactive speech-based station, which will specialise in talk shows, can offer something a little different.

"A speech station would be something entirely different but would complement the existing local and commercial radio stations currently broadcasting in the area," Mr Dinenage said.

"A local Solent speech radio station will appeal to a very broad spectrum of the region's listeners and will be highly relevant and compelling as it deals with the broad range of political, transport, health, schooling, local charitable, business, cultural and sporting issues."

The licence, which will run for 12 years, is expected to be on 106MHz FM. The outcome of the bidding process will be announced after the window for applications closes on May 5.

The group's business development director Piers Collins said: "There are quite enough music-led stations and I think we can offer listeners something new and exciting."

The Chicagoland Radio History web pages at
(check it out for just about anything in Chicago area
broadcast history)

http://www.angelfire.com/nm/negativfan/callhistory.html

give the answer to this question:
Quoting from their pages:
WSDM -- was on 97.9, "Smack Dab in the Middle" from the mid-60s to
1976, when the all-female ez/jazz station was thrown for a WLUP.
Presently the call is being used in Brazil, IN.

Charlie
the old engineer

Friday, February 25, 2005

A new pan-European radio station has announced its launch date as 9 April. The station, known, as RTI, says it will be broadcasting to over 40 million people on AM/FM in central Europe, to the remainder of Europe via satellite, and around the world on the internet. No details of frequencies have been announced so far, but there is a tentative schedule online. One of the Directors of RTI is Eric Wiltsher, who will be bringing his Media Zoo programme to the station.

RTI gives its address as 1 Northumberland Avenue, Trafalgar Square, London
WC2N 5BW, United Kingdom. E-mail: info@rti.fm.

Darned good listing.  Here are some more.

KTUC 'Tucson'.
KAIR old easy listening station.  'Drive with KAIR, Everywhere'.
KNST 'News Talk'.  They tried for KNSI for 'News Sports Information'
but those had been snapped up two weeks before by a station in
Minnesota for the same format.
KGVY 'Green Valley'.
KRQQ 'Rock'.  Goes by 'KRQ', often had promotions where listeners would
have to find the missing Q.
KWMT 'Mountain'.  Others I've heard of include KUMT Centerville Salt
Lake.  This one and the others before are all from Tucson at one time.

How about something hitting the fan?

KFNZ, KFFN, KFAN, and others.

KJQS 'Jocks', an all-Sports 'toilet' in Salt Lake.  Never shows up in
the arbs.
KJQN went by 'KJQ' until recently, now it stands for 'Jack' like in

Jack-FM.
KIQN 'KIQ' News, Information and TEchnology'. Station went bankrupt last year, now is KCPW AM, as an NPR/PRI/APM affiliate.

Stars: KSTJ, KSRR, multiple others.

KSOP. Just celebrated 50th anniversary, FM side was first country FM in the nation. Both are still country, same owner even. Stands for 'Salt lake, Ogden, Provo.

Magic: KBMG 'Magica 106.1' Evanston WY/Salt Lake (rimshot), supposedly goes on with a tropical/Spanish pop hybrid tomorrow. Others. KMGX (now KNST), KMGR, four stations in 17 years in Utah). KAMJ (now KZON). Plenty of these to be had.

'The Zone'. KZON, KZNS, others.

Old 'Z-Rock' heavy metal format: KTZR 'Tucson's Z-Rock'. Now belongs to Spanish hits station in Tucson.

WKRP anyone? We had a 'KRPN' that used a W before the official calls in the early nineties. Oddly, they simulcasted KZHT for a while. There were a few titters about the vulgar words you could also get out of those two. But yes, broadcasters did call KZHT 'K-Zit' for a while anyway. KZHT first appeared in 1989, and is still a CHR/Pop.

I wish I could be optimistic enough to bank on it. I'd like to see it happen, too. But every industry is ruined by people who have no real interest in the job at hand, and I don't see any precedent for a turnaround.
